SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety check before releasing the set to the customer:
Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microampers). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2 V AC range are suitable. (See Fig. A)

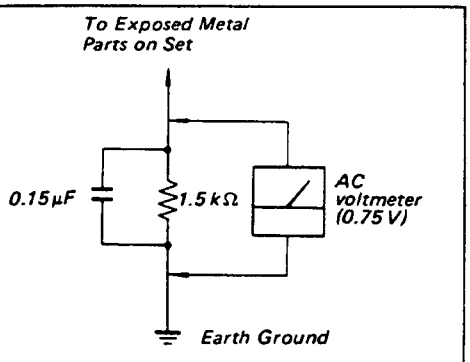

Fig. A. Using an AC voltmeter to check AC leakage.

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK ⚠ OR DOTTED LINE WITH MARK ⚠ ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

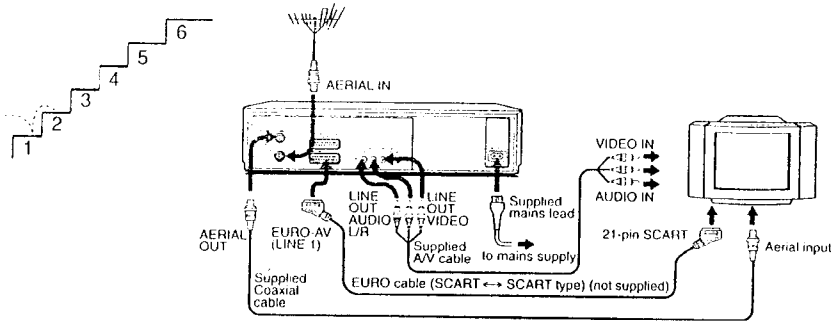
[36] JOG dial 9, 13

Note on the TV/VTR remote control selector
When you set the TV/VTR remote control selector on the Remote control to TV, the TV/VTR button cannot operate some Sony TV's.

Step 2 Connecting the VCR



1 Turn the VCR round so you can see the rear panel.

2 Disconnect the aerial input lead from your TV and connect it to the socket marked "AERIAL IN" on the rear of the VCR.

3 Connect the coaxial cable (supplied with the VCR) to the socket marked "AERIAL OUT" on the VCR and then plug it into the aerial input socket on your TV.

4 Check all connections and ensure they are firm.

5 Take the mains lead and plug it into the socket on the back of the VCR marked "AC IN". Then plug the other end into the mains supply.

Additional Connections

The hookup using the supplied coaxial cable shows the basic hookup to watch and record TV programmes. If your TV has a SCART connector, or the phono type audio/video input jacks, make additional connections. Additional connections can improve playback picture quality.

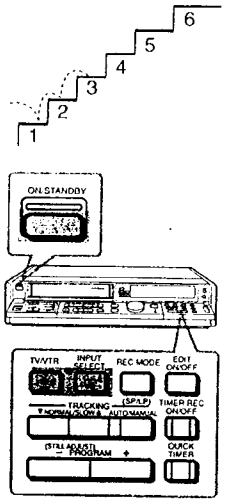
If your TV has a SCART connector: connect the EURO-AV connector of this VCR and 21-pin SCART connector on your TV, using the VMC-2121CE cable (SCART connector, not supplied).

If your TV has the phono type audio/video input jacks: connect the LINE OUT AUDIO/VIDEO jacks of this VCR and the AUDIO/VIDEO IN jacks of your TV, using the AV cable (supplied).

If you have made the VCR-TV connection using the LINE OUT AUDIO/VIDEO jacks, you can't use the on-screen information display.

Important
If you have made the VCR-TV connection using the EURO-AV connector, open the main MENU, move the arrow to "RF MODULATOR" and select "OFF". See "Customizing Your VCR" on page 40 for details.

Step 3 Tuning the VCR to Your TV



1 Having completed **Step 2**, press ON/STANDBY on the front of the VCR so that the green light above the button lights up. If you have made additional connections, skip **step 3**.

2 Press TV/VTR several times until "VTR" appears in the VCR display panel on the inside surface of the upper drop-down panel.

3 Press INPUT SELECT (on the inside surface of the upper drop-down panel of the VCR). Each time you press this, part of the display on the VCR will change. Keep pressing until "LINE L2" shows.

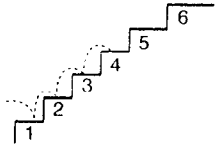
4 Turn on your TV and select a programme position that is not used to receive a TV station (in the UK, 0 or 9 perhaps).

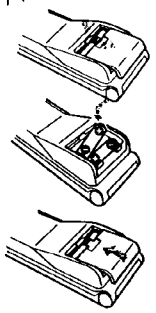
5 Tune the TV so that a blue screen with tape counter (0:00:00) is clearly displayed on the TV screen. (If you have difficulty, please refer to the instructions for tuning your TV.)

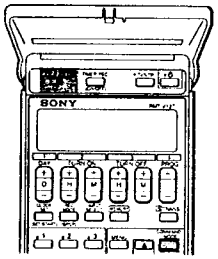
6 Press INPUT SELECT again, and keep pressing it until "TUNER" shows in the VCR display panel.

You have now tuned your TV to the VCR. Whenever you wish to receive the VCR's playback picture on the TV, turn to the TV programme position you have set for the VCR, switch on the VCR and press TV/VTR.

Step 4 Preparing the Remote Control





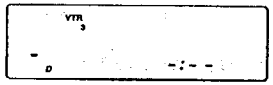


1 Take the remote control and turn it over so that the remote display cannot be seen.

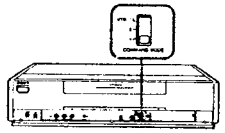
2 Slide and remove the cover.

3 Insert two R6 batteries.

4 Close the cover. Now you have "-D VTR 3 -:- -" in the remote display. If you don't, check the battery polarities and position the batteries correctly. Also check that "VTR 3" is shown in the remote display. If not, lift the flap of the remote control and press COMMAND MODE several times until the command mode display "VTR 3" is shown in the remote display.



5 Check that the COMMAND MODE 1/2/3 selector (inside the lower drop-down panel of the VCR) is positioned at "VTR 3." If not, slide the selector so that it is positioned at "VTR 3."



6 Set the TV/VTR remote control selector to "VTR."

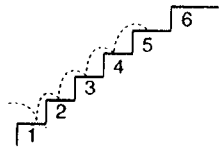
Notes on batteries

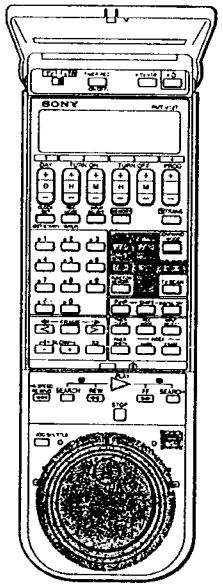
- Under normal operation, batteries last for about three months. If the remote control however, is not to be used for a long period, remove the batteries from the compartment to avoid possible damage from battery leakage.
- Do not use a new battery together with an old one.
- Do not use different types of batteries.

Note

When you insert the batteries into the remote control, the indication "VTR3" appears in the remote display. That tells you that the command mode setting of the remote control is set to "VTR3."

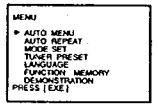
Step 5 Tuning the VCR to the Required Stations





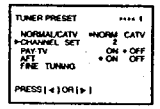
Now that you have the blue screen on your TV, you can tune the individual channels on your VCR to receive the required stations.

1 Lift the flap on the remote control, point the remote control at the VCR and press MENU. The following menu comes up.



If you want to use the different language that is now displayed on the screen, see page 12.

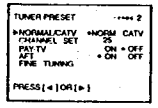
2 Using ▲ or ▼ of the cursor keys on the remote control, move the cursor (►) on the TV screen down to "TUNER PRESET", and then press EXE on the remote control. The menu shown at the right will appear on the TV screen:*



The screen display differs depending on the model.

- To SLV-825UB users: "NORMAL/CATV" does not appear on the TV screen of your model. Therefore, skip steps 3 and 4 below.
- "PAY-TV" appears on SLV-825VC models only.

3 **All except SLV-825UB models:** using ▲ or ▼ of the cursor keys on the remote control, move the cursor (►) on the TV screen up to "NORMAL/CATV." Then, move the dot to NORM using the left cursor key.

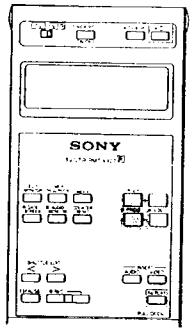


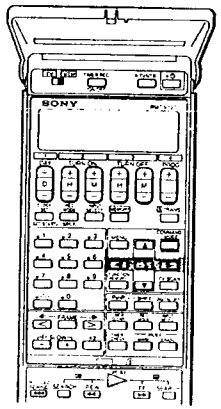
4 **All except SLV-825UB models:** using ▲ or ▼ of the cursor keys on the remote control, move the cursor (►) on the TV screen down to "CHANNEL SET."

5 Close the flap and press PROG +/– on the flap of the remote control or PROGRAM +/– on the inside surface of the upper drop-down panel of the VCR to select the programme position.**
The programme number will change in the VCR display panel and on the TV screen.

Another way to select the programme position is:
Press the PROG function button on the remote control to light the indicator beside the button and turn the jog dial clockwise for higher numbered programme position or counterclockwise for lower numbered programme positions.

(Continued)





If the received picture is unclear
Press ◄ or ► of the cursor keys on the remote control until you get a clearer picture.

6 Once you have selected the programme position, open the flap and tune to the channel required using ◄ and ► of the cursor keys on the remote control.
The channel number automatically increases with ► and decreases with ◄. (In Italy, channel numbers 13 to 20 correspond to channels A to H.)
The number stops changing when the first broadcast programme received is displayed; the programme will be displayed briefly before the screen turns blue again.

7 If this is the broadcast programme required*, press EXE to store it. If it is not, keep searching, i.e. go back to step 6.

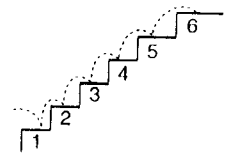
8 Now that you have stored a channel against your chosen programme number, go back to step 1 and repeat storing all the channels required against the different programme numbers.

*A faster way to store broadcast channels (say, if your area has a lot of broadcast channels) is to do the following alternative steps 7 and 8:

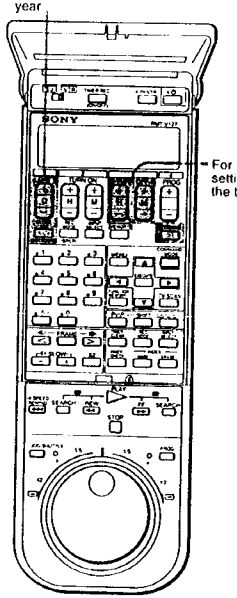
7 If this is the broadcast programme required, press PROG+ once (on the remote control) to automatically store it. To store the next broadcast channel, return to step 5.

8 Having stored all the broadcast channels against your chosen programme numbers, press EXE.

Step 6 Setting the Clock



For setting the day, month and year



For setting the time

When -:-- lights up in the VCR display panel
Any time power is interrupted for more than one hour, you will see -:-- lighted when power is restored. You will have to re-set the date and clock again.

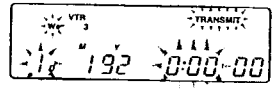
When a short beep sounds repeatedly
The VCR is in timer recording or quick timer recording or standby mode for timer recording, and the setting cannot be transmitted.

To correct the preset date and time
Open the remote control flap, repeat steps 2 to 7.

The last thing you need to do in Getting Started is set the clock on the remote control.

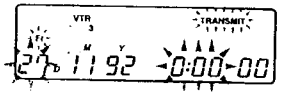
1 To do this, lift the remote control flap.

2 The items in the remote display flash to tell you that the remote control is ready to receive your clock setting data.



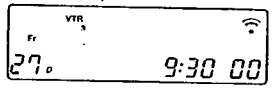
3 Press CLOCK SET.

4 Press the button marked "D" (top to go forward and bottom to go backwards) until today's day, date, month and year are indicated. Keep pressing the "D" button going through the dates, months and years until the correct data is set.
If you keep the "D" button pressed, the display will change more rapidly.



5 Press the H and M rocker buttons under the flashing "0:00" on the remote display. Use these buttons to set the correct time. Once done the correct date, month, year and time are all shown on the remote display.

6 When you are satisfied that all the information is correct, point the remote at the VCR and press TRANS at the exact time corresponding with a time signal from the accurate clock, radio, telephone and so on.
The clock will start at 00 second.
The correct time should appear in the display on the front of the VCR when the VCR is off.

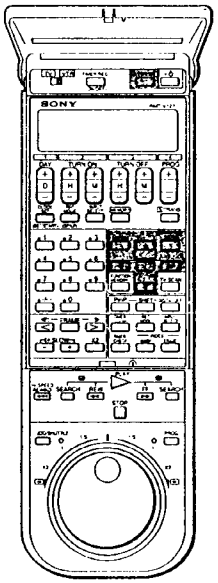


7 Close the remote control flap.

The following section "Additional Presetting Functions" describes various functions concerning setting up your VCR. Read through the section briefly to get to know the functions.

Now that you have finished all the things you should do in "Getting Started", you should proceed to "Basic Operations" to enjoy real home video life.

Additional Presetting Functions



Controlling Other Sony VCRs with This Remote Control

If the equipment has a command selector
Set the command mode selector to other position than "VTR 3", and press COMMAND MODE several times until the same command mode display as you have selected for the equipment is shown in the remote display.

If the equipment doesn't have a command selector
The command mode of this remote control should correspond to the settings listed below.

- If other equipment is a Sony Betamax infrared remote control VCR, select VTR 1.
- If other equipment is a Sony 8 mm format VCR, select VTR 2.
- If other equipment is a VHS format VCR, select a command mode position other than "VTR 3," which is selected for this VCR.

Selecting the Language on the MENU

Most of the operations are done using the on-screen display (MENU). You can also select the language you want to display on the TV screen. Once you have selected the language, you can use the on-screen display in your language.

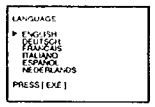
1 Turn on the TV and VCR.

2 Press TV/VTR on the remote control several times until "VTR" appears in the VCR display panel. (If you have made only an aerial connection, turn to the video channel you set the VCR to in **Step 3**.)

3 Lift the remote control flap.

4 Press MENU.
The main MENU appears on the TV screen.

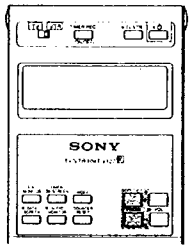
5 Move the cursor (▶) to "LANGUAGE".

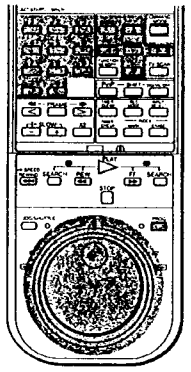


6 Press EXE.
The LANGUAGE menu appears.

7 Select the language which you want to use for the on-screen display, using ▲ or ▼ of the cursor keys on the remote control.

8 Press EXE when you have finished selecting your option.





On FINE TUNING indicator
This indicator shows the operable fine-tuning range and stops at the optimal point of reception. When the VCR's tuner is receiving an optimal broadcast signal, the indicator stops at the centre position or one space right or left of the centre position. However, even when a broadcast is received in an optimal condition, the indicator may not be at the position described.

Allocating the Channels Directly

Enter the desired programme numbers using the programme position number buttons. To enter one's digits, press the desired number. To enter two digits numbers, press the -/- - (10's digit) button, then press the ten's digit number and the one's digit number.

Disabling Unwanted Channels

If you want to let only desired programme positions appear when you select the programme position for normal recording, quick timer recording or timer-activated recording, you can do this by following the procedure below.

1 Press MENU, move the cursor (▶) down to "TUNER PRESET" and press EXE.

2 Press PROG +/– on the flap of the remote control or PROGRAM +/– on the inside surface of the upper drop-down panel of the VCR until the programme position you want to disable appears in the PROG field of the TUNER PRESET menu.
You can also use the jog dial to select the programme position.
To use this, press PROG function button to light the indicator beside the button.

3 Press programme position number button 0 twice or keep pressing the left and right cursor keys until "0" is displayed in the CHANNEL SET field.

4 Repeat steps 2 and 3 to disable other programme positions.

5 Press EXE.

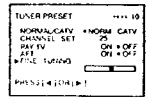
If You Can't Get a Clearer Picture –Fine -Tuning

Normally, the Auto Fine Tuning (AFT) setting on the TUNER PRESET menu is set to ON, and the AFT function fine-tunes the picture. If the picture of a programme is not acceptable, fine-tune it manually.

1 Select the programme position in which the picture is distorted using PROG +/– on the flap of the remote control or PROGRAM +/– on the inside surface of the upper drop-down panel of the VCR.
You can also select the programme position by pressing the PROG function button on the remote control to light the indicator beside the button and turn the jog dial clockwise or counterclockwise.

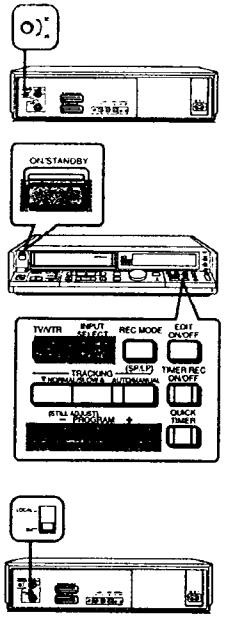
2 Press MENU, move the the cursor (▶) down to "TUNER PRESET" and press EXE.

3 Press ▲ or ▼ of the cursor keys to move the cursor (▶) down to FINE TUNING.
The FINE TUNING indicator is displayed in the TUNER PRESET menu.



4 Press ▲ or ▼ of the cursor keys to get a clearer picture.
The AFT function switches off automatically.

5 If you can't get a better picture, press ▲ to move the cursor (▶) up to "AFT," select "ON" and press EXE.
The TV screen returns to the original screen.



If You Have Failed in Tuning the VCR to Your TV

1 Find a UHF channel between 30 and 39 where there is no picture and you can hear a steady rustling sound or no sound at all.

2 Press INPUT SELECT several times until "LINE L2" appears in the VCR display panel.

3 Press TV/VTR several times until "VTR" appears in the VCR display panel.

4 With the supplied plastic adjuster, turn the RF CHANNEL screw (at the rear of the VCR) to a channel where your TV clearly displays a blue screen with the tape counter.

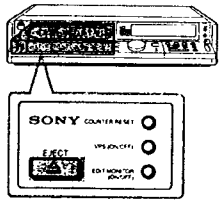
5 Press INPUT SELECT several times until "TUNER" appears in the VCR display panel.

6 Press PROGRAM +/– to see if the TV screen changes to a different channel.

If the TV Signal is too Strong

You can strengthen or attenuate the reception signals using the LOCAL /DX switch at the rear of the VCR.
Normally set this switch to the DX position. If the reception signals are very strong, set it to the LOCAL position.

Playback



This section shows you how to play back a video cassette.

Inserting a Video Cassette

1 Open the upper-drop down panel.

2 Insert a video cassette.

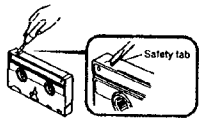
3 Gently press the centre of the front side of a cassette with the arrow indication facing upwards until the mechanism draws it into the compartment.
When the cassette has been loaded, the cassette indicator lights in the VCR display panel and the VCR turns on automatically.
If you insert a cassette with its safety tab removed, playback starts automatically.

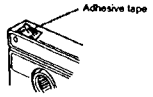
Ejecting the Cassette

Press ≜ EJECT on the VCR.

You can eject the cassette even if the power is off.
When you press ≜ EJECT, the power is turned on. After ejecting the cassette, the power automatically shuts off.

Note
You cannot eject a cassette during recording or recording pause mode.

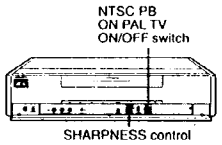




Protecting your cassette against accidental erasure

The cassette is provided with a safety tab to protect against accidentally erasing a previous recording. Break off the safety tab with a screw driver or a similar tool as shown on the illustration at left . If the safety tab is removed, the VCR ejects the cassette when you try to record on the cassette.

To record on a cassette with the safety tab broken off, simply cover the tab hole with adhesive tape.



Playing Back a Cassette

The VCR automatically detects the tape speed (SP or LP) with which a cassette was recorded. If you insert a cassette with its safety tab removed, playback starts automatically.

1 Insert a cassette.
The VCR turns on automatically.

2 Press TV/VTR several times to light up the VTR indication in the display window of the VCR.

3 Turn on the TV.
If you have made only an aerial connection, turn to the programme position you set the VCR to in "**Step 3** Tuning the VCR to your TV" on page 7.

4 Set the NTSC PB ON PAL TV ON/OFF switch to "ON" if you play back an NTSC-recorded tape.

5 Press ► PLAY.
When the tape reaches the end, it automatically rewinds.

To stop playback
Press ■ STOP.

To stop play back for a moment
Press II PAUSE.
Press II PAUSE again or press ► PLAY to resume playback.

To advance the tape rapidly
Press ■ STOP, then ►► FF.

To rewind the tape.
Press ■ STOP, then ◄◄ REW.

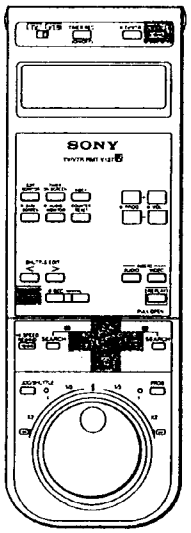
To rewind the tape at a higher speed
Press ◄◄◄ HI-SPEED REWIND.

To start playback automatically after rewinding a cassette (AUTO PLAY)
This feature works only from the VCR.
Press ► PLAY while holding ◄◄.
The "►" indication flashes while the tape is being rewound.

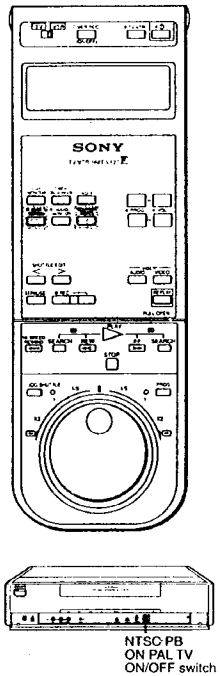
To view the picture during fast forward mode or rewind mode
Keep pressing ►► during fast forward, and keep pressing ◄◄ during rewind.
Release the button to return to fast forward or rewind.

To turn the VCR on or off
Press ON/STANDBY on the VCR or I on the remote control.

Adjusting the sharpness of the picture
Turn the SHARPNESS control inside the lower down-panel of the VCR.
Turn to SHARP to get a sharper picture, and to SOFT to get a softer picture.



Never unplug the power cord while the tape is in motion
This may cause the tape to be jammed in the VCR. When you need to unplug the mains lead, be sure to remove the cassette or turn off the power of the VCR.



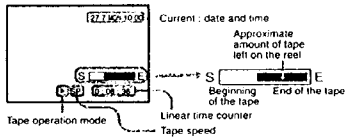
When the data screen does not appear on the TV screen
Check to see that the LINE OUT jacks are connected to the line input jacks of the TV. If this is the case, the data screen doesn't appear.

Notes on counter reading
- The counter does not work on the portions on which no recording has been made.
- After a cassette is ejected, the counter reading is retained. When a cassette is inserted in the VCR, the counter reading automatically returns to "0H00M00S."

Using the Data Screen

The data screen may appear on your TV screen when you first turn on the VCR. If the data screen does not appear, press DATA SCREEN on the remote control. The data screen does not appear when the NTSC PB ON PAL TV switch is set to ON.

The Data Screen with Tape Counter Display



To turn off the data screen
Press DATA SCREEN.

Indexing Tape Contents

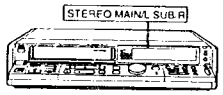
You can use the tape counter as a reference to locate a desired scene by rewinding the tape.
Press COUNTER RESET on the remote control or on the VCR to set the counter to "0H00M00S" (counter zero position) before you play back or record.
To view a desired scene after playback or recording, rewind the tape to the counter zero position.

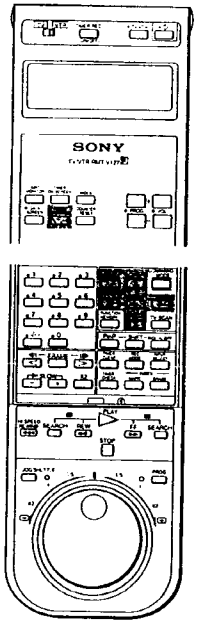
NTSC-recorded Tapes

You can play back a cassette recorded in NTSC video system using the SP mode (NTSC-recorded tape) on a PAL system television set. If the tape is recorded in the Hi-Fi system, the Hi-Fi sound can be reproduced.

Slide the NTSC PB ON PAL TV ON/OFF switch to "ON" every time you watch an NTSC recorded tape.
When you watch a PAL recorded tape, return the NTSC PB ON PAL TV switch to OFF. And if you are using a TV equipped with the COLOUR SYSTEM selector switch, set the COLOUR SYSTEM selector switch to "PAL."

The following will occur during playback of an NTSC-recorded tape
- The time/tape-counter display will not appear even if you press DATA SCREEN.
- Depending on the TV you are using, the following phenomena may occur separately or in combination:
  -the picture becomes black and white
  -the picture shakes
  -no picture appears on the screen
  -black streaks appear horizontally on the screen
  -the colour density increases or decreases
  -the audio becomes normal audio and noise appears in LP and EP mode
- If a tape has portions recorded in PAL and NTSC video systems, the tape counter reading is not correct. This discrepancy is due to the difference between the counting cycles of the two video systems.
- You may not use the digital functions for an NTSC-recorded tape. For details see page 34.
- You canndt edit the NTSC-recorded tape onto another VCR.





You cannot select the monitor sound in the following cases

- When a monaural tape (a tape which has no recording on its Hi-Fi track) is played back.
- When AUDIO MIX ON is selected in the MODE SET menu.

Selecting the Monitor Sound

You can select the sound you want to hear when you play back a stereo or bilingual tape, or when you want to play back a tape on which sounds were mixedly recorded on the Hi-Fi audio track and the normal audio track.

Listening to a Stereo or Bilingual Tape

Press AUDIO MONITOR to select the sound to hear.
With each press, you change from stereo (left and right channel sounds), to left-channel sound, to right-channel sound or to the sound on the normal audio track. The selected sound type appears in the display window of the VCR.

Display	Sound heard	
	Stereo tape	Bilingual tape
STEREO	Stereo	Left and right channels
MAIN/L	Left channel	Left channel
SUB/R	Right channel	Right channel
No indication	Monaural (on normal audio track)	Sound on normal audio track

Listening to Mixed Sounds

You can hear the sounds recorded on the Hi-Fi audio track and the normal audio track at the same time. This function is useful when you listen to an audio-inserted tape. (For details on the audio insert function, see page 61.)

1 Press MENU.
The main MENU appears.

2 Press ▲ or ▼ of the cursor keys to move the cursor (▶) to "MODE SET."

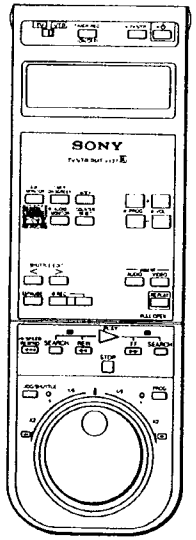
3 Press EXE.
The MODE SET menu appears.
If the MODE SET [PAGE 1] menu is displayed on your TV screen, press ▲ or ▼ of the cursor keys to move the cursor (▶) to "NEXT PAGE," then press EXE.
The MODE SET [PAGE 2] menu appears.

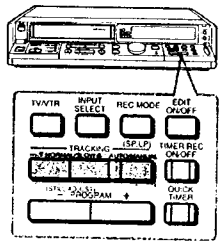
4 Press ▲ or ▼ of the cursor keys to move the cursor (▶) to "AUDIO MIX."

5 Select ON or OFF using ◀ or ▶ of the cursor keys.
ON: to make the AUDIO MONITOR button inoperative so that the sounds of the Hi-Fi video and normal audio tracks are always output.
OFF: to make the AUDIO MONITOR button operative so that you can select the sound to hear.

6 Press EXE to store the setting.
The TV screen returns to the original screen.

When you have finished the playback of a particular tape such as an audio inserted tape, reset the AUDIO MIX setting to OFF.





When the sound on the Hi-Fi audio track is not clear, adjust it with TRACKING NORMAL/SLOW (STILL ADJUST) ▼/▲. When the recording condition is poor, you can't adjust.

Removing Picture Distortion

Usually, the tracking control function removes picture distortion automatically. However, occasionally, streaks or "snow" may appear on the screen when you play a video tape. When this happens, you can adjust the tracking manually.

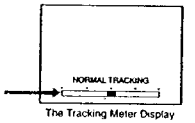
Automatic Tracking Adjustment

"AUTO TRACKING" flashes while the VCR is searching for the best tracking condition and lights steadily when it finds the best possible tracking. If the VCR cannot find the best tracking condition, adjust the tracking manually.

Manual Tracking Adjustment

1 Press DATA SCREEN to display the tape counter on screen.

2 Press ▼/▲ on the TRACKING NORMAL/SLOW (STILL/ADJUST) buttons to get the best picture.
The tracking meter appears on the screen.
The distortion should disappear as you press one of the two buttons.
The tracking meter does not appear when the NTSC ON PAL TV switch is set to ON.

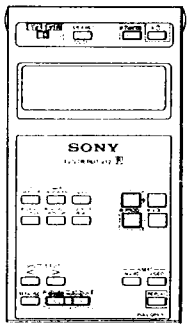


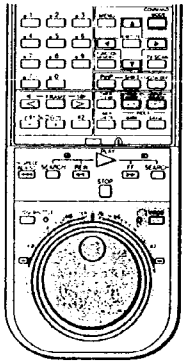
The Tracking Meter Display

When you cannot get a better picture even if you have made manual tracking, press AUTO/MANUAL to return automatic tracking adjustment mode.

To return to the tracking meter to its normal position
Simultaneously press ▼/▲ on the TRACKING NORMAL/SLOW (STILL/ADJUST) buttons.

Recording TV Programmes





If the tape is ejected when the REC buttons are pressed
The tab on the cassette is out. Use another cassette with its safety tab intact.

If you are using a Sony TV
You can use the remote control of this VCR to operate the TV. When doing this, slide the [TV]/[VTR] remote control selector at the top of the remote control to "TV". To operate the VCR, return the [TV]/[VTR] remote control selector to "VTR."

You can record TV programmes in one of three ways:
-While you are watching the programme (this page)
-While you are watching another programme (See page 21.)
-While you are not watching the TV at all (See page 21.)

Before you begin

- Make sure that the connections have been made correctly (see "**Step 2** Connecting the VCR" on page 6.)
- Check that "TUNER" lights up in the VCR display panel.

Recording While Watching the TV Programme

1 Insert a cassette. (Its safety tab must be in place.)
The VCR turns on automatically (Auto power on).

2 Turn on the TV.

3 Press TV/VTR on the remote control several times until "VTR" appears in the VCR display panel. (If you have made only an aerial connection, turn to the video channel you set the VCR to in "**Step 3** Tuning the VCR to Your TV" on page 7.)

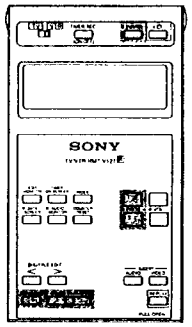
4 Select SP or LP with REC MODE (SP/LP).
In the LP mode, you can record twice as long as in the SP mode.

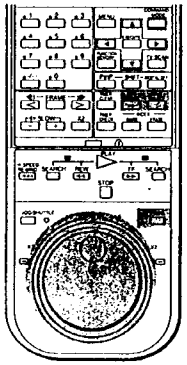
5 Press PROG+/– on the flap of the remote control or PROGRAM +/– on the inside surface of the upper drop-down panel of the VCR to select the programme position.
You can also use the jog dial to select the programme position. To use this, press the PROG function button to light indicator beside the button. Turn the jog dial clockwise for higher numbered programme positions or counterclockwise for lower numbered programme positions.
The programme number will change in the VCR display panel and on the TV screen.

6 Press the two ●REC buttons on the remote control at the same time, or the REC button on the VCR.
The REC (recording) indication lights up in the VCR display panel.

To stop recording
Press ■STOP.

When the cassette reaches the end
The cassette rewinds to the beginning automatically and the power remains on.





Pausing
You can stop recording an unwanted scene and resume recording smoothly.

1 Press ❚❚ PAUSE when an unwanted scene appears.
Recording will stop and the VCR enters recording pause mode.

2 Press ❚❚ PAUSE again at the desired point to release pause mode.
Recording resumes from the point set in step 1.

When the recording pause mode lasts for approximately 5 minutes, the VCR enters stop mode.

Recording with the TV Off

Turn off the power of the TV or monitor.
There will be no interference with the recording.

Recording While Watching Another Programme

The recording procedure differs depending on the type of TV-VCR connection you have made.

1 Record the programme following the steps 1 to 6 on page 20.

2 Do one of the following depending on the type of connection your VCR has:

If you have made a EURO-AV connection:

1 Press TV/VTR until "VTR" disappears from the VCR display panel.

2 Select the programme you want to watch on the TV.

If you have made an aerial connection only:

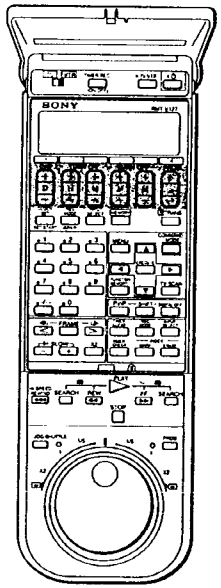
Select the programme you want to watch on the TV.

If you have made a LINE OUT VIDEO/AUDIO connection:

1 Select the tuner input on the TV.

2 Select the programme you want to watch on the TV.

Timer-Activated Recording



The timer recording function lets you preset your VCR to record up to eight programmes within a one-month period. Perform this procedure on the remote control and transmit the preset data to the VCR.

Before you begin

- Make sure that the time and date clock is set correctly (see **"Step 6** Setting the Clock" on page 11.)
- Check to see that the cassette is long enough to record all the programmes.
- Make sure that the safety tab of the cassette has not been removed. If you insert a cassette without a safety tab and try to set the timer, a short beep sound will be heard repeatedly and the cassette automatically ejects from the VCR.

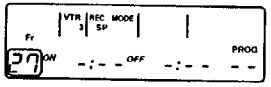
Setting the Timer

Example
Here is how to record a broadcast on programme position 8 from 20:00 to 20:50 on Friday, 27th November 1992, in SP mode.

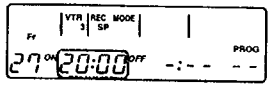
1 Open the flap of the remote control.
The remote control enters timer preset mode.

Note:
Never close the flap until you finish transmitting the programme data to the VCR.

2 Press D (DAY) until 27 appears.
The day of the week (Friday) is automatically set.

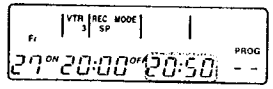


3 Press H under the TURN ON section until 20 appears.

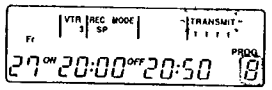


4 Press M under the TURN ON section until 00 appears.

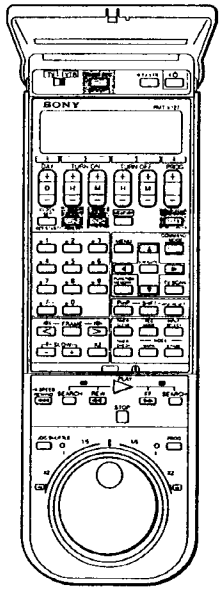
5 Press H and M under the TURN OFF section until 20:50 appears.



6 Press PROG+/– until 8 appears.



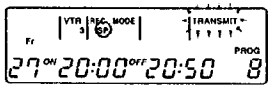
You can use the following buttons during timer-recording
- TIMER REC (ON/OFF) to stop recording
- COUNTER RESET (See page 17)
- TV/VTR (See page 21)
- TIMER CHECK (See page 26)
- DATA SCREEN (See page 17)
- TIMER ON SCREEN (See page 25)



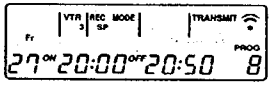
If power interruption occurs during timer recording
Recording will stop and your VCR will turn off. If power is restored within one hour, and it's before the recording end time, recording will start again from that point. If the interruption lasts for more than one hour, any presettings will be erased and you'll need to reset the time and date for your programmes. Note that the tape counter will return to "0H00M00S."

To record a satellite programme from a satellite tuner connected to EURO-AV (LINE 3) connector
Press INPUT SELECT to display "LINE L3" in the remote display. You need a commercially available timer to turn on/off the satellite tuner at the preset time. The programme position to be recorded must be preset on the satellite tuner.

7 Set the recording speed, SP or LP, with REC MODE (SP/LP).
The TRANSMIT indicator flashes to tell you that all of the items have been entered.



8 Point the remote control to the VCR and press TRANS. Press TRANS within five minutes after you have entered all the items.
A beep sound will tell you that the preset data have been transmitted to the VCR, and the VCR enters recording standby mode.
The TIMER REC indicator lights up in the VCR display panel and the contents of the timer setting you've just transmitted to the VCR also appears in the VCR display panel.
The PROGRAM LIST appears on the TV screen for a few seconds if the VCR is turned on.



To set another programme, repeat steps 2 to 8.

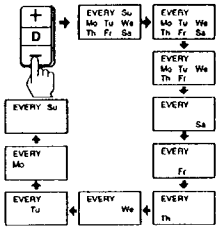
9 Close the flap of the remote control so that the present time appears on the remote display.
The VCR turns on automatically and starts recording at the preset time, then turns off after recording ends.

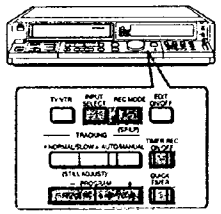
To stop timer-recording
To stop timer-recording while a programme is being recorded, press TIMER REC (ON/OFF).

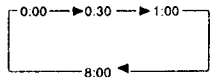
To rewind the tape after timer recording is over
Use the TIMER REC-REW function (for details, see page 41).

To record video source from the EURO-AV (LINE1) connector, EURO-AV (LINE3) connector or LINE IN 2 AUDIO/VIDEO jacks
Press INPUT SELECT any time in steps 1 to 6 to change the indication from PROG-- to LINE L1 (for the EURO-AV (LINE 1) connector), LINE L2 (for the LINE IN 2 AUDIO/VIDEO jacks), or LINE L3 (for the EURO-AV (LINE3) connector).

To record a TV programme and audio signals from equipment connected to the EURO-AV (LINE 1) connector or LINE IN 2 AUDIO simultaneously.
For selecting the audio input terminal, see item "SIMUL AUDIO IN" on page 40.
Set the desired programme position and press INPUT SELECT to indicate SIMUL in step 6.







If your cassette ends during quick-timer recording
Recording stops and the VCR turns off. The cassette will not rewind automatically.

If a power interruption occurs during quick-timer recording
Recording will stop and the VCR will turn off. If the interruption lasts less than one hour and the power is restored before the recording end time, recording will start again from the time the power is restored.

For the buttons you can use during quick-timer recording
See page 22.

Daily/Weekly Recording

You can preset your VCR for daily or weekly recording.

Daily recording records the same programme every day of the week, while weekly recording records the same programme on the same day, every week.

In step 2 of the "Setting the Timer" section (page 22), press the –(minus)-side of the D button to change the indication in the remote display to one of the choices. (See the diagram at left.) When you set and transmit your preset data to the VCR, the corresponding indicator lights up in the VCR display panel.

Quick-Timer Recording

This function is convenient for recording programmes without going through the entire timer setting procedure. Note, however, that it provides only an approximate setting for the programme you wish to record.
If you're currently recording, skip to step 7.

1 Insert a cassette into your VCR.

2 Press INPUT SELECT to select TUNER.

3 Select the desired recording speed (SP or LP) by pressing REC MODE on the inside surface of the upper drop-down panel.

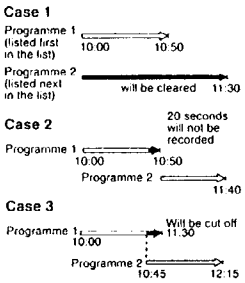
4 Press QUICK TIMER on the VCR.
If you insert a cassette with the safety tab removed, your VCR will eject the cassette.

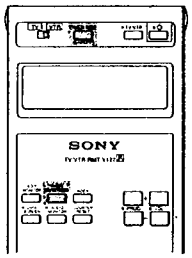
5 Select the programme position you wish to record using PROGRAM +/– on the inside surface of the upper drop-down panel of the VCR. The programme position can be changed while the programme position indicator is flashing (for about 30 seconds).

6 Press QUICK TIMER again to start recording.
Unless you press QUICK TIMER within 30 seconds, the power will be turned off.

7 Select the recording duration by pressing QUICK TIMER to change the duration indicator in the display window.
Each time you press QUICK TIMER, the recording duration increases by 30 minutes (up to 8 hours).
Once recording has finished, your VCR will turn off automatically.
During quick-timer recording, the recording time can be changed by pressing the QUICK TIMER button. During recording, the time displayed will count down in units of one minute.

To stop quick-timer recording
To stop quick-timer recording while a programme is being recorded, press TIMER REC (ON/OFF).





Notes
- If you set a programme to record only one time, that setting is erased from the PROGRAM LIST display when the recording has finished.
- To check the timer settings during timer recording, press TIMER ON SCREEN.

Overlapping Timer Recordings

If you have made a "mistake" when presetting multiple programmes, the VCR will interpret your settings as described in the following cases.

Case 1: If you preset two programmes to record at the same time...

The programme listed first on the PROGRAM LIST display has priority over the other programmes. The timer settings for lower priority programmes will be deleted from the PROGRAM LIST display when recording begins for the first programme.

Case 2: If you set programme 2 to record at the same time you set programme 1 to finish recording...

The last 20 seconds of programme 1 will not be recorded.

Case 3: If you set programme 2 to record before programme 1has finished recording...

Programme 2 will begin recording before programme 1 has finished.

Checking the Timer Settings

Here's how to display your timer settings to confirm the programmes you wish to record.

1 Press TIMER REC (ON/OFF) to release timer recording standby mode.
The TIMER REC (recording) indicator turns off in the VCR display panel.

2 Press ⏻ to turn on the VCR.

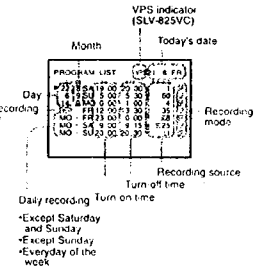
3 Press TV/VTR so that the VTR indicator lights up in the VCR display panel.

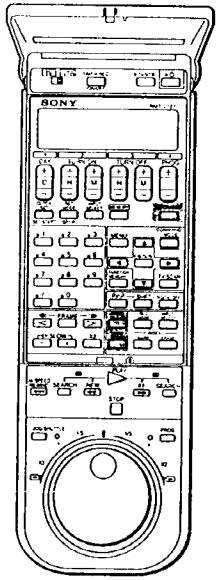
4 Turn on the TV.
If you have made only an aerial connection, turn to the video channel you set the VCR to in "Step 3 Tuning the VCR to Your TV" on page 7.

5 Press TIMER ON SCREEN.
The PROGRAM LIST appears on the TV screen for you to check.

6 After you have checked the settings, press TIMER ON SCREEN again.
The original TV screen appears.

7 Press TIMER REC (ON/OFF) to return to timer recording standby mode.
The TIMER REC (recording) indicator turns on in the VCR display panel.





Changing or Cancelling the Timer Settings

Here's how to change or cancel any timer settings on the PROGRAM LIST display.

1 Display the PROGRAM LIST display on the TV screen.
Follow steps 1 through 5 of the "Checking the Timer Settings" (page 25) section.

2 Press TIMER CHECK to display the cursor (▶).

3 Press TIMER CHECK to move the cursor (▶) to the setting you want to change or cancel.

4 **To change the setting**
Re-enter all the items and transmit it to the VCR. (See "Setting the Timer" on page 22.)
The VCR returns to timer recording standby.

To cancel the setting
Press TIMER CLEAR.

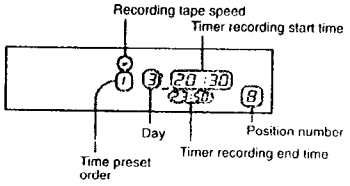
To change or cancel timer settings without using the PROGRAM LIST display

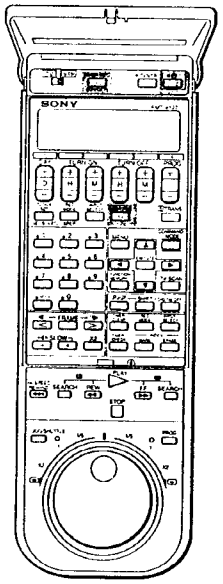
Using this method, you can change or cancel the timer settings without releasing the timer recording standby mode.

1 Press TIMER CHECK repeatedly until the programme you want to change or cancel appears in the VCR display panel.

2 **To change the timer setting,** change the settings and press TRANS to transmit it to the VCR.

To cancel the setting, press TIMER CLEAR.
The timer setting of the selected programme is cancelled.





Using the VCR Before Timer Recording Starts

1 Press TIMER REC (ON/OFF).
The TIMER REC (recording) indicator in the VCR display panel turns off and the VCR leaves the timer recording standby mode.

2 Press ⏻.
The VCR is ready to use.
A short beep sound will be heard and the message will appear on the TV screen five minutes prior to a preset timer start time.

3 After using the VCR, press TIMER REC (ON/OFF).
The VCR returns to the timer recording standby mode.

Storing the Timer Settings

Once a one-time programme has been recorded, the setting is cancelled, and if you wish to record at that time again, you need to reenter the settings. Daily /Weekly recordings are of course kept in memory and repeated until you change them. However, if you store the timer settings into the remote control's memory, you can recall the timer settings whenever you want. You can store up to four settings into the remote control's memory. Each setting is stored into one of four positions (A, B,C and D). Moreover, the recording date shifts automatically to the next week after the recording is completed. Thus, you can have easy access to the most frequently used settings, especially your favourite weekly programme.

1 Press MEMORY so that MEMORY A appears in the remote display.

2 Set all items for timer-activated recording.
(See "Setting the Timer" on pages 22 and 23.)
The setting is stored in MEMORY A.

3 If you want to store other settings, press MEMORY several times until the positions you want to store settings (B, C, or D) appears, then repeat step 2.

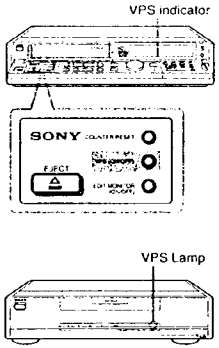
The settings are kept in memory even if you close the flap of the remote control.

Recalling and re-entering the settings

1 Press MEMORY several times until the indication (A, B, C or D) you want to recall/change appears.

2 Make whatever changes you want.

3 Press TRANS.
The VCR enters timer-activated recording standby mode.



Notes on VPS Recording

- If recording times overlap due to a VPS time shift, the programme that was broadcast first has priority. The second programme will begin to record only when the first programme has finished.
- The VPS button is effective only when TIMER REC does not light up in the VCR display panel.
- If the VPS cannot receive a VPS signal because the signal is too weak or because the station failed to transmit VPS signals, the VCR will record the programme without the VPS function regardless of the VPS indication in the VCR display panel.

VPS Recording (SLV-825VC models only)

The German broadcasting system transmits VPS (Video Programme System) signals with its TV programmes. These signals assure you that your timer recordings are made regardless of broadcast delays, early starts, or broadcast interruptions. For example, if an urgent news bulletin interrupts a regular programme, recording will stop. As soon as the interrupted programme resumes, recording starts again.

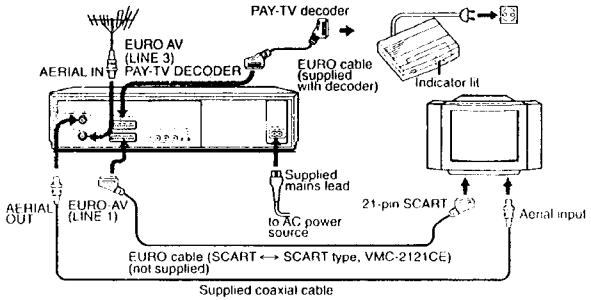
1 Make sure the "TIMER REC " indicator is not lit in the VCR display panel.

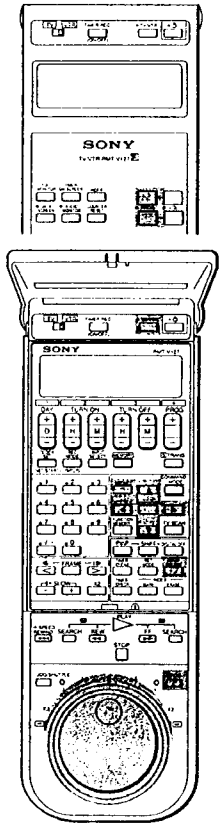
2 Before setting the timer to record, press VPS (ON/OFF) on the inside surface of the upper drop-down panel so that the "VPS" indicator lights in the VCR display panel.

3 Set the timer following the steps of "Timer-Activated Recording" (page 22). The VCR will enter standby mode for VPS recording well before the turn-on time so as to be ready if there is a change in the start time.
The VPS lamp on the front panel lights up when the signal with VPS label is received by the VCR. The VPS indicator in the VCR display panel lights up when you press the VPS (ON/OFF) button on the inside surface of the upper drop-down panel.

PAY-TV Programme Recording (SLV-825VC models only)

You can watch or record a PAY-TV programme if you connect the decoder (not supplied) to the VCR. (See the connection below.)





Notes

- So long as the decoder is connected to the VCR, make sure to keep the mains lead of the decoder connected to an AC outlet.
- If you want to store normal television programmes, make sure that the PAY TV in the TUNER PRESET menu is set to "OFF."

Presetting PAY-TV programme Broadcasts

Before watching or recording a PAY-TV programme, you should preset PAY-TV programme broadcasts to store them into the VCR.

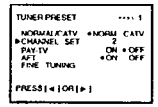
1 Turn on the VCR and TV.

2 Press INPUT SELECT so that "TUNER" appears in the front panel display.

3 Turn on the TV.

4 Press TV/VTR on the remote control several times until "VTR" appears in the VCR display panel.

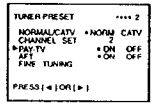
5 Call up the TUNER PRESET menu. (See "**Step 5** Tuning the VCR to the Required Stations" on page 9.)



6 Press PROG +/– on the flap of the remote control or PROGRAM +/– on the inside surface of the upper drop-down panel of the VCR to select the programme position.
You can also use the jog dial to select the programme position. To use this, press the PROG function button to light the indicator beside the button. Turn the jog dial clockwise for higher numbered programme positions or counterclockwise for lower numbered programme positions.
The programme number will change in the VCR display panel and on the TV screen.

7 Press ▲ or ▼ of the cursor keys to move the cursor (►) to "CHANNEL SET" and tune in PAY-TV channels.

8 Press ▲ or ▼ of the cursor keys to move the cursor (►) to "PAY-TV" and select "ON." Then press EXE.

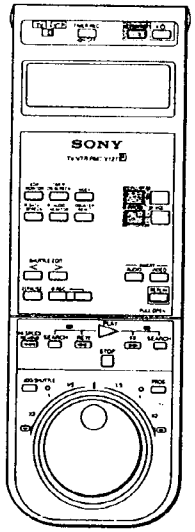


Important

Once you have preset a single TV programme with the PAY-TV setting ON, the upper EURO-AV connector on the rear of the VCR can't be used as an external connector (LINE 3), but can only be used as the connector which is connected with the PAY-TV decoder. Because of this, "LINE 3" will not appear even if you press the INPUT SELECT button. The input mode indication will then change as:

TUNER → SIMUL → LINE 1 → LINE 2 → TUNER

If all the TV programmes are preset again with the PAY-TV setting OFF, the upper EURO-AV connector can be used as a LINE 3 input terminal and LINE 3 becomes effective when you connect any other equipment except the PAY-TV decoder to this connector.



Recording a PAY-TV programme

Turn on the power of the decoder first.
For the steps other than described below, refer to "Recording TV Programmes" on page 20.

To record a PAY-TV programme while watching it
Select a PAY-TV programme using PROG +/– on the flap of the remote control.

To watch a normal TV programme while recording a PAY-TV programme
Press TV/VTR so that "VTR" goes off, then select a normal television programme you want to watch on the TV.

To watch a PAY-TV programme while recording a normal television programme
Press TV/VTR to turn off "VTR", then select a PAY-TV programme you want to watch on the TV.

The following table will show you which indicators are lit during the watching and recording of a PAY-TV programme.

VTR indicator	To watch	To record
Lit	PAY-TV programme	PAY-TV programme
Unlit	Normal television	PAY-TV programme
Unlit	PAY-TV programme	Normal television

Recording a PAY-TV programme using the timer-activated recording function

Select a PAY-TV programme in step 6 of "Setting the Timer " on page 22. The other steps are the same as the normal timer-activated recording. The PAY-TV decoder must be kept turned on.

Watching a PAY-TV programme with the VCR turned off

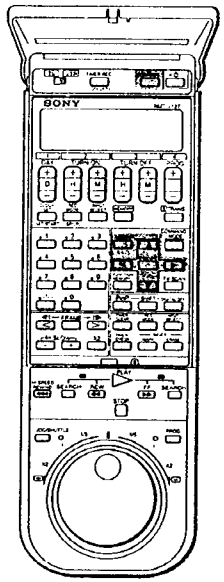
Select a PAY-TV programme you want to watch on the TV.

Subtitle superimposing

Put the subtitle ON/OFF switch of the decoder to ON. Note that you cannot record the subtitle on the VCR.

Notes

- If the VCR records a PAY-TV programme which has been preset in the VCR's memory, this PAY-TV programme is not decoded on your TV even if you tune in this programme on your TV.
- You cannot use the subtitle superimposing function unless the 21-pin EURO-AV cables which are compatible with the RGB signals, are used for both the decoder-VCR and VCR-TV connections.



Temporarily using the EURO-AV (LINE 3) PAY-TV DECODER Connector as LINE 3 Input Terminal

Once you have done PAY-TV presetting, the upper EURO-AV connector on the rear of the VCR becomes the connector exclusively for a PAY-TV decoder. If you want to temporarily use this connector as a LINE 3 input connector for dubbing the tape, do the following.

1 Turn on the VCR and TV.

2 Press TV/VTR on the remote control several times until "VTR" appears in the VCR display panel.

3 Press MENU.
The main MENU appears.

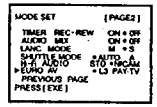
4 Press ▲ or ▼ of the cursor keys to move the cursor (►) to "MODE SET."

5 Press EXE.
The MODE SET menu appears.
If the MODE SET [PAGE 1] menu is displayed on your TV screen, press ▲ or ▼ of the cursor keys to move the cursor (►) to "NEXT PAGE", then press EXE.
The MODE SET [PAGE 2] menu appears.

6 Press ▲ or ▼ of the cursor keys to move the cursor (►) to "EURO AV."

7 Select "L3" using ◄ or ► of the cursor keys.

8 Press EXE.



Now you can use the upper EURO-AV connector as LINE 3 input terminal (if you connect a PAY-TV decoder to this connector, a PAY-TV programme is not decoded.)

To use the upper EURO-AV connector exclusively for the PAY-TV decoder again, perform steps 1 to 6, select "PAY-TV," then press EXE.
You don't need to preset PAY-TV programmes again to watch and record. The programmes you have preset in the VCR's memory as PAY-TV programmes will still be effective.

Notes

- Depending on the equipment you connect to the EURO-AV (LINE 3) connector, the selector equivalent to the TV/VTR switching selector is not always set to the "TV" position. In this case you always have the output of this equipment on the TV. When you don't need to watch, turn off the power of this equipment.
- The line-through function does not support the RGB signals. Accordingly, if the connected equipment outputs superimpose signals, you can't watch them.

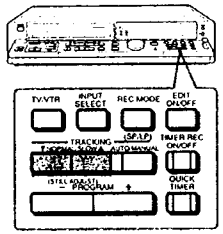
Line-through

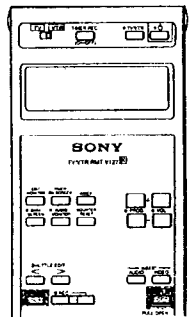
With the line-through function, you can watch a picture coming from a source connected to your VCR through the EURO-AV (LINE 3) connector even though your VCR is turned off.
For this function to work, you need the following conditions:

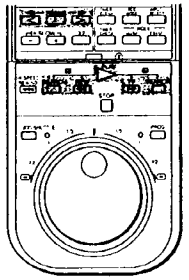
- The source equipment should be connected to the VCR's upper 21-pin EURO-AV (LINE 3) connector with a 21-pin EURO-AV cable.
- The source equipment needs to have a TV/VTR, TV/DISC, TV/SAT or equivalent selector switch, which you set to the non-TV position. (The VTR indicator should not be lit in the VCR display panel.)
- The VCR's lower EURO-AV (LINE 1) connector and your TV are connected with a 21-pin EURO-AV cable.

To watch a TV programme rather than the picture from the source connected to the VCR, simply set the TV/VTR switch of the connected equipment (which may be called TV/DISC, TV/SAT, or an equivalent) to the "TV" position.

Variable Speed Playback







Note
During variable speed playback, "streaks" or "snow" may appear on the picture, the picture may flicker and the colour may not be reproduced properly depending on the speed or the direction.

The following section explains the advanced playback functions available on your VCR. No sound is heard during these operations.

Replay

During playback and playback pause, press REPLAY.
The VCR replays in slow-motion the last two seconds of the scene just played back. After replay is over, the VCR resumes normal playback (or playback pause).
If you continue to press REPLAY, the tape will rewind as long as the button is held down. However, slow playback continues for about more than one minute, the VCR resumes normal playback automatically.

Still Picture

During playback, press II PAUSE to hold the picture in one place.

To resume normal playback, press either ▶ PLAY or II PAUSE.

If you leave your VCR in pause mode, normal playback resumes after approximately 5 minutes.

To reduce the bands on the top or bottom of the screen in still mode
Change to the slow motion play mode and adjust the picture with TRACKING NORMAL/SLOW (STILL ADJUST) ▼/▲.
To reduce the picture shaking during still mode
Adjust the picture with TRACKING NORMAL/SLOW (STILL ADJUST) ▼/▲.

Picture Search (During Playback)

Press ▶▶ FF or ◀◀ REW during playback.

When you release the button, normal playback will resume.

Locked Picture Search

This feature works only from the remote control.

Press ⇔ or ⇔ SEARCH on the remote control in the playback mode.
For the reverse direction, press the left ⇔ SEARCH button. For the forward direction, press the right ⇔ SEARCH button.

To resume normal playback, press ▶ PLAY.

Frame-by-Frame Picture

This feature works only from the remote control.

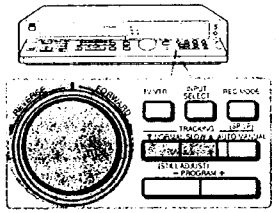
During playback pause, press II▶ on the remote control to advance the picture one frame or ◀II to go back one frame.

To resume normal playback, press ▶ PLAY.

Reversing the Normal Playback

This feature works only from the remote control.

Press ◀II (<) during normal playback.



Slow Motion Playback

This feature works only from the remote control.

Press II▶ SLOW +/– to start slow motion playback during playback.

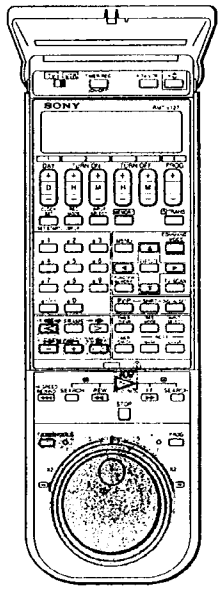
You can change the playback speed of slow motion playback from 1/5 to 1/30 times the normal speed.
Press II▶ SLOW + to increase the playback speed.
Press II▶ SLOW – to decrease the playback speed.

To resume normal playback, press ▶ PLAY.

To play back in the reverse direction
Press ◀II (<).

To resume normal playback, press ▶ PLAY.

To reduce streaks or "snow" during slow motion playback
Adjust the picture with TRACKING NORMAL/SLOW (STILL ADJUST) ▼/▲ on the inside surface of the upper drop-down panel of the VCR.



X2 Double Speed Playback

This feature works only from the remote control.

Press X2 on the remote control.

To playback in the reverse direction
Press ◀II (<).

To resume normal playback, press ▶ PLAY.

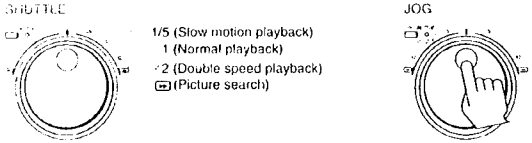
JOG/SHUTTLE Operation

Using the JOG dial and SHUTTLE ring on the VCR or the remote control during playback or playback pause, you can play back cassettes at a variety of speeds, in either forward or reverse direction.

Using the SHUTTLE ring
1* Press the JOG/SHUTTLE function button.
The indicator beside the button lights up.
2 Turn the ring and hold it.
Playback speed is selected according to the turning angle as illustrated. The same speeds are available in the reverse direction.

Using the JOG dial
1* Press JOG/SHUTTLE function button.
The indicator beside the button lights up.
2 Turn the dial.
Playback speed varies according to the speed at which you turn the dial (frame-by-frame, slow, x1). The same speeds are available in the reverse direction.

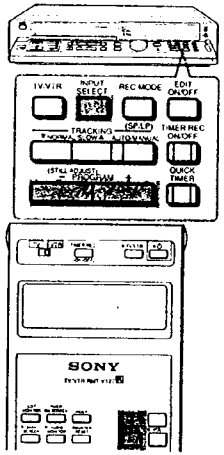
Note
It takes about two or three seconds to reverse the direction in slow motion playback or frame-by-frame picture.

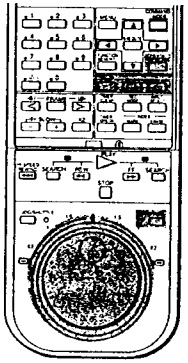


remote control only

Releasing JOG/SHUTTLE produces a still picture.
To resume normal playback, press ▶ PLAY.

Watching Multiple Picture





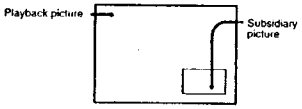
Notes

- When you use P in P during the playback of an NTSC-recorded tape, the lower part of a subsidiary picture may not appear and/or noise will appear in the lower part of a subsidiary picture. The lack of the picture and noise are due to the difference of the video systems.
- If all preset programmes are scanned during TV SCAN operation, TV SCAN stops scanning the preset programmes.

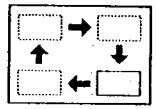
Using the digital memory built in this VCR, you can enjoy a couple of digital operations.

Using P in P (Picture in Picture)

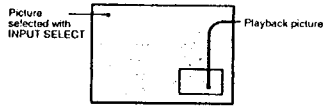
If you want to insert a small picture, press P in P.
The subsidiary picture selected using INPUT SELECT will appear on the TV screen.



To change the position of the subsidiary picture
Press SHIFT repeatedly until the desired position is reached.



To swap pictures
Press P in P again.
The sound is also switched.

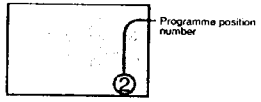


To turn off the subsidiary picture
Press DIGITAL OFF.

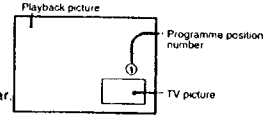
Using TV Scan

You can watch all preset TV programmes in succession while you are watching a TV programme or during playback.

During watching a TV programme
Press TV SCAN.
After all preset programmes are scanned, the first programme will appear again.

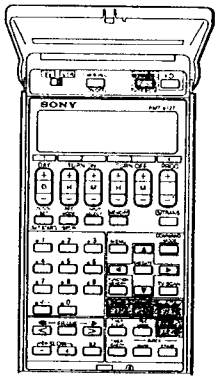


During playback
Press TV SCAN.
Each preset programme will be displayed on the subsidiary screen for a few seconds in order of programme position numbers. After all the preset programmes are scanned, the first programme will appear.



To stop scanning at the programme position you want to watch
Select the programme position you want to watch using the programme position number buttons on the remote control. Or you can use PROG +/– on the remote control or PROGRAM +/– on the VCR or you can press the PROG function button so that the indicator beside the button lights up and turn the JOG dial on the remote control.

To turn off the subsidiary picture
Press DIGITAL OFF.



Notes on the PAY-TV programmes (SLV-825VC models only)

- If the PAY-TV programme is not preset on the VCR, the PAY-TV programme will not appear either on the main screen or the subsidiary screen.
- If you have made VCR-TV connection using the EURO-AV connection, the decoded picture of the PAY-TV programme will appear either on the main screen or on the subsidiary screen, and not appear on both screens at the same time. When you select TUNER or SIMUL using INPUT SELECT, the picture of the PAY-TV programme will appear as follows:

– When the PAY-TV programme is preset to ON, it will appear only on the main screen.
– When the PAY-TV programme is not preset (PAY-TV setting is OFF), it will appear only on the subsidiary screen.
When you select LINE L1, L2 or L3, however, the PAY-TV programme will not appear on the main screen.

Using TV in TV

If you want to watch two TV programmes at the same time, you can tune one with the TV and the other with the VCR. Using the P in P function one will appear in the subsidiary screen, and one will appear on the main screen. The TV and the VCR must be connected with the EURO-AV cable.

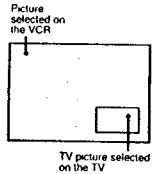
1 Press INPUT SELECT to display "TUNER" in the VCR display panel.

2 Press TV/VTR to turn on the VTR indicator.
The programme selected on the VCR appears on the screen.

3 Press P in P.
The programme selected on the TV appears on the subsidiary screen.

To change the position of the subsidiary picture
Press SHIFT repeatedly until the desired position is reached.

To turn off the subsidiary picture
Press DIGITAL OFF.



How to select the main picture and the subsidiary picture

If you press INPUT SELECT, the picture on the main screen and the subsidiary screen changes as follows. The audible sound is determined according to the input mode selected with INPUT SELECT.

INPUT SELECT position	Main picture	Subsidiary picture
TUNER	The programme selected on the VCR	TV programme selected on the TV
SIMUL	TV programme selected on the VCR	TV programme selected on the TV
LINE L1	TV programme selected on the TV	TV programme selected on the VCR
LINE L2	Picture of the equipment connected to LINE IN 2 VIDEO	TV programme selected on the VCR
LINE L3	Picture of the equipment connected to LINE 3 (EURO-AV)	TV programme selected on the VCR

Notes

- You cannot change the programme position of the VCR if it appears on the subsidiary screen.
- If you have preset "PAY-TV" to "ON" in the TUNER PRESET menu, you can't select "LINE 3."

The input mode indicator changes cyclically as follows:

Using the On-Screen Menus

When you make a specific setting or select a series of tape operations while using yous VCR, you sometimes need to open the MENU screen. The following table shows you when and why you need to select the menu options.

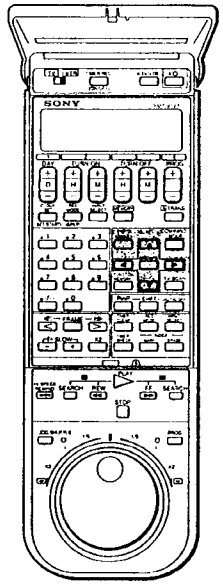
AUTO MENU	Select this item to perform certain operations in sequence. See page 37 for details.
AUTO REPEAT	Select this item to repeat certain portions of a tape. See page 39.
MODE SET	Select this item to customize your VCR. See page 40.
TUNER PRESET	See page 9.
LANGUAGE	Select this item to display the menu in your language (ENGLISH, DEUTSCH, FRANÇAIS, ITALIANO, ESPAÑOL, NEDERLANDS) . See page 12.
FUNCTION MEMORY	Select this item to keep a certain operation in memory. See page 38.
DEMON-STRATION	Select this item to get an overview of the on-screen menus. While the VCR is showing a sequence of the DEMONSTRATION menu, you can stop at the desired screen by pressing EXE. Press EXE again to start again. To quit the demonstration, press any button except for EXE.

Before you begin

- Use ▲ or ▼ to move the cursor (▶).
- Use ◀ or ▶ to select items.
- To quit setting in the middle of the procedure, press MENU.

Assigning a Desired Operation-AUTO MENU/ FUNCTION MEMORY

You can get the VCR to perform certain functions in sequence automatically. The AUTO MENU guides you to your desired sequence of operations. You can choose from the eight AUTO MENU choices. Moreover, one of the AUTO MENU choices you selected can be assigned to the FUNCTION MEMORY button on the remote control.



Note on AUTO MENU operation
AUTO MENU cannot be operated if there is no cassette installed or if the tape is being transported. A short beep alerts you if the AUTO MENU is not operable.

Note on "GO TO REC START-PLAY"
The recording start point data will be erased from the memory after the following operations, and "GO TO REC START-PLAY" will not be operable.
- When COUNTER RESET is pressed.
- When cassette is ejected and re-inserted.
- When HI-SPEED REWIND is pressed.

AUTO MENU Setting

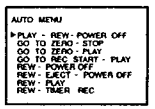
1 Press MENU.
The main MENU appears.

2 Press ▲ or ▼ of the cursor keys to move the cursor (▶) to AUTO MENU.

3 Press EXE.
The display changes to the "AUTO MENU" display.

4 Press ▲ or ▼ of the cursor keys to select the menu choice you want. For menu choices, see below.

5 Press EXE to return to the original screen.
The selected operation will begin. The menu choice you selected will be superimposed on the TV screen for a few seconds.
The AUTO indicator will light up in the VCR display panel during AUTO MENU operation.



Menu choices

■ PLAY-REW-POWER OFF
Plays back the tape, rewinds the tape when it reaches the end, and turns off the power.

■ GO TO ZERO-STOP
Searches for the counter zero point and stops.

■ GO TO ZERO-PLAY
Searches for the counter zero point and starts playback.

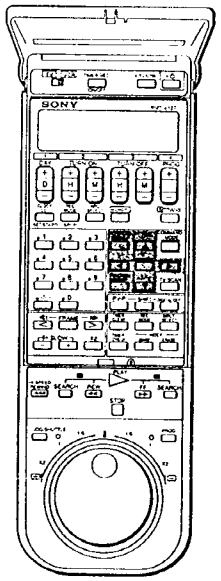
■ GO TO REC START -PLAY
Searches for the recording start point and starts playback.

■ REW-POWER OFF
Rewinds the tape to the beginning and turns off the power.

■ REW-EJECT-POWER OFF
Rewinds the tape to the beginning, ejects the cassette, and turns off the power.

■ REW-PLAY
Rewinds the tape to the beginning and starts playback.

■ REW-TIMER REC
Rewinds the tape to the beginning and puts the VCR in timer recording standby mode when the timer is preset.

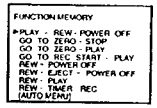


FUNCTION MEMORY

1 Press MENU.
The main MENU appears.

2 Press ▲ or ▼ of the cursor keys to move the cursor (▶) to FUNCTION MEMORY.

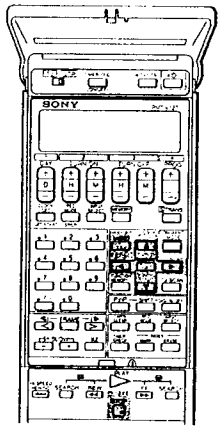
3 Press EXE.
The FUNCTION MEMORY menu appears.



4 Move the cursor (▶) to the menu choice you want and press EXE.

If you have selected [AUTO MENU], you can directly go to the AUTO MENU simply by pressing FUNCTION MEMORY, without displaying the main MENU. This is a short cut to the AUTO MENU.

For the menu choices, see the previous page.
The menu choice you selected will be activated every time you press FUNCTION MEMORY when the VCR is in stop mode.



Repeating Playback Automatically —AUTO REPEAT

You can make the VCR repeat playback of a certain portion of the tape automatically.

1 Press MENU while the VCR is in the stop mode.
The main MENU appears.

2 Press ▲ or ▼ of the cusor keys to move the cursor (▶) to AUTO REPEAT and press EXE.
The AUTO REPEAT menu appears.

3 Press ▲ or ▼ of the cursor keys to move the cursor (▶) to the menu choice you want and press EXE.
The VCR will rewind or advance the tape rapidly to the start point of the selected repeat portion and start playback. Playback of that portion will be repeated five times and then the VCR will rewind the tape to the start point. The AUTO indicator will light in the VCR display panel during AUTO REPEAT operation.

To stop playback

Press ■ STOP on the VCR or on the remote control.

Menu choices

■ **TAPE START-TAPE END**
Repeats playback from the beginning to the end of the tape.

■ **TAPE START-VIDEO END**
Repeats playback from the beginning of the tape to the end of the recorded portion.

■ **TAPE START-COUNTER 0***
Repeats playback from the beginning of the tape to the counter zero point.

■ **COUNTER 0*-TAPE END**
Repeats playback from the counter zero point to the end of the tape.

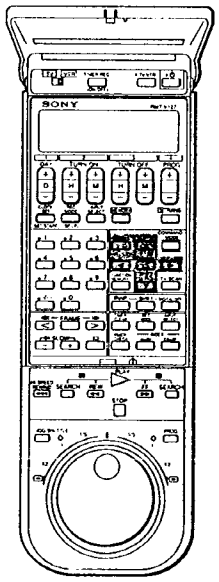
■ **COUNTER 0*-VIDEO END**
Repeats playback from the counter zero point to the end of the record portion of the tape.

* Before activating AUTO REPEAT, you must press COUNTER RESET on the VCR or on the remote control to set the tape counter to 0H00M00S at the desired point.

Notes on AUTO REPEAT operation
- If you press any tape operation button during repeat playback, AUTO REPEAT will be released.
- AUTO REPEAT cannot be operated if there is no cassette installed or if the VCR is in modes other than stop mode. A short beep alerts you if the AUTO REPEAT is not operable.

Note on "VIDEO END"
The VCR normally detects a blank of about 10 seconds on the tape as "VIDEO END."
However, for about 30 seconds from the beginning of the tape, the VCR does not do this.

AUTO REPEAT will not work correctly in the following cases
- When there is a blank of more than 10 seconds in the assigned repeat portion (more than 40 seconds at the beginning).
- When there is a blank of less than 10 seconds after the recorded portion to be played back repeatedly.
- When the tape is recorded to its end. (Select the menu choice including "TAPE END.")



Customizing Your VCR—MODE SET

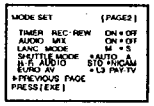
You can customize your VCR using the MODE SET menu.

1 Press MENU.
The main MENU appears.

2 Press ▲ or ▼ of the cursor keys to move the cursor (▶) to MODE SET.

3 Press EXE.
The MODE SET menu appears.
If the MODE SET [PAGE 1] menu is displayed on your TV screen, press ▲ or ▼ of the cursor keys to move the cursor (▶) to "NEXT PAGE", then press EXE.
The MODE SET [PAGE 2] menu appears.

[PAGE 1] menu



[PAGE 2] menu

4 Press ▲ or ▼ of the cursor keys to move the cursor to the menu choice you want, then press ◄ or ► of the cursor keys to move the dot (•) to select the item.
For the menu choices, see below.

5 Press EXE to store the setting.

Menu choices

■ **CLOCK DISPLAY**
Select "ON" to display the current date and time in the data screen, and select "OFF" to turn off the current date and time in the data screen.

■ **DIMMER**
Select "ON" to make the display window dimmer and select "OFF" to make the display window brighter.

■ **SIMUL AUDIO IN**
Select "L1" to select the audio source from the LINE IN 1 connector during simul recording and select "L2" to select the audio source from the LINE IN 2 jacks during simul recording.

■ **RF MODULATOR**
Select "ON" if you have made the VCR-TV connection via the aerial socket only.
Select "OFF" if you have made the VCR-TV connection via the EURO-AV connector.
If interference occurs when you use the aerial socket, make the EURO-AV connection and set the RF MODULATOR to "OFF."

Important
Do not set RF MODULATOR to "OFF" when you have made the VCR-TV connection via the AERIAL IN socket only.
If the RF MODULATOR is set to "OFF", no picture will appear on the TV screen. In this case, press the CL button inside the lower drop-down panel with a pointed object. Since this will clear all stored information (e.g., the clock and any preset information), you must set them once again.

Note
The position of the cursor remains the same as long as the mains lead is connected.

■ **BACK COLOUR**
Select the background colour you want : BL (blue), GR (green) or PK (pink).

■ **TIMER REC-REW**
Select "ON" to automatically rewind the tape after timer recording is over and select "OFF" to cancel this setting.

■ **AUDIO MIX**
Select "ON" to make the AUDIO MONITOR button inoperative so that the sounds of the hi-fi video and normal audio tracks are always output and select "OFF" to make the AUDIO MONITOR button operative so that you can select the sound to hear (for details, see page 47).

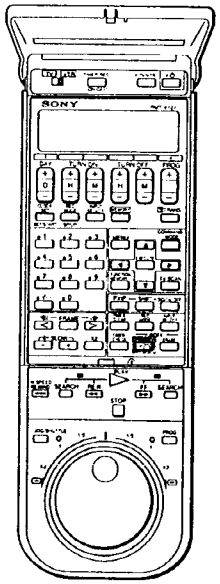
■ **LANC MODE**
Select "M" to control the other VCR using the synchronized editing function of this VCR and select "S" in any other cases (for details, see page 58).

■ **SHUTTLE MODE**
Normally set to "AUTO." The VCR detects automatically whether the other VCR has a reverse slow-motion playback function or not. If the other VCR doesn't perform tape movement as you operated, select "A."
When you select "A", the tape will come to move only in the forward direction, and the JOG dial doesn't work (for details, see page 58).

■ **Hi-Fi AUDIO (SLV-825UB and SLV-825NC models only)**
Select "NICAM" to record a NICAM broadcast on a Hi-Fi audio track and select "STD" to record only standard sound on a Hi-Fi audio track (for details see page 46).

■ **EURO AV (SLV-825VC models only)**
Select "PAY-TV" to use the EURO-AV (LINE 3) PAY -TV DECODER connector to connect a PAY-TV decoder only after the PAY-TV presetting has been done. Select "L3" to use this connector as a LINE 3 connector temporarily (for details, see page 31).

Index Function



You can find specific scenes easily using the markings (index points) recorded on a cassette. This function is called the Index Function.
You can mark an index anywhere on a tape, so that you can easily find the specific point later on. Index works as a divider between scenes, and is not numbered. So, when you specify the index mark later, you have to specify the relative position from the current position. (The first index, the second index....from the current position.)
You can mark and erase index signals during playback, but while recording, you cannot erase them.

Marking Index Signals

Where you mark an index, the INDEX indicator flashes in the VCR display panel and the INDEX MARK indicator appears on your TV screen.

Automatic Index Mark

An index signal is automatically recorded at the beginning of a scene when you start recording.

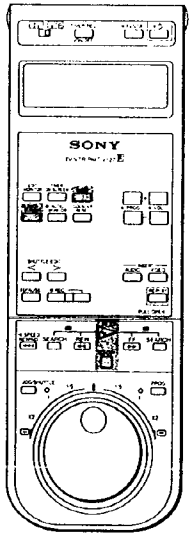
Manual Index Mark

When recording or playing a cassette, you can manually mark an index signal by pressing INDEX MARK.

When you mark an index signal during playback, the recorded sound may be interrupted but the audio signal will not be erased.

Notes on marking indexes

- Leave an interval of at least 2 minutes between indexes so that the VCR can detect the signals correctly.
- You cannot mark an index signal in the following cases:
  - On a cassette whose safety tab has been removed
  - On an unrecorded portion of a tape
  - Immediately before a point on the cassette where the tape speed (SP or LP) changes.



Playing Back from the Index Point—Index Scan

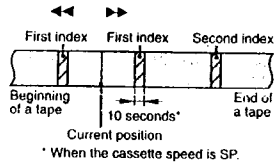
Here's how to find and play a programme you've marked with an index signal.

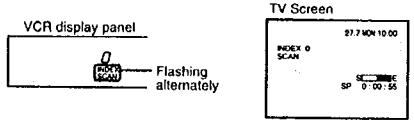
1 Insert an indexed cassette into your VCR

2 Press DATA SCREEN to display the data screen.

3 Press INDEX once.
The INDEX and SCAN indicators flash alternately in the VCR display panel and the INDEX SCAN indicator appears on the TV screen.

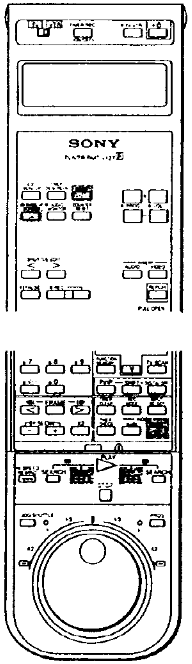
4 Press ◀◀ to find the previous programme or ▶▶ to find the next programme.
The index scan locates the next index signal and plays about 10 seconds of tape prior to the signal (10-second preview). The VCR then rewinds or advances to the next index signal.
Every time the VCR finds an index signal, 10-second preview begins.





5 When you find the programme you want, press ▶ PLAY during the 10-second preview. Playback starts from that point.

To stop index scan underway
Press ▶ PLAY or ■ STOP.

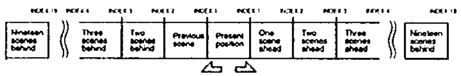


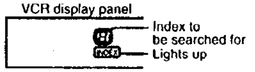
Locating an index— Index Search

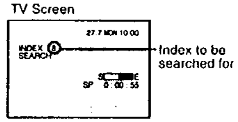
Locate an index by indicating how many index signals ahead or behind the scene is from the tape's current position. You can specify up to the 19th index point either ahead or behind the current position.

1 Press DATA SCREEN to display the data screen.

2 Press INDEX until the index number you want appears.







3 Press ►► FF to find an upcoming index signal or ◄◄ REW to find a prior index signal.
The cassette advances or rewinds to find the signal.
Each time an index signal is detected, the index number decreases.
When the index number reaches 0, it means you've located the specified scene and your VCR will begin to play.

Erasing Index Signals

To remove any unwanted index signals, follow these steps:

1 Press INDEX once during playback or stop mode.

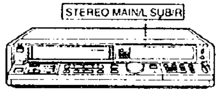
2 Press ►► FF to find the next scene or ◄◄ REW to find the previous scene. Each time an index is detected, the VCR plays back the indexed scene for approximately 10 seconds. It then rewinds or advances to the next index signal. This 10 second preview lets you decide whether you've located the index mark you want to erase.

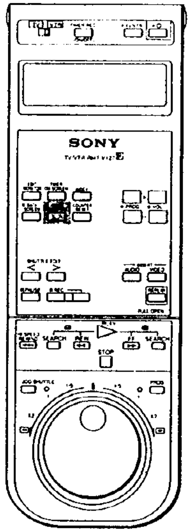
3 Press INDEX ERASE during 10 seconds preview.
"INDEX ERASE" is displayed on the TV screen. The VCR automatically rewinds the tape to a position before that index, and erase the index. After one index is erased, the next index is located.

Note
You cannot erase an index signal at the beginning of the tape.

-25-

Recording Stereo/Bilingual Programmes

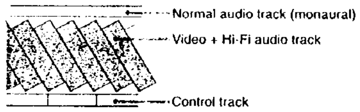




SLV-825/825VC/825NC Models

The SLV-825/825VC/825NC can receive and record stereo/bilingual programmes based on the "Zweiton" system adopted in Germany. Recording of the Zweiton system programmes is automatically done. A stereo or bilingual programme is recorded on the Hi-Fi audio track and normal audio track as shown below.

Hi-Fi recording pattern on a tape



Where the sound is recorded

Stereo programme
When a stereo programme is received, "STEREO" appears in the VCR display panel and the sound is recorded as follows:
Left channel: on the left channel of the Hi-Fi audio track
Right channel: on the right channel of the Hi-Fi audio track
Mixed of the left and right channels (monaural): on the normal audio track

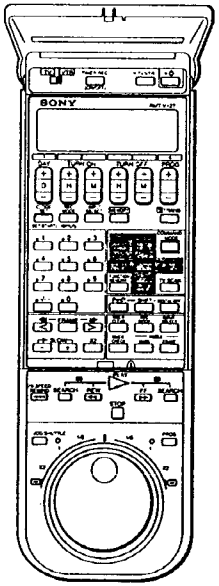
Bilingual programme
When a bilingual programme is received, "MAIN/L" appears in the VCR display panel and the sound is recorded as follows.
Main: on the left channel of the Hi-Fi audio track and on the normal audio track
Sub: on the right channel of the Hi-Fi audio track

How to select the sound you hear

Stereo programme
The AUDIO MONITOR button does not function for the stereo programmes of the Zweiton system.

Bilingual programme
When the VCR receives a bilingual programme, "MAIN/L" appears in the VCR display panel and you can select the sound to hear.
Press AUDIO MONITOR several times until you can hear the sound you want.
With each press, the sound is cyclically changed in the following order.

Display	Sound heard
MAIN/L	Main sound
SUB/R	Sub sound
MAIN/L SUB/R	Main sound on the left channel Sub sound on the right channel



SLV-825UB/825NC Models

The SLV-825UB/825NC can receive and record stereo/bilingual programmes based on the "NICAM" system adopted in the United Kingdom and Nordic countries. NICAM broadcasting has two-channel digital sound called NICAM L and R channels in addition to the standard sound. The NICAM L and R are assigned to the stereo left and right channels or the main and sub sounds of a bilingual programme. The standard sound of most NICAM broadcasts is the mixed sound of the left and right channels for a stereo programme, and the main sound for a bilingual programme.

Recording NICAM broadcasts

You need to select "NICAM" of "HI-FI AUDIO" in the MODE SET [PAGE 2] menu.

1 Before recording a NICAM broadcast, press MENU.
The main MENU appears.

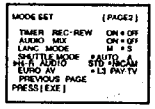
2 Press ▲ or ▼ of the cursor keys to move the cursor (▶) to MODE SET.

3 Press EXE.
The MODE SET menu appears.
If the MODE SET [PAGE 1] menu is displayed on your TV screen, press ▲ or ▼ of the cursor keys to move the cursor (▶) to "NEXT PAGE", then press EXE.

4 Press ▲ or ▼ of the cursor keys to move the cursor (▶) to Hi-Fi AUDIO.

5 Select NICAM using ◀ or ▶ of the cursor keys.

6 Press EXE to store the setting.



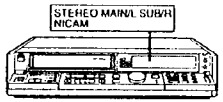
With NICAM setting, NICAM broadcasts will be recorded as shown in the following table.

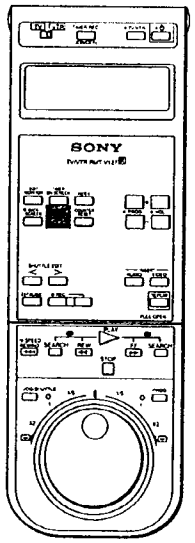
Track	Sound heard	
	Stereo	Bilingual
Hi-Fi audio left channel	Left channel	Main
Hi-Fi audio right channel	Right channel	Sub
Normal audio	Standard	Standard

Note
When there is no NICAM broadcast, the standard sound will be recorded on both the Hi-Fi video track and the normal audio track.

To record the standard sound only

Follow the operation above and set Hi-Fi AUDIO to STD in step 5.
The standard sound will be recorded on the left and right channels of the Hi-Fi video track and the normal audio track.





How to select the sound you hear

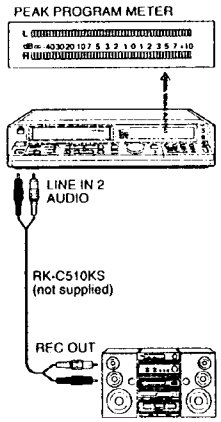
Stereo programme
When a stereo programme is received, "STEREO" and "NICAM" appears in the VCR display panel and you can select the sound to hear.
Press AUDIO MONITOR.
With each press, the STEREO (NICAM L and R channels) or the standard sound is selected alternately.

Display panel	Sound heard
STEREO	Left channel sound on the left channel and right channel sound on the right channel
No indication	Standard sound

Bilingual programme
When a bilingual programme is received, "NICAM" and "MAIN/L" appears in the VCR display panel and you can select the sound to hear.
Press AUDIO MONITOR several times until you can hear the sound you want.
With each press, the sound is cyclically changed in the following order.

Display panel	Sound heard
MAIN/L	Main sound
SUB/R	Sub sound
MAIN/L, SUB/R	Main sound on the left channel and sub sound on the right channel
No indication	Standard sound

Audio Recording



The Hi-Fi recording system of this VCR allows recording of high quality stereo sound from an FM tuner, audio system, or other audio equipment.

Before you begin

- Connect your audio system to the LINE IN 2 AUDIO jacks using the RK-C510KS audio connecting cable (not supplied).
- Set INPUT SELECT to LINE L2.
- Select REC MODE, SP or LP.

Adjusting the Audio Recording Level

Play the recording source. While observing the PEAK PROGRAM METER on the VCR, adjust the REC LEVEL controls as follows.

When recording from records: Adjust the level so that the right-most element (+10) lights up sometimes.

When recording from CDs or using a PCM processor: Adjust the level so that the right most element (+10) lights up only when the signal is input at its maximum level.

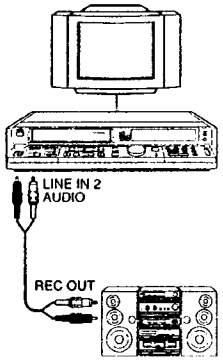
Recording

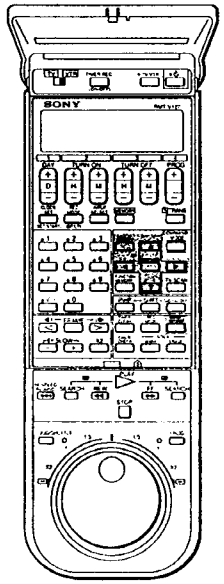
The recording procedure is the same as "Recording While Watching the TV Programme" on page 20.

PCM Recording and Playback

You can perform PCM recording and playback on the video track by connecting a PCM digital audio processor to the LINE IN and OUT VIDEO jacks on this VCR. For details, refer to the instruction manual of the PCM digital audio processor.

Caution
To avoid damaging the speakers due to a wide dynamic range of a Hi-Fi recorded tape/disc, turn down the volume of the TV before playing back a Hi-Fi recorded tape/disc.





Simulcast Recording

You can record a TV programme and the sound from other equipment such as an FM tuner, simultaneously. The audio signals from the TV receiver are recorded on the normal audio track and those from the connected equipment on the Hi-Fi track.

Before you begin

- Connect your audio equipment to the EURO-AV (LINE 1) connector or the LINE IN 2 AUDIO jacks.
  The EURO-AV (LINE 3) (EURO-AV (LINE 3) PAY-TV DECODER for the SLV-825VC Model) connector cannot be used for a simulcast.
- Press INPUT SELECT on this VCR to indicate "SIMUL" in the VCR display panel.
- Other settings are the same as "Audio Recording" on the previous page.

Selecting the audio input

1 Press MENU.
The main MENU appears.

2 Press ▲ or ▼ of the cusor keys to move the cursor (▶) to MODE SET.

3 Press EXE.
The MODE SET menu appears.
If the MODE SET [PAGE 2]menu is displayed on your TV screen, press ▲ or ▼ of the cursor keys to move the cursor (▶) to "PREVIOUS PAGE", then press EXE.
The MODE SET [PAGE 1] menu appears.

4 Press ▲ or ▼ of the cursor keys to move the cursor (▶) to SIMUL AUDIO IN.

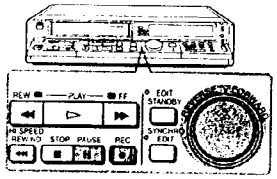
5 Move the dot using ◀ or ▶ of the cursor keys to L1 or L2 whichever your audio equipment is connected to.
Select L1 when your audio equipment is connected to the EURO-AV (LINE 1) connector, and select L2 when your audio equipment is connected to the LINE IN 2 AUDIO jacks.

6 Press EXE to store the setting and return to the original screen.

Recording

The recording procedure is the same as "Recording While Watching the TV Programme" on page 20.

Cutting out the Unwanted Scenes— SHUTTLE EDIT

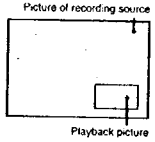


During Recording

If you wish to cut out scenes such as TV commercials, you can pause recording and play back the tape in the reverse direction until the beginning of an unwanted scene is reached. Then, record over it. This feature only works from the VCR.
During timer-activated recording, you cannot use this function.
The VCR enters the P in P mode so that you can check the pictures to be edited on the screen.

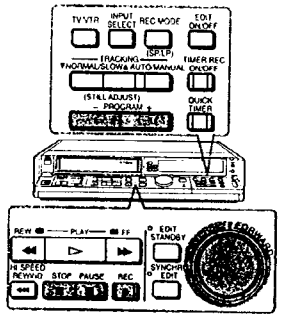
1 Press II PAUSE during recording.
The VCR enters recording pause mode.

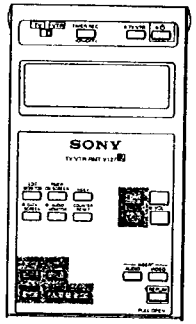
2 Turn the JOG dial and the SHUTTLE ring on the VCR counterclockwise to rewind the tape until the unwanted scene appears.
The VCR will enter P in P mode and the playback picture will appear on the subsidiary screen.

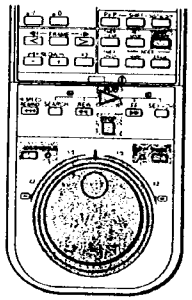


If you turn the JOG dial, you can select the playback speed by how fast you turn it, and if you turn the SHUTTLE ring, you can select the playback speed by how far you turn it .
When you release the dial or ring, the VCR enters recording pause mode and the subsidiary screen disappears from the TV screen.

3 Press II PAUSE when a wanted scene appears on the screen.
Recording starts.







Note
The picture may be distorted a moment at the cut-out point (recording end point).

During Playback

You can re-record onto an unwanted portion of a pre-recorded cassette.
Use the JOG dial and the SHUTTLE ring on the VCR or on the remote control.

1 Press II PAUSE at the end of the unwanted scene during playback.
The VCR enters playback pause mode.

2 Turn the dial or ring until the beginning of the unwanted scene appears on the screen.
If you turn the JOG dial, you can select the playback speed by how fast you turn it, and if you turn the SHUTTLE ring, you can select the playback speed by how far you turn it .
When you release the ring, the VCR enters playback pause mode.
You can also use the SHUTTLE EDIT buttons on the remote control to find the scene.

3 Press ●REC on the VCR or ●RECs on the remote control.
The VCR enters recording pause mode.

4 Select a new programme for re-recording.
Press PROG +/– on the flap of the remote control or PROGRAM +/– on the inside surface of the upper drop-down panel of the VCR to select the programme position.
You can also use the jog dial to select the programme position. To use this, press the PROG function button to light the indicator beside the button. Turn the jog dail clockwise for higher numbered programme positions or couterclockwise for lower numbered programme positions.
The programme number will change in the VCR display panel and on the TV screen.

5 Press II PAUSE when the scene to be recorded begins to appear on the screen.
Recording begins.

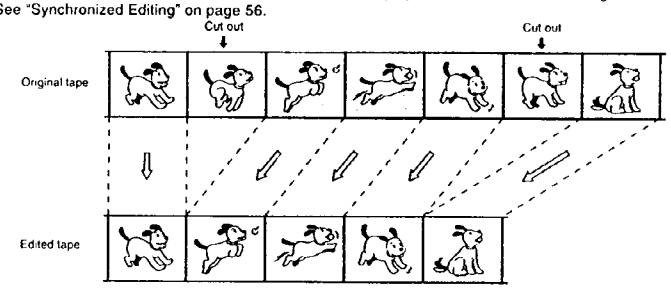
To stop recording, press ■ STOP.

Overview of the Editing Functions

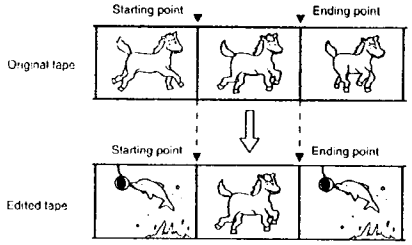
Using a second VCR, you can record programmes from one VCR to the other.
The following are the tape editing functions available on the VCR. You can perform these editings using the synchronized editing function or manually (not using the synchronized editing). In this section, the editing using the synchronized editing function will be mainly explained.

- **To make a copy of a tape.**
  — See "Tape Dubbing" on page 53.

- **To edit out unwanted scenes using the synchronized editing function (Synchronized Assemble Editing)**
  You can use the synchronized editing function to perform assemble editing and insert editing if your other VCR has a control L connector. Using this function controls both the playback VCR and the recording VCR simultaneously.
  — See "Synchronized Editing" on page 56.



- **To insert a new picture and/or sound onto a previously recorded tape**
  — See "Insert Editing" on page 61.



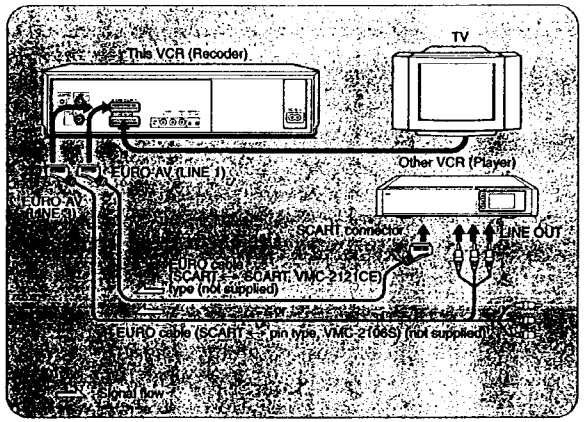
Tape Dubbing

Editing from the Other VCR

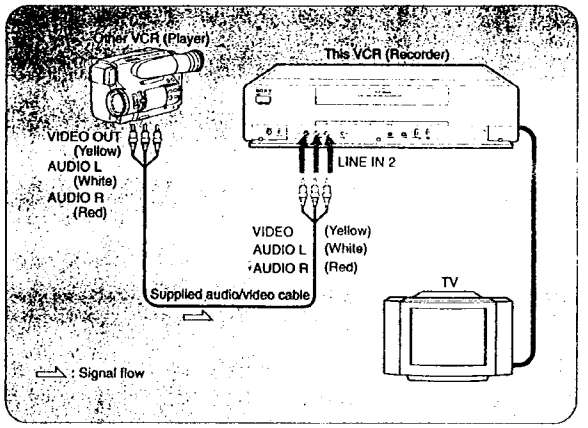
Here's how to edit from the other VCR (such as an 8mm video camera recorder or a VHS-format VCR for playback) when using this VCR for recording.
You can use the video/audio jacks on the front panel, or the 21-pin EURO-AV connector on the rear panel to perform this operation.

Connections

When using the 21-pin EURO-AV connector

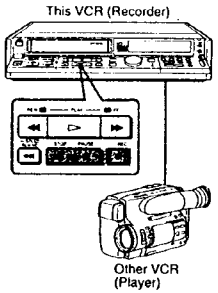


When using the front panel video/audio jacks



Notes

- If the other VCR is a monaural type, connect the white plug to LINE IN 2 AUDIO L and leave the red plug unconnected. This enables the sound to be separated into the right and left channels. If the other VCR is a stereo type, make connections with both the red and white plugs.
- Press INPUT SELECT on this VCR to indicate LINE L1, LINE L2 or LINE L3 in the VCR display panel to match the jack to which you have connected the other VCR.



Before you begin

- Select the tape speed (SP or LP) with REC MODE.
- Press the INPUT SELECT button to select LINE IN 1 or LINE IN 2.
  (When connected to the rear panel, select LINE IN 1. When connected to the front panel, select LINE IN 2).
  L1 or L2 appears in the VCR display panel.
- If your playback VCR has an editing function, select it to reduce static and improve reception.
- Adjust the REC LEVEL control (see "Audio Recording" on page 48).

Operation

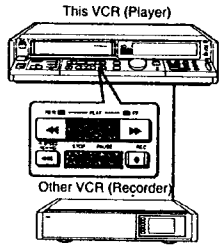
1 Insert a blank cassette into this VCR (recorder).

2 Turn on the other VCR (player) and insert a source cassette.

3 Locate the playback starting point and select the playback pause mode on the other VCR (player).

4 Locate the recording starting point and select the recording pause mode on this VCR (recorder).

5 Press ❚❚PAUSE on both VCRs.
For best result, press ❚❚PAUSE on the other VCR (player) just before pressing ❚❚PAUSE on this VCR (recorder).
When you've finished editing, press ■ STOP on both VCRs.

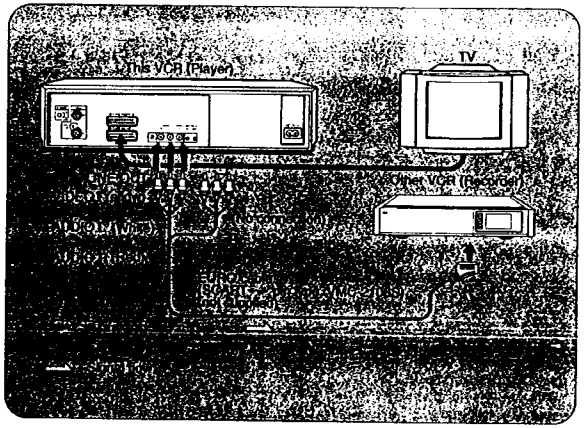


Notes
- If your recording VCR is a monaural type, make connections using the VCM-910MS/920MS cable (not supplied).
- When connecting the VCRs, do not connect both LINE IN and LINE OUT jacks on your VCR simultaneously. Doing so may cause a humming noise.

Editing onto the Other VCR

Here's how to use this VCR as the playback VCR and the other VCR as the recording VCR.

Connections



Before you begin

- Press the EDIT button so that the EDIT indicator lights up in the VCR display panel.
  If your recording VCR has an editing function, it should also be selected to improve reception.
- Press AUDIO MONITOR on the remote control to select the sound to be recorded.

Operation

1 Turn on the other VCR (recorder) and insert a blank cassette.

2 Insert a source cassette into this VCR (player).

3 Locate the playback start point and select the playback pause mode on this VCR (player).

4 Locate the recording start point and select the recording pause mode on the other VCR (recorder).

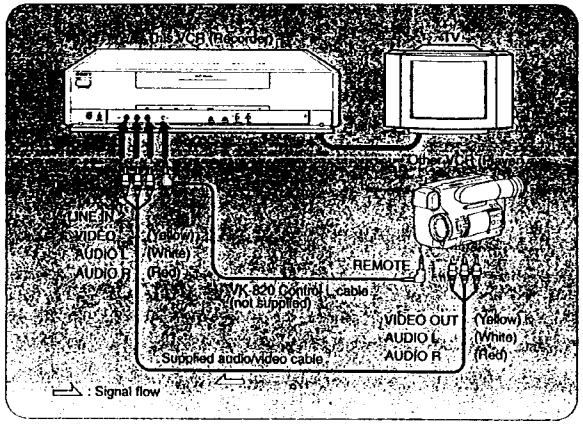
5 Press ❚❚PAUSE on both VCRs.
For best results, press ❚❚PAUSE on this VCR (player) just before pressing ❚❚PAUSE on the other VCR (recorder).
When you've finished editing, press ■STOP on both VCRs.

Synchronized Editing

If your other VCR has a control L connector, and/or CONTROL S IN connector, you can take advantage of a feature called "Synchronized Editing" that controls both VCRs (recording VCR and playback VCR), and releases the pause when the SYNCHRO EDIT button is pressed. To use this function, you must connect the control cable in addition to the connections of the audio and video cables. There are two types of control cables: control L (LANC or REMOTE) cable or control S cable. Which cable you need to use depends on the connectors that your other VCR has.

Connecting Video Equipment with the LANC connector

When using the front panel jacks



Important

After you have made the connections, make sure you set the LANC mode (see page 58).

About the ⇳ (LANC)

LANC stands for Local Application Control System.
The LANC connector is used for controlling the tape transport of video equipment and peripherals connected to it.
This connector has the same function as the connectors indicated as CONTROL L or REMOTE.

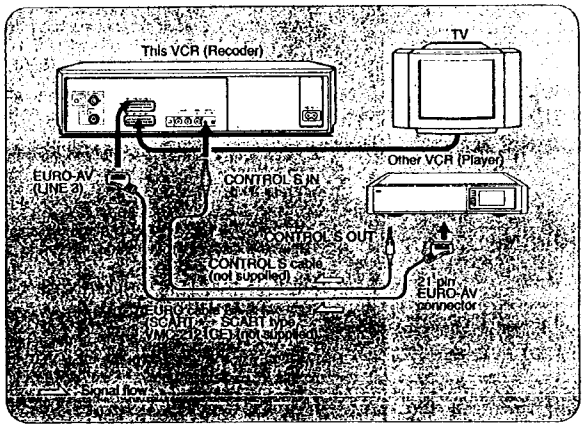
Notes

- When connecting the VCRs, do not connect both LINE IN and LINE OUT jacks on your VCRs simultaneously. Doing so may cause a humming noise.
- When the REMOTE connector of the other VCR is a stereo mini-mini plug, use the VK-820 control L cable (not supplied). If it is a 5-pin DIN connector, use the VK-810 control L cable (not supplied).
- If your playback VCR is a monaural type, connect the white plug to LINE IN 2 AUDIO L on this VCR. This lets you record the sound of the playback VCR on both channels of this VCR.
- If another VCR has both the LANC connector and the CONTROL S connector, use the LANC connector. Do not make the LANC and CONTROL S connections simultaneously.

Note

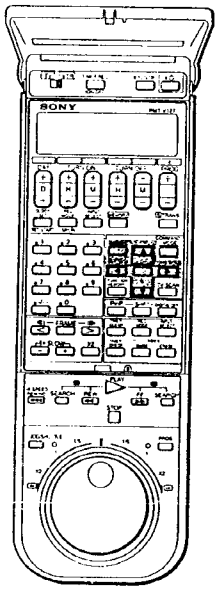
When connecting the other VCR to LINE IN 2 on the front, use the supplied video/audio connecting cable. If the other VCR is a monaural type, connect to LINE IN 2 AUDIO L using the white plugs. This enables the sound to be separated into the right and left channels. Leave the red plugs unconnected.

Connecting Video Equipment with the CONTROL S connector



When using the CONTROL S cable

Set the commander mode of this VCR and the other video equipment to the same position.
If the other video equipment has the synchronized function, use the SYNCHRO EDIT button on other equipment.
Comparing to the synchronized editing using the LANC connector, the synchronized editing using the CONTROL S connector only enables you to pause both VCRs and release the pause mode of both VCRs.



Setting the LANC MODE and SHUTTLE MODE

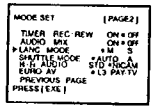
After you have made the control L cable connection on page 56, you must choose the LANC MODE and SHUTTLE MODE setting. The LANC MODE setting decides which VCR controls which. Use the MODE SET [PAGE 2] for this setting. Here's how to do this setting.

1 Press MENU to display the main MENU.

2 Press ▲ or ▼ of the cursor keys to move the cursor (▶) to "MODE SET".

3 Press EXE.
The MODE SET menu appears.
If the MODE SET [PAGE 1] menu is displayed on your TV screen, press ▲ or ▼ of the cursor keys to move the cursor (▶) to "NEXT PAGE", then press EXE.

4 Press ▲ or ▼ of the cursor keys to move the cursor (▶) to "LANC MODE."



5 Select "M" or "S" using ◀ or ▶ of the cursor keys.
When you want to control the other VCR from this VCR, select "M."
When you want to control this VCR from the other VCR, select "S."

6 Press ▲ or ▼ of the cursor keys to move the cursor (▶) to "SHUTTLE MODE."

7 Select "AUTO" or "A" using ◀ or ▶ of the cursor keys.
Normally set to "AUTO." The VCR detects automatically whether the other VCR has a reverse slow-motion playback function or not. If the other VCR doesn't perform tape movement as you operated, select "A."
When you select "A", the tape will come to move only in the forward direction, and the JOG dial doesn't work (for details, see page 41).

8 Press EXE to store the setting.
The TV screen returns to the original screen.

Synchronized Assemble Editing

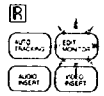
You can display both the picture of the playback VCR and recording VCR simultaneously on the TV screen. This allows you to perform editing while previewing editing scenes.

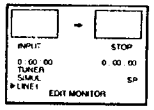
Before you begin

- Press the REC MODE button on the VCR or on the remote control to select the tape speed (SP or LP).
- Check the SHUTTLE MODE setting (see page 58).

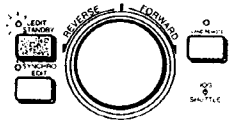
1 Insert a recorded cassette into the other VCR and insert a cassette for recording into this VCR.

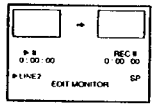
2 Press EDIT MONITOR.
The EDIT MONITOR screen appears on the TV screen.



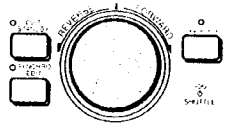


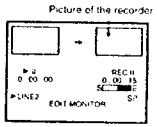
3 Press EDIT STANDBY.
This VCR (recorder) will enter recording pause mode, the other VCR (player) enters playback pause mode.
The EDIT STANDBY indicator on the front panel of this VCR lights up.
The LINE IN 2 input is automatically selected. If other VCR (player) is connected to the rear panel, press the INPUT SELECT button to select LINE IN 1 or LINE 3.
The LANC MODE setting is automatically set to "M."





4 Locate the starting point where you want to begin recording, using the JOG dial and the SHUTTLE ring.

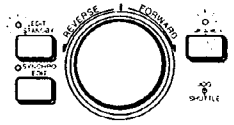


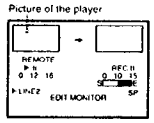


(Continued)

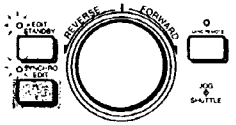
☆ Now you should determine the starting point where the player begins playback.

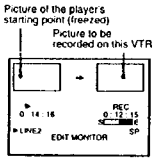
5 Press LANC REMOTE.
The LANC REMOTE indicator lights up and locate the playback starting point, using the JOG dial and the SHUTTLE ring.



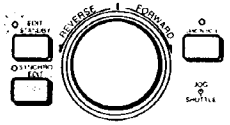


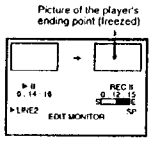
6 Press SYNCHRO EDIT.
The SYNCHRO EDIT indicator lights up.
The pause mode of the playback VCR and the recording VCR are released, and the recording starts.





7 Press SYNCHRO EDIT at the scene where you want to stop recording.
The playback VCR and recording VCR enter pause mode.





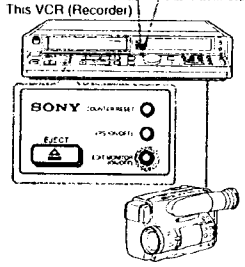
To edit another scene
Repeat steps 4 through 7.

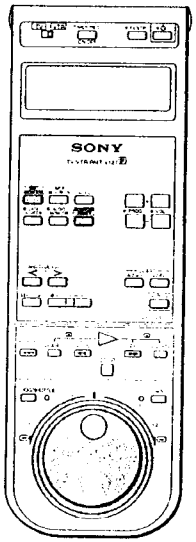
To stop editing
Press EDIT STANDBY.
Both the playback VCR and the recording VCR stop.

"Advanced Synchro Edit"
When you connect this VCR with a video camera recorder (camcorder) or another VCR which responds to the advanced synchro edit function (such as CCD-V800E, CCD-F550E, and CCD-TR805E, etc), you can take advantage of this precise editing function.

Convenient use of the LANC REMOTE button
If you connect your video camera recorder (camcorder) to your TV using an audio/video cable and to this VCR using the LANC cable, you can control the tape operation of your video camera recorder (camcorder) from this VCR.
If your video camera recorder (camcorder) has a reverse playback function such as –slow playback, –X2 speed playback and –X1 playback, you can control the reverse operation using the JOG dial and the SHUTTLE ring (for details, see page 41).

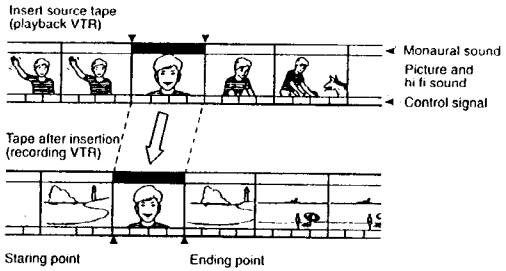
Insert Editing





Inserting a New Picture and/or Sound

You can easily insert a new picture and/or sound onto a pre-recorded tape. This editing is useful to replace an unnecessary scene (or sound) with another scene (or sound).



Before You Begin

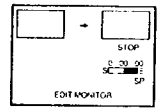
- For connection, see page 56 or 57.(The CONTROL L or CONTROL S connection is not necessary).
- Select the insert source from the equipment connected to EURO-AV (LINE 1), LINE 2 and EURO-AV (LINE 3).

Operation

1 Insert a source tape into the playback VCR. Insert a tape for recording into this VCR.

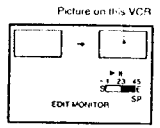
2 Press EDIT ON/OFF.
If the playback VCR is equipped with the EDIT switch, set it to ON.

3 Press EDIT MONITOR on the VCR or on the remote control.

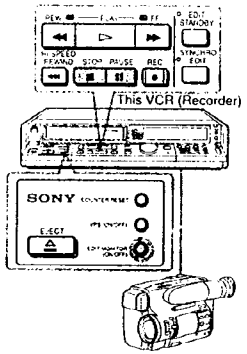


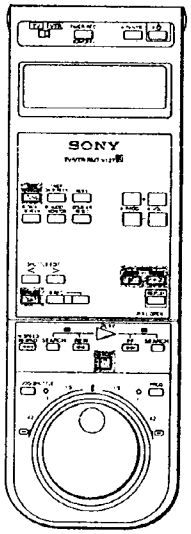
4 On this VCR, locate the ending point and press COUNTER RESET.
The counter will show "0H00M00S" and the ending point will be memorized.

5 On this VCR, locate the starting point and set the VCR to the playback pause mode. JOG/SHUTTLE or SHUTTLE EDIT are useful for this operation.
When you use the JOG/SHUTTLE on the remote control, press the JOG/SHUTTLE button to light the indicator beside the button first.



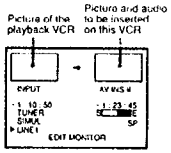
(Continued)





Note
The MIC jack of this VCR is adaptable to the use of a monaural mini plug. If you connect a stereo microphone, the audio will be recorded in monaural.

6 Press AUDIO/VIDEO INSERT.



When the VIDEO INSERT button is pressed
The picture and the sound on the Hi-Fi audio track will be inserted. (The sound on the normal audio track will be retained.)

When the AUDIO INSERT button is pressed
The sound on the normal audio track will be inserted. (The picture and the sound on the Hi-Fi audio track will be retained.)

When the VIDEO and AUDIO INSERT buttons are pressed (AV INSERT)
The picture, sound on the Hi-Fi audio track, and the sound on the normal audio track will be inserted.

The indicator corresponding to the button pressed will light up.
At the ending point (0H00M00S), the insertion will stop automatically.

7 On the playback VCR, locate the starting point where you want to start the insertion and set the VCR to the playback pause mode.

8 Press II PAUSE on both VCRs to start the insertion. At the ending point (0H00M00S), the insertion will stop automatically.

To stop the insertion temporarily
Press II PAUSE.

To stop on-going insertion
Press ■ STOP.

To turn off the EDIT MONITOR display
Press EDIT MONITOR.

When the sound from the microphone is inserted
When the microphone is connected to the MIC jack, the sound from the microphone is automatically selected and it is recorded on the normal track.
To record the sound from the microphone, select AUDIO or AV INSERT.

THIS NOTE IS COMMON FOR PRINTED WIRING BOARDS AND SCHEMATIC DIAGRAMS.
(In addition to this, the necessary note is printed in each block.)
For printed wiring boards:
: indicated a lead wire mounted on the component side.
: indicated a lead wire mounted on the conductor side.
: Through hole.
: Parts mounted on the conductor side.
: Pattern from the side which enables seeing.
: Pattern of the rear side.
Circled numbers refer to waveforms.
Caution :
Pattern face side: (Conductor Side) Parts on the pattern face side seen from the pattern face are indicated.
Parts face side: (Component side) Parts on the parts face side seen from the parts face are indicated.
For schematic diagram:
Caution when replacing chip parts.
New parts must be attached after removal of chip.
Be careful not to heat the minus side of tantalum capacitor, because it is damaged by the heat.
All resistors are in ohms, 1/4 W unless otherwise noted.
Chip resistors: 1/10 W unless otherwise noted.
kΩ : 1000 Ω , MΩ : 1000kΩ .
All capacitors are in μF unless otherwise noted. pF: μμF.
50V or less are not indicated except for electrolytics and tantalums.
All variable and adjustable resistors have characteristic curve B, unless otherwise noted.
: nonflammable resistor.
: fusible resistor.

THIS NOTE IS COMMON FOR PRINTED WIRING BOARDS AND SCHEMATIC DIAGRAMS.
(In addition to this, the necessary note is printed in each block.)

For printed wiring boards:

- ○——— : indicated a lead wire mounted on the component side.
- ●——— : indicated a lead wire mounted on the conductor side.
- ● : Through hole.
- ■ : Parts mounted on the conductor side.
- ▨ : Pattern from the side which enables seeing.
- ▨ : Pattern of the rear side.
- Circled numbers refer to waveforms.

Caution :	
Pattern face side: (Conductor Side)	Parts on the pattern face side seen from the pattern face are indicated.
Parts face side: (Component side)	Parts on the parts face side seen from the parts face are indicated.

For schematic diagram:

- Caution when replacing chip parts.
  New parts must be attached after removal of chip.
  Be careful not to heat the minus side of tantalum capacitor, because it is damaged by the heat.
- All resistors are in ohms, 1/4 W unless otherwise noted.
  Chip resistors: 1/10 W unless otherwise noted.
  kΩ : 1000 Ω , MΩ : 1000kΩ .
- All capacitors are in μF unless otherwise noted. pF: μμF.
  50V or less are not indicated except for electrolytics and tantalums.
- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.
- ⊟ : nonflammable resistor.
- ⊟ : fusible resistor.
- ▭ : panel designation.
- △ : internal component.
- ——— : B + Line.
- — — — : B − Line.
- ⇨ : IN/OUT direction of B line (+, −).
- Circled numbers refer to waveforms.
- Voltage are dc between ground and measurement points.
- Readings are taken with a color-bar signal input.
- Readings are taken with a digital multimeter (DC10 MΩ).
- Voltage are taken with a VOM (input impedance 10 MΩ).
- Voltage variations may be noted due to normal production tolerances.

Note : The components identified by mark ⚠ or dotted line with mark ⚠ are critical for safety.
Replace only with part number specified.

Note:	Note:
The components identified by matk ⚠ or dotted line with mark ⚠ are critical for safety. Replace only with part number specified.	Les composants identifiés par une marque ⚠ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifie.

When indicating parts by reference number, please include the board name.

SECTION 5
EXPLODED VIEWS

NOTE:

- -XX, -X mean standardized parts, so they may have some differences from the original one.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- The mechanical parts with no reference number in the exploded views are not supplied.
- Hardware (# mark) list is given in the last of this parts list.

The components identified by mark ⚠ or dotted line with mark ⚠ are critical for safety.
Replace only with part number specified.

Les composants identifiés par une marque ⚠ sont critiques pour la sécurité.
Ne les remplacer que par une pièce portant le numéro spéci-fie.

SECTION 6
ELECTRICAL PARTS LIST

NOTE:

The components identified by mark ⚠ or dotted line with mark ⚠ are critical for safety.
Replace only with part number specified.

Les composants identifiés par une marque ⚠ sont critiques pour la sécurité.
Ne les remplacer que par une pièce portant le numéro spéci-fie.

When indicating parts by reference number, please include the board name.

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- −XX, −X mean standardized parts, so they may have some difference from the original one.
- RESISTORS
  All resistors are in ohms.
  METAL : metal-film resistor
  METAL OXIDE : Metal Oxide-film resistor
  F : nonflammable
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- SEMICONDUCTORS
  In each case, u : μ, for example :
  uA... : μA... , uPA... , μPA... , uPB... , μPB... , uPC... , μPC... , uPD..., μPD...
- CAPACITORS :
  uF : μF
- COILS
  uH : μH

Note:
The components identified by mark ⚠ or dotted line with mark ⚠ are critical for safety.
Replace only with part number specified.

Note:
Les composants identifiés par une marque ⚠ sont critiques pour la sécurité.
Ne les remplacer que par une pièce portant le numéro spécifié.

MEMO

MEMO

SECTION 7
ELECTRICAL ADJUSTMENTS

During the adjustment, see the Parts Arrangement Diagram relevant to the adjustment on page 210.

7-1. PRE-ADJUSTMENT PREPARATIONS

Necessary items and indications for total adjustment of electric circuit of this machine will be described in this chapter.

7-1-1. Instruments to be Used

1) Color TV
2) Oscilloscope 1 or 2 phenomena, band more than 15 MHz, delay mode, as provided.
3) Frequency counter (min. 8 digits)
4) PAL pattern generator
5) SECAM pattern generator (SLV-815B only)
6) Digital voltmeter
7) Audio level meter
8) Audio generator
9) Attenuator
10) Distortion factor meter
11) Voice multiple signal generator
12) Alignment tape
    Part code: H7099052H (MH-2)
13) HiFi alignment tape

7-1-2. Connection

Unless otherwise specified, connect and adjust the measuring instruments as shown in the following diagram.

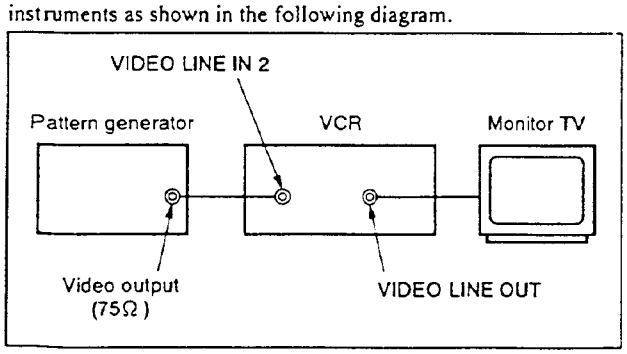

Fig. 7-1.

7-1-3. Setup for Adjustment

In this adjustment, PAL pattern generator is connected with LINE 2 input signal terminal.When check to tuner, connected AERIAL terminal. Check that the amplitudes of video signal SYNC signal, of picture portions, and of burst signals are flat at approximately 0.3, 0.7 and 0.3V, respectively, and that the level ratio of the burst signal and "red" signal are 0.30:0.66. Fig. 7-2. shows video signals (color bars) used in adjusting the video section.

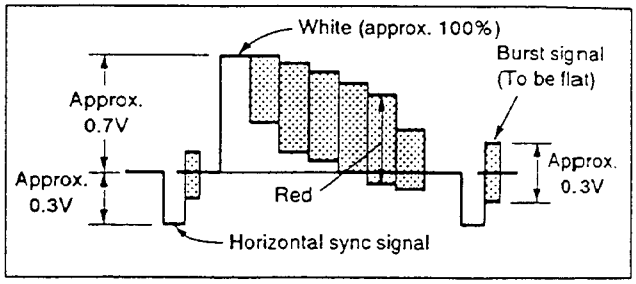

Fig. 7-2.

7-1-4. Alignment Tape (MH-2)

	Time	Video signal	Audio signal
1	10 min	Stair-step	6 kHz
2	5 min	———	3 kHz
3	10 min	Color bar	1 kHz
4	3 min	RF sweep	———

Table 7-1.

7-1-5. Specified I/O Level and Impedance

Input/output terminal

Video inputs	LINE IN: phono jacks
	EURO-AV: 21-pin (Pin ⑳) 1 Vp-p, 75Ω, unbalanced, sync negative
Audio inputs	LINE IN: phono jacks
	47 kΩ, −7.5 dBs (0 dBs=0.775 Vrms)
	EURO-AV: 21-pin (Pin ② and ⑥)
	More than 10 kΩ, −4 dBs
Video outputs	LINE OUT: phono jack
	EURO-AV: 21-pin (Pin ⑲) 1 Vp-p, 75Ω, unbalanced sync negative
Audio outputs	LINE OUT: phono jack
	−7.5 dBs at load
	impedance 47 kΩ
	Output impedance: less than 10 kΩ
	EURO-AV: 21-pin (Pins ① and ③)
	Output impedance: less than 1 kΩ
	−4 dBs with 10 kΩ load

7-1-6. Operating Method When the Front Panel Removed

When adjust with the front panel (SW BLOCK, JOG/SHUTTLE, TK-17 board and TK-18 board) removed, connect the resisters as shown below and operate with the remote commander.

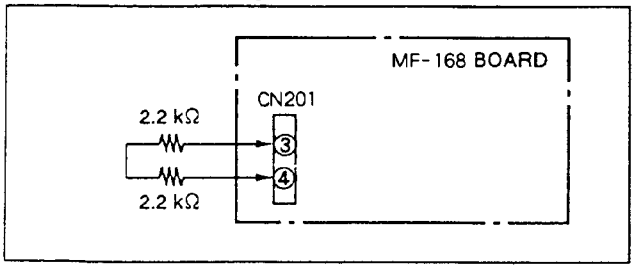

Fig. 7-3.

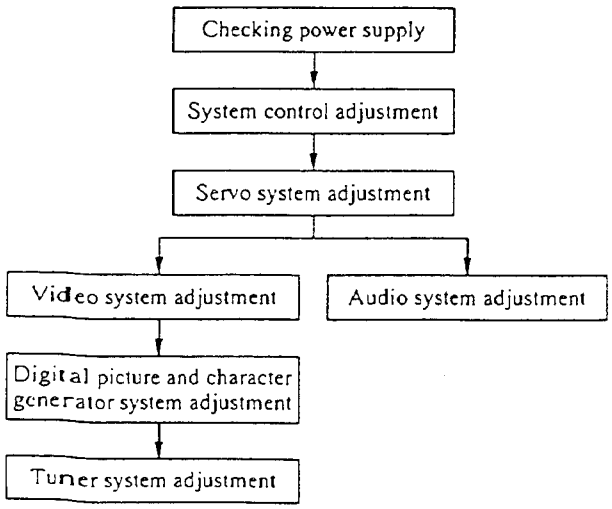
7-1-7. Adjusting Sequence

Make the electrical adjustment in the following sequence.



7-2. POWER SUPPLY CHECK (POWER BLOCK)

Mode	E-E
Measuring instrument	Digital voltmeter
UNSW 6V check	
Measurement point	Pin⑤of CN1
Specified value	6 ± 0.25Vdc
UNSW − 30V check	
Measurement point	Pin⑩of CN2
Specified value	− 30.0 ± 2.5Vdc
UNSW 6V check	
Measurement point	Pin⑪of CN2
Specified value	6.0 ± 0.6Vdc
SW 5V check	
Measurement point	Pin⑥of CN1
Specified value	$5.00 \pm^{0.15}_{0.10}$Vdc
SW 9V check	
Measurement point	Pin④of CN1
Specified value	9.0 ± 0.3Vdc
UNSW 12V check	
Measurement point	Pin③of CN1
Specified value	12.0 ± 0.1Vdc
MTR 12V check	
Measurement point	Pin①of CN2
Specified value	12.0 ± 0.3Vdc
UNSW 35V check	
Measurement point	Pin①of CN1
Specified value	35V ± 3.0Vdc

Checking method:

1) Confirm that each voltage meets its specified value.

POWER BLOCK (Conductor side)

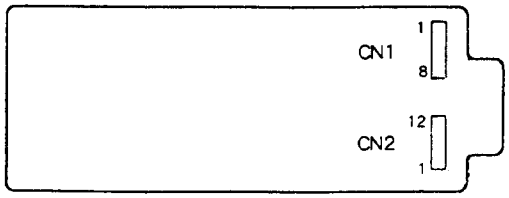


Fig. 7-4.

7-3. SYSTEM CONTROL ADJUSTMENT

7-3-1. Clock Adjustment (MF-167 BOARD)

Measurement point	Pin⑧of IC601
Measuring Instrument	Interval counter
Adjusting Element	CV601
Specified Value	0.1249995 ± 0.0000005 sec

Connection:

1) Make the circuit below and supply the generated voltage to IC601 pin④.

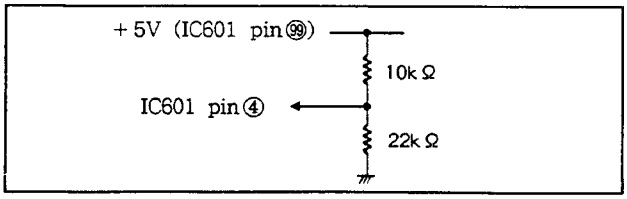

Fig. 7-5-1.

Adjusting method:

1) Pass a 9-state binary counter through Pin ⑧ of IC601 to divide the 4096 Hz frequency nine times and transform to 8 Hz. Measure the cycle.
2) Adjust CV601 so that an 8 Hz cycle equals 0.1249995 ± 0.0000005 sec.

Note: Do not adjust CV601 except when replacing microcomputers.

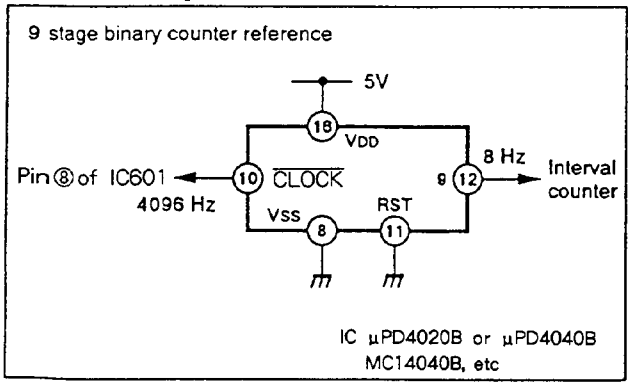

Fig. 7-5-2.

7-4. SERVO SYSTEM ADJUSTMENT

7-4-1. Switching Position Adjustment (MA-140 Board)

Mode	PB
Signal	Alignment tape: SP stair-step section
Measurement point	CH1 : VIDEO OUT (LINE OUT) CH2:Pin②of CN919(RF SWP)/MA-140
Measuring Instrument	Oscilloscope
Adjusting Element	RV401
Specified Value	6.5 ± 0.5H (416 ± 32 μsec)

Adjusting method:

1) Once set to STOP mode, then to PB mode.
2) Check that the switching position is 6.5 ± 0.5H. (416 ± 32 μsec)
   If not meet the specified value, turn RV401 and repeat steps 1) to 2).

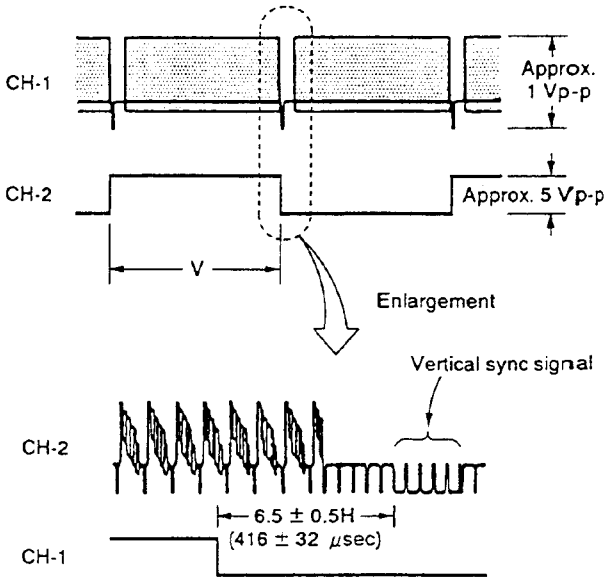

Fig. 7-6.

7-5. VIDEO SYSTEM ADJUSTMENT

Adjust the video system in the following sequence as a rule. The color video signal supplied from the pattern generator is used as a video input signal for video system adjustment in the recording mode.
Make sure that sync and color burst signals meet requirements specified at setup of adjustment shown in Fig. 7-2.

[Adjusting sequence]

7-5-1. Playback Y Signal Level Adjustment
7-5-2. Y Signal NR Level Adjustment
7-5-3. Sync AGC Adjustment
7-5-4. Sync Tip Carrier Set and Deviation Adjustment
7-5-5. White Clip, Dark Clip Adjustment
7-5-6. Recording Y Signal Level Adjustment
7-5-7. Recording Chroma Level Adjustment
7-5-8. PAL JOG AFC Adjustment
7-5-9. 0.5H CCD Level Adjustment
7-5-10. SECAM Discrimination Adjustment

7-5-1. Playback Y Signal Level Adjustment (YC-124 Board)

Mode	PB
Signal	Alignment tape: SP color bar section
Measurement Point	VIDEO LINE OUT terminal
Measuring Instrument	Oscilloscope
Adjusting Element	RV108
Specified Value	1.00 ± 0.05 Vp-p

Note: 1) Make this adjustment with the EDIT ON/OFF button set to off.
2) VIDEO LINE OUT terminal must be terminated at 75Ω ± 1%.

Adjusting method:
1) With RV108, adjust the VIDEO signal level to 1.00 ± 0.05 Vp-p.

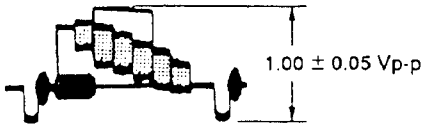

Fig. 7-7.

7-5-2. Y Signal NR Level Adjustment (YC-124 Board)

Mode	PB
Signal	Alignment tape: SP color bar section
Measurement Point	Pin ⑩ of IC101
Measuring Instrument	Oscilloscope
Adjusting Element	RV107
Specified Value	Less than 30mVp-p or minimum

Adjusting method:
1) Adjust to eliminate level differences for each H step with RV107.

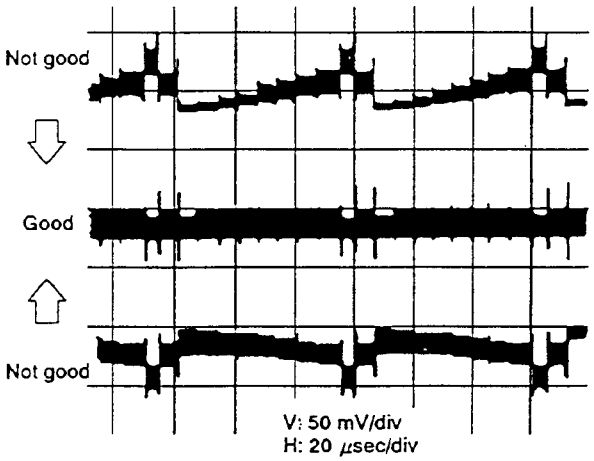

Fig. 7-8.

7-5-3. Sync AGC Adjustment (YC-124 Board)

Mode	E-E
Signal	Color bar
Measurement Point	VIDEO LINE OUT terminal
Measuring Instrument	Oscilloscope
Adjusting Element	RV101
Specified Value	1.00 ± 0.05 Vp-p

Note: VIDEO LINE OUT terminal must be terminates at 75Ω .

Adjusting method:
1) With RV101, adjust the VIDEO signal level to 1.00 ± 0.05 Vp-p.

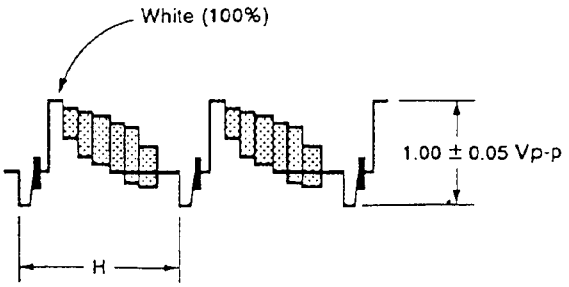

Fig. 7-9. SYNC AGC adjustment

7-5-4. Sync Tip Carrier Set and Deviation Adjustment (YC-124 Board)

Before starting the adjustment, be sure to check that recording Y signal level adjustment has been completed.

Sync tip carrier set	
Mode	E-E
Signal	No signal (Note 2)
Measurement Point	Pin㉔of IC101
Measuring Instrument	Frequency counter
Adjusting Element	RV103
Speified Value	3.80 ± 0.05MHz
Deviation adjustment	
Mode	REC and PB
Signal	Colour bars
Measurement Point	VIDEO LINE OUT terminal
Measuring Instrument	Osilloscope
Adjusting Element	RV102
Speified Value	1.00 ± 0.05Vp-p

Note 1) VIDEO LINE OUT terminal must be terminated at 75Ω .
2) To make no signal input, insert a shorting plug into VIDEO LINE IN 2 terminal.

Adjusting method:

1) Make a no signal state and select the E-E made.
2) Connect the frequency counter to the Pin ㉔ of IC101 and adjust to 3.80 ± 0.05MHz with RV103.
3) Input the color bar signal to make recording.
4) Playback the recorded tape portion and check that the playback Y signal level is 1.00 ± 0.05 Vp-p.

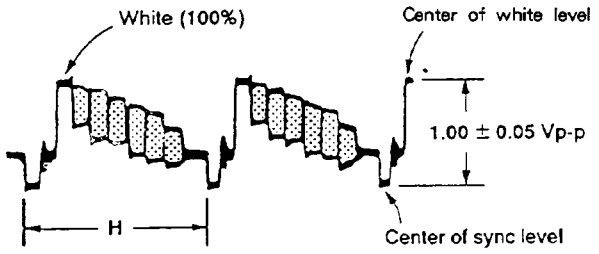

Fig. 7-10. Deviation adjustment

5) When the specified value is not met, input the color bar signal to select the E-E mode. Adjust RV102 to correct a playback Y signal level error, and then, repeat the steps 1) through 4) above.

7-5-5. White Clip, Dark Clip Adjustments (YC-124 Board)

Mode	E-E
Signal	Color bar
Measurement Point	Pin ⑳ of IC101
Measuring Instument	Oscilloscope
Adjusting Element	White clip : RV105 Dark clip : RV104
Specified Value	White clip : 180 ± 10 % Dark clip : 40 ± 10 %

Adjusting method:

1) With RV105, adjust the white clip level to 180 ± 10 % of the white level (100 %)
2) With RV104, adjust the dark clip level to 40 ± 10 % of the white level (100 %)

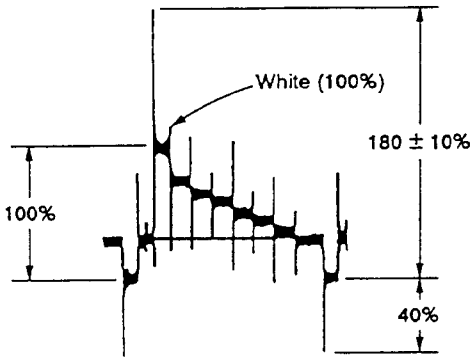

Fig. 7-11.

7-5-6. Recording Y Signal Level Adjustment (YC-124 Board)

Mode	REC
Signal	No signal
Measurement Point	Pin③of CN301 (YC-124)
Measuring Instument	Oscilloscope
Adjusting Element	RV110 (YC-124 board)
Specified Value	300 ± 10 mV

Adjusting method:

1) With RV110, adjust the Y REC RF signal level to 300 ± 10mV

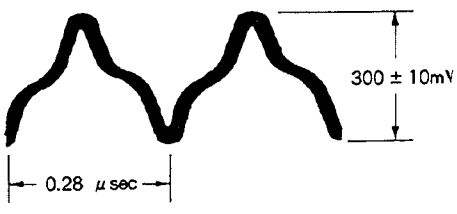

Fig. 7-12.

7-5-7. Recording Chroma Level Adjustment (YC-124 Board)

Mode	E-E
Signal	Color ber
Measurement Point	Pin⑧of CN301
Measuring Instument	Oscilloscope
Adjusting Element	RV301
Specified Value	120 ± 10 mVp-p

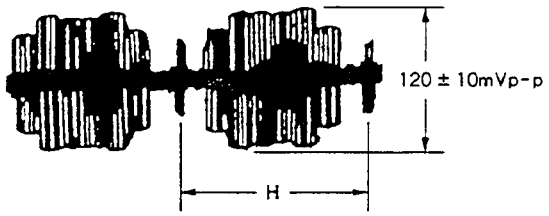

Fig. 7-13.

7-5-8. PAL JOG AFC Adjustment (YC-124 Board)

Mode	E-E
Signal	Color bar
Measurement Point	Pin⑲of IC360
Measuring Instument	Digital voltmeter
Adjusting Element	RV360
Specified Value	2.65 ± 0.05 Vdc

Adjusting method :

1) Adjust RV360 so that the voltage at Pin ⑲ of IC360 become 2.65 ± 0.05Vde.
   At this time confirm that the cycle of delta wave at Pin ㉑of IC360 is 32 μsec.

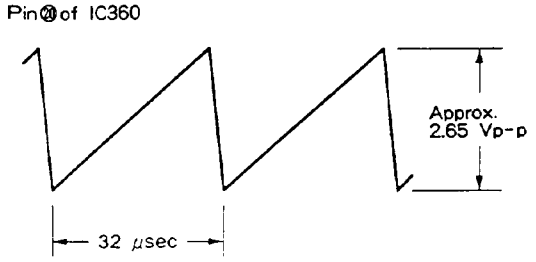

Fig. 7-14.

7-5-9. 0.5H CCD Level Adjustment (YC-124 Board)

Mode	E-E
Signal	Color bar
Measurement Point	Pin①of IC362
Measuring Instument	Oscilloscope
Adjusting Element	RV361
Specified Value	Same signal level with Pin ⑥ of IC362.

Adjusting method :

1) Measure the signal level at Pin⑥of IC362. (Approx. 2 Vp-p)
2) Adjust RV361 so that the signal levels at Pins①and⑥ of IC362 become same.

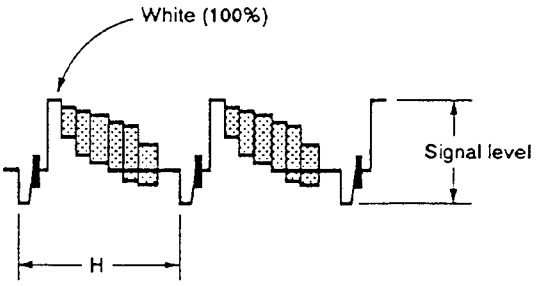

Fig. 7-15.

7-5-10. SECAM Discrimination Adjustment (YC-124 Board) (SLV-825B Only)

Mode	E-E
Signal	SECAM Color bar
Measurement Point	Pin⑨of IC450
Measuring Instument	Oscilloscope
Adjusting Element	RV450
Specified Value	4.5 ± 0.1 Vp-p

Adjusting method :

1) Adjust RV450 so that the amplitude of 1/2 fH waveform becomes 4.5 ± 0.1 Vp-p.

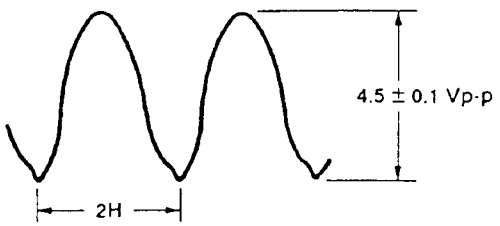

Fig. 7-16.

7-5-11. SECAM Sync. Gate Timing Adjustment (YC-124 Board)

Mode	E-E
Signal	SECAM Colour bars
Measurement Point	CH1 : VIDEO OUTPUT CH2 : CN301 Pin⑧ (YC-124 board)
Measuring Instrument	Osilloscope
Adjusting Element	RV402
Speified Value	T2 = 0 ± 0.3 μsec

Adjusting method :

1) Adjust with RV402 so that the color bar signal on VIDEO OUTPUT terminal becomes to the specified value.

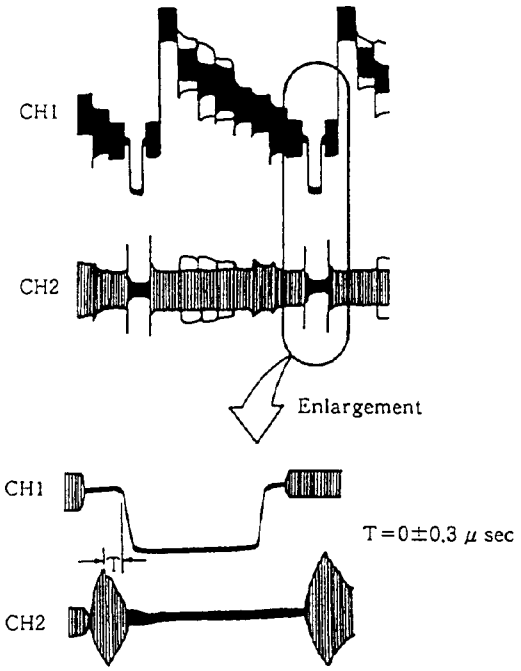

Fig. 7-17.

7-5-12. SECAM Bell Filter Adjustment (YC-124 Board)

Mode	PB
Signal	SECAM Colour bars
Measurement Point	IC401㉕
Measuring Instrument	Osilloscope
Adjusting Element	FL402
Speified Value	Same level of colour bars

Adjusting method :

1) Adjust FL402 so that levels of colour bars become the same.

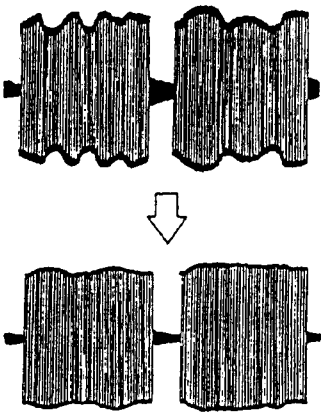

Fig. 7-18.

7-5-13. SECAM Recording Chroma Level Adjustment (YC-124 Board)

Mode	E-E
Signal	SECAM Colour bars
Measurement Point	CN301 ⑧
Measuring Instrument	Osilloscope
Adjusting Element	RV401
Speified Value	100 ± 10mVp-p

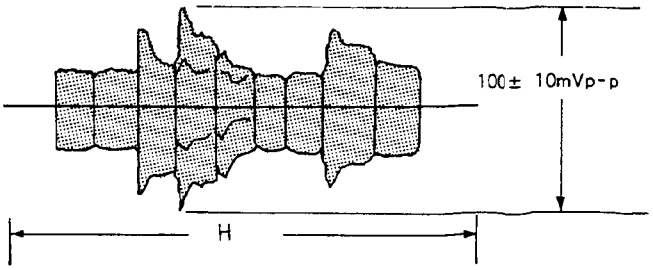

Fig. 7-19.

7-6. DIGITAL PICTURE AND CHARACTER GENERATOR SYSTEM ADJUSTMENTS

• Connect the monitor TV to EURO-AV connector (Pin ⑲ of CNJ902 on MA-140 board), then perform the adjustment.

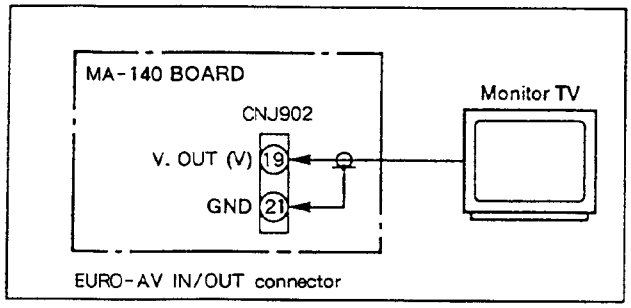

Fig. 7-20.

7-6-1. Read Clock Adjustment (DG-11 Board)

Mode	E-E (EDIT MONITOR)
Signal	Color bar
Measurement Point	EURO AV IN/OUT connector
Measuring Instrument	Monitor TV
Adjusting Element	T102
Specified Value	A=B

Adjusting method:

1) Adjust T102 so that the child pictures are positioned symmetrically.
   Note: Adjust the character position following the steps in "Character Position Adjustment".

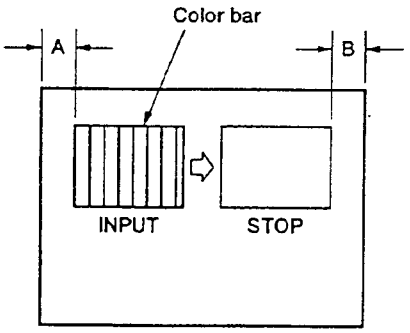

Fig. 7-21.

7-6-2. Write Clock Adjustment (DG-11 Board)

Mode	E-E
Signal	Color bar
Measurement Point	EURO AV IN/OUT connector
Measuring Instrument	Monitor TV
Adjusting Element	T101
Specified Value	A=B

Adjusting method:

1) Adjust T101 so that the image center of the child picture in INPUT side matches with the child picture frame center.

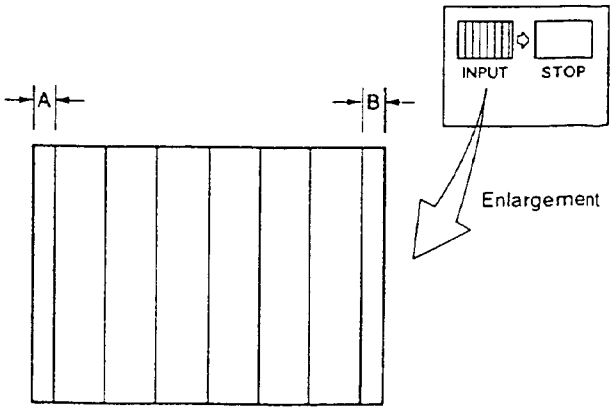

Fig. 7-22.

7-6-3. TINT Adjustment (DG-11 Board)

Mode	E-E (EDIT MONITOR)
Signal	Color bar
Measurement Point	Pin ⑰ of IC102
Measuring Instrument	Oscilloscope
Adjusting Element	RV104
Specified Value	A=B

Adjusting method:

1) Adjust RV104 so that the level A and level B become same.

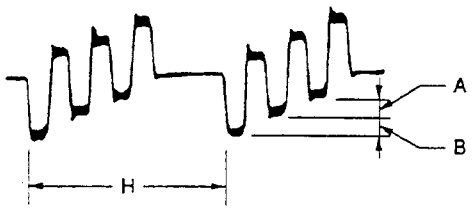

Fig. 7-23.

7-6-4. Clamp Level Adjustment (DG-11 Board)

Mode	PB (P in P)
Signal	Color bar
Measurement Point	Pin ⑥ of CN101
Measuring Instrument	Oscilloscope
Adjusting Element	RV101
Specified Value	A=0V

Adjusting method:

1) Adjust RV101 so that the pedestal levels of parent picture match with the levels of child picture.

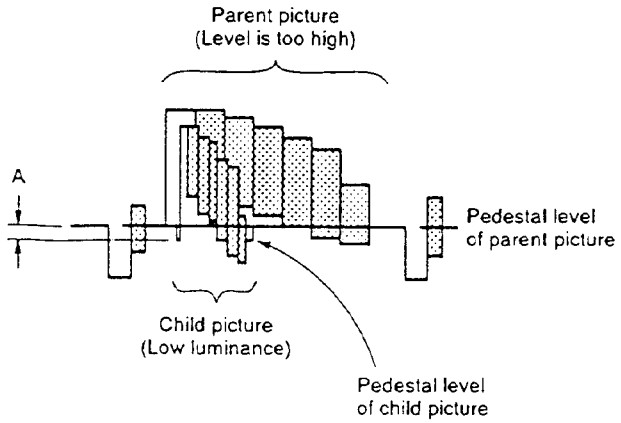

Fig. 7-24.

7-6-5. Hue and Color Level Adjustment (DG-11 Board)

Mode	E-E (P in P)
Signal	Color ber
Measurement Point	EURO AV IN/OUT connector
Measuring Instument	Vectorscope
Adjusting Element	Hue : RV103 Color Level : RV102
Specified Value	The chroma luminance points in parent and child pictures should be overlapped.

Adjusting method:

1) Turn RV102 and RV103 alternately and match the chroma luminance point (higher luminance) of parent picture with the chroma luminance point (lower luminance) of child picture.

7-6-6. Character Generator Clock Check (CG-15 Board)

Mode	E-E
Signal	No signal
Measurement Point	Pin ㉘ of IC602
Measuring Instument	Frequency counter
Specified Value	17.734476MHz ± 100Hz

Note: Attach 10 kΩ register to tip of the probe.

Checking method:

1) Confirm that the clock oscillation frequency is 17.734476 MHz ± 100 Hz.

7-6-7. AFC Adjustment (CG-15 Board)

Mode	E-E
Signal	No signal
Measurement Point	Pin ⑧ of IC603
Measuring Instument	Oscilloscope
Adjusting Element	RV601
Specified Value	15625 ± 50Hz

Connection :

1) Connect Pins ① and ⑨ of IC603 with 1k Ω resistance.

Adjusting method :

1) Adjust RV601 so that the oscillation frequency is 15625 ± 50Hz.

7-6-8. Character Position Adjustment (CG-15 Board)

Mode	E-E (EDIT MONITOR)
Signal	Color bar
Measurement Point	EURO AV IN/OUT connector
Measuring Instrument	Monitor TV
Adjusting Element	CV601
Specified Value	A=B

Note: Perform this adjustment after "Write Clock Adjustment".

Adjusting method :

1) Adjust CV601 so that the arrow mark is positioned at the center between the child pictures.

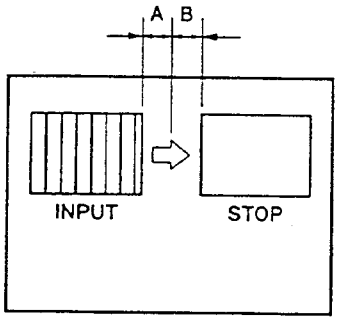

Fig. 7-25.

7-7. AUDIO SYSTEM ADJUSTMENTS

- Adjust the audio system in the LP mode, unless otherwise specified.
  Use the alignment tape.
- Adjust both Lch and Rch.
- Audio system adjustments consist of section 7-7-1. Hi-Fi Audio adjustment and 7-7-2. Normal Audio Adjustment.

[Connection]

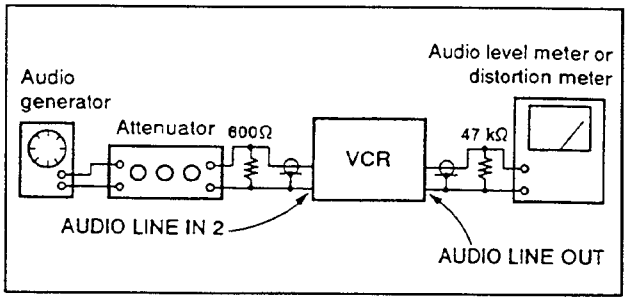

Fig. 7-26.

7-7-1. Hi-Fi Audio System Adjustment

- Set Switches and knobs to the following positions to make adjustment unless otherwise specified.
  INPUT SELECT switch···· LINE 2
  REC LEVEL knob····· Set to −21 dBs.

- When the tuner block is obstructive for adjustment, remove it.

[Adjusting sequence]

1. NTSC VCO fo adjustment
2. PAL VCO fo adjustment
3. NTSC BPF fo adjustment
4. PAL BPF fo adjustment
5. AF Switching Position adjustment
6. Hi-Fi/Normal Detect adjustment
7. Playback Level adjustment
8. Record VR (Left channel) Control adjustment
9. Record VR (Right channel) Control adjustment

1. NTSC VCO f_0 adjustment (HF-26 board)

Mode	Recording, NTSC mode
Signal	No signal (HF-26 CN202 Pin ②: L)
Measuring instrument	Frequency counter
LEFT channel (1.3 MHz) Adjustment	
Measurement point	IC201 Pin ⑰/HF-26
Adjusting element	RV202
Specified value	1.300 MHz ± 1 KHZ
RIGHT channel (1.7 MHz) Adjustment	
Measurement point	IC201 Pin ⑯/HF-26
Adjusting element	RV205
Specified value	1.700 MHz ± 1 kHz

Note : Connect the frequency counter through a probe of high input impedance (more than 10 MΩ) and low capacity (10 pF or less).

Checking method :

1) Connect the frequency counter to each measurement point.
2) Confirm that each frequency meet its specified value.

2. PAL VCO f_0 adjustment (HF-26 board)

Mode	Recording, PAL mode
Signal	No signal (HF-26 CN202 Pin ②: H)
Measuring instrument	Frequency counter
LEFT channel (1.4 MHz) Adjustment	
Measurement point	IC201, Pin ⑰/HF-26
Adjusting element	RV207
Specified value	1.400 MHz ± 1 kHz
RIGHT channel (1.8 MHz) Adjustment	
Measurement point	IC201, Pin ⑯
Adjusting element	RV209
Specified value	1.800 MHz ± 1 kHz

Note : Connect the frequency counter through a probe of high input impedance (more than 10 MΩ) and low capacity (10 pF or less).

Checking method :

1) Connect the frequency counter to each measurement point.
2) Confirm that each frequency meet its specified value.

3. NTSC BPF f_0 adjustment (HF-26 board)

Mode	NTSC, PB mode
Signal	1.720 MHz sine wave
Measuring instrument	Oscilloscope
Measurement point	HF-26, IC201, Pin ⑱
Adjusting element	RV204
Specified value	Minimum amplitude as shown

Adjusting method :

1) Set the NTSC PB switch to ON.
2) Input the sine wave signal of 1.720 MHz, 70 mV to CN202 Pin ⑨ from signal generator. (no modulated signal)
3) Adjust RV204 for the minimum amplitude.

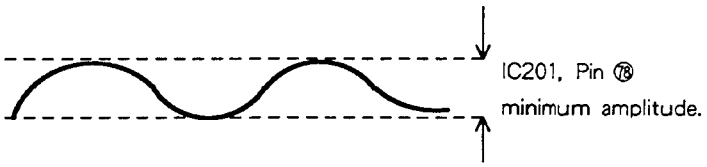

Fig. 7-27.

4. PAL BPF f_0 adjustment (HF-26 board)

Mode	PAL, PB mode
Signal	1.840 MHz sine wave
Measuring instrument	Oscilloscope
Measurement point	HF-26, IC201, Pin ⑱
Adjusting element	RV208
Specified value	Minimum amplitude as shown

Adjusting method :

1) Input the sine wave signal of 1.840 MHz, 70 mV CN202 Pin ⑨ from signal generator. (no modulated signal)
2) Adjust RV208 for the minimum amplitude.

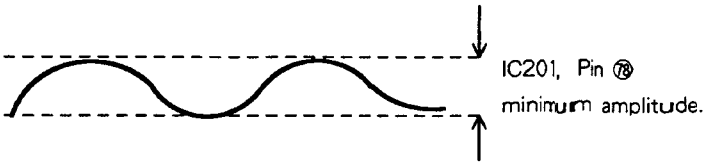

Fig. 7-28.

5. AF Switching Position adjustment (MA-140 board)

Mode	PB
Signal	Alignment tape (MH-2)
Measuring instrument	Oscilloscope
Measurement point	MA-140, CN901, Pin ⑥
Adjusting element	RV400
Specified value	Minimum amplitude

Adjusting method :

1) Playback the alignment tape (MH-2).
2) Press MANUAL of TRACKING button. Press both [+] and [−] keys of TRACKING simultaneously to obtain the center position of TRACKING.
3) Trigger oscilloscope by RP-147, CN803 Pin ⑤ (RF SW'G pulse).
4) Adjust RV400 to minimize A.

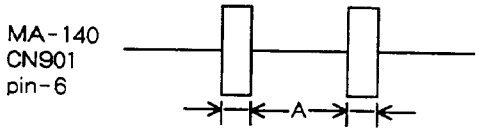

Fig. 7-29.

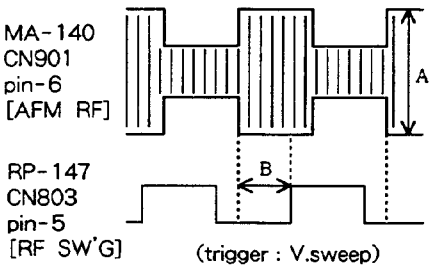
6. Hi-Fi/Normal Detect adjustment (MA-140 board)

Mode	PB
Signal	Alignment tape (HiFi 400 Hz)
Measuring instrument	Oscilloscope
Measurement point	MA-140, CN901, Pin ⑥
Adjusting element	RV201
Specified value	300 mV ± 10 mVp-p

Adjusting method :

1) Press MANUAL of TRACKING button. Obtain the maximum AFM RF level by adjusting TRACKING control.
2) Connect oscilloscope to MA-140, CN901 Pin ⑥, and is triggered by RP-147, CN803 Pin⑤ (RF SW'G pulse).
3) Adjust RV201/MA-140 for 300 mV ± 10 mVp-p, in the side B.



A = 300mV ± 10mV (p-p)

Fig. 7-30.

7. Playback Level adjustment (HF-26 board)

Mode	PB
Signal	Alignment tape (HiFi 400 Hz)
Measurement point	Lch : AUDIO LINE OUT L Rch : AUDIO LINE OUT R
Measuring instrument	Audio level meter
Adjusting element	Lch : RV201 Rch : RV206
Specified value	− 7.5 ± 0.1 dBs

Adjusting method :

1) Adjust a playback level to -7.5 ± 0.1 dBs for both L and R channels with RV201 and RV206 respectively.

8. Record VR (Left channel) Control adjustment (MF-167 board)

Mode	Recording
Signal	No signal
Measuring instrument	Digital voltmeter
Measurement point	MF-167, CN601, Pin ⑯
Adjusting element	RV603
Specified value	(voltage at CN601, Pin ⑫) × ½ ± 0.05 V

Adjusting method :

1) Set the RECORD VR (RV601) into the mechanical center [click] position.
2) Adjust RV603 to obtain that Pin ⑯= [voltage at CN601 Pin ⑫= LEVEL VR Vcc] × ½ ± 0.05 V

9. Record VR (Right channel) Control adjustment (MF-167 board)

Mode	Recording
Signal	No signal
Measuring instrument	Digital voltmeter
Measurement point	MF-167, CN601, Pin ⑮
Adjusting element	RV604
Specified value	(voltage at CN601, Pin ⑫) × ½ ± 0.05 V

Adjusting method :

1) Set the RECORD VR (RV602) into the mechanical center [click] position.
2) Adjust RV604 so that Pin ⑮= [voltage at CN601 Pin ⑫ = LEVEL VR Vcc] × ½ ± 0.05 V

7-7-2. Normal Audio System Adjustment

- Make adjustment in the SP mode, unless otherwise specified. Use a normal VHS cassette for an adjustment tape.
- Make adjustment with the switches set to the following positions.
  INPUT SELECT·····LINE 2
- Set the AUDIO MONITOR mode to NORMAL on the menu screen.

[Adjusting sequence]

1. ACE head adjustment···See Mechanism Block Adjustment
2. Recording bias adjustment

1. ACE head adjustment

See "Mechanism Block Adjustment".

2. Recording bias adjustment (MA-140 board)

Mode	REC and PB
Signal	333 Hz, −27.5 dBz / 7 kHz, −27.5 dBs } at AUDIO INPUT, LINE 2
Measuring point	AUDIO LINE OUT L or R
Measuring instrument	Audio level meter
Adjusting element	RV701
Specified value	0 ± 1 dB (1 ± 1dB for B model)

Adjusting method :

1) Supply a signal of 333 Hz, −27.5 dBs to Audio.
2) Connect the audio level meter to the Audio Line Output.
3) Adjust the attenuator so that the audio input level is −27.5 dBs.
4) Make recording in the SP mode.
5) Set an audio line input signal to 7 kHz and make recording.
6) Playback a recorded position, and measure output levels at 333 Hz and 7 kHz.
7) Confirm that the 7 kHz playback output levels within a range of the 333 Hz playback output level 0 ± 1 dB. When beyond this range, adjust RV701 and repeat the steps 1) through 7) above. (1 ± 1dB for B model)

7-8. TUNER SYSTEM ADJUSTMENTS

7-8-1. RF AGC Adjustment (IF501)

Signal	Broadcast TV signal
Adjusting element	VR of IF unit (Fig. 7-31.)

Adjusting method :

1) Adjust the monitor TV to a maximum contrast.
2) Turn the VR to make snow noise visible.
3) Turn the VR in an opposite direction and set it to the point where the snow noise disappears.
4) Receive each channel and confirm that there are no beat picture corruption snow noise due to cross modulation.

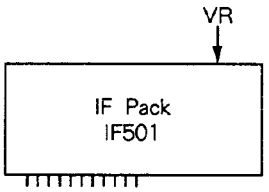


Fig. 7-31.

7-8-2. Receive Separation Adjustment (MA-140 board) (except UB model)

Signal	Stereo: Lch : 400 Hz, 100% modulation / Rch : No modulation
Connect point	AUDIO LINE OUT R
Measuring instrument	Oscilloscope
Adjusting element	RV501

Adjusting method :

1) Set the sound multiplex signal generator in the Stereo mode, and set only Lch to 400 Hz, 100% modulation.
2) Connect the oscilloscope to the Rch of Audio Line Output.
3) Adjust RV501 to minimize Rch output.
   When this is done, do not fully turn RV501. (The "STEREO" indication must be illuminated).

7-9. TRANSCODER (TC-27 Board) ADJUSTMENT

[SECAM Digital Picture Mode Chroma Adjustment]
(SL-825B model only)

- Connect the monitor TV to EURO-AV connector (pin⑲ of CNJ902 on MA-140 board), then perform the adjustment.

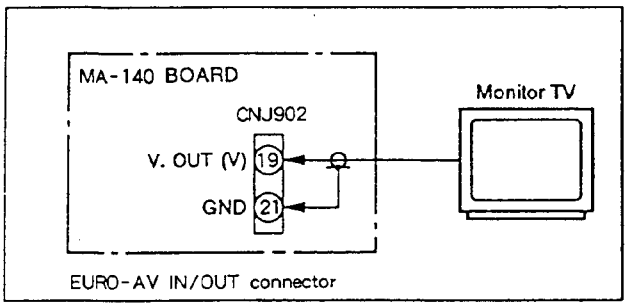

Fig. 7-32.

[Adjusting sequence]

7-9-1. VCO-1 adjustment
7-9-2. VCO-2 adjustment
7-9-3. I-REF-1 adjustment
7-9-4. I-REF-2 adjustment
7-9-5. BELL-1 Filter adjustment
7-9-6. BELL-2 Filter adjustment
7-9-7. B-Y f_o adjustment
7-9-8. R-Y f_o adjustment
7-9-9. Colour Output Level adjustment

7-9-1. VCO-1 Adjustment (TC-27 Board)

Mode	E-E
Signal	no input signal
Measuring instrument	frequency counter
Measurement point	IC102, Pin ⑨
Adjusting element	RV101
Specified value	15,625 Hz ± 10 Hz

Adjusting method :

1) Connect frequency counter to IC102, Pin ⑨.
2) Adjust RV101 for 15,625 Hz ± 10Hz

7-9-2. VCO-2 Adjustment (TC-27 Board)

Mode	E-E
Signal	no input signal
Measuring instrument	frequency counter
Measurement point	IC104, Pin ⑨
Adjusting element	RV104
Specified value	15,625 Hz ± 10 Hz

Adjusting method :

1) Connect freqyency counter to IC104, Pin ⑨.
2) Adjust RV104 for 15,625 Hz ± 10Hz

7-9-3. I-REF-1 Adjustment (TC-27 Board)

Mode	E-E
Signal	Colour bars (SECAM)
Measuring instrument	Oscilloscope
Measurement point	CH-1 : IC102, Pin ④ CH-2 : IC102, Pin ⑨
Adjusting element	RV103
Specified value	T = 4.2 ± 0.1 μsec

Adjusting method :

1) Adjust RV103 so that T is 4.2 ± 0.1 μsec.

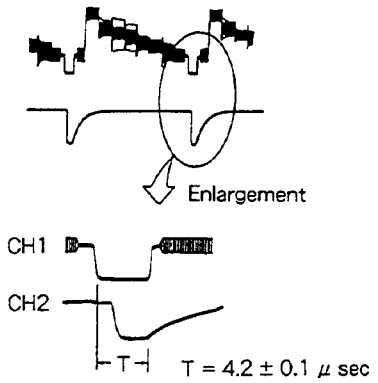

Fig. 7-33.

7-9-4. I-REF-2 Adjustment (TC-27 Board)

Mode	E-E
Signal	Colour bars (SECAM)
Measuring instrument	Oscilloscope
Measurement point	CH-1 : IC104, Pin ④ CH-2 : IC104, Pin ⑨
Adjusting element	RV106
Specified value	T = 4.2 ± 0.1 μsec

Adjusting method :

1) Adjust RV106 so that T is 4.2 ± 0.1 μsec.

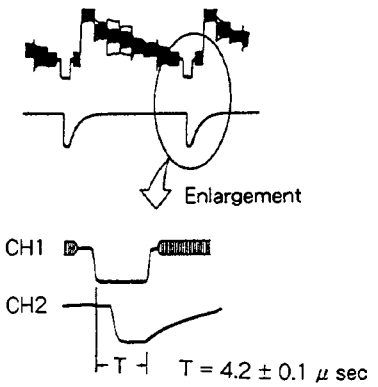

Fig. 7-34.

7-9-5. BELL-1 Filter Adjustment (TC-27 Board)

Mode	E-E
Signal	Colour bars (SECAM)
Measuring instrument	Oscilloscope
Measurement point	IC102, Pin ㉛
Adjusting element	LV102
Specified value	Same colour bars level

Adjusting method :

1) Adjust LV102 so that levels of colour bars have the same level.

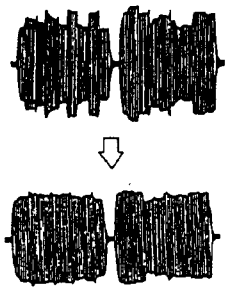

Fig. 7-35.

7-9-6. BELL-2 Filter Adjustment (TC-27 Board)

Mode	E-E
Signal	Colour bars (SECAM)
Measuring instrument	Oscilloscope
Measurement point	IC104, Pin ㉛
Adjusting element	LV105
Specified value	Same colour bars level

Adjusting method :

1) Adjust LV105 so that levels of colour bars have the same level.

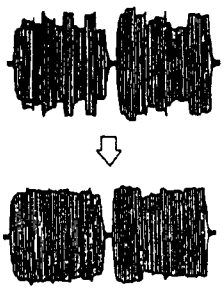

Fig. 7-36.

7-9-7. B-Y fo Adjustment (TC-27 Board)

Mode	E-E
Signal	Colour bars (SECAM)
Measuring instrument	Oscilloscope
Measurement point/ Adjusting element	B-Y 1 : IC103 Pin ③ LV103
	B-Y 2 : IC105 Pin ③ LV106
Specified value	within 0.05 Vp-p

Adjusting method :

1) Connect Pin ⑲ and Pin ㉑ of IC102 and IC104, each.

2) Adjust LV103 and LV106 for the level within 0.05Vp-p.

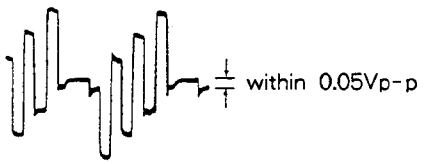

Fig. 7-37.

7-9-8. R-Y fo Adjustment (TC-27 Board)

Mode	E-E
Signal	Colour bars (SECAM)
Measuring instrument	Oscilloscope
Measurement point/ Adjusting element	R-Y 1 : IC103 Pin ② LV101
	R-Y 2 : IC105 Pin ② LV104
Specified value	within 0.05 Vp-p

Adjusting method :

1) Connect Pin ⑲ and Pin ㉑ of IC102 and IC104, each.

2) Adjust LV101 and LV104 for the level within 0.05Vp-p.

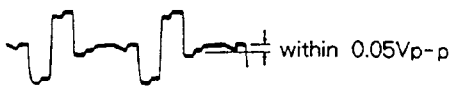

Fig. 7-38.

7-9-9. Colour Output Level Adjustment (TC-27 Board)

Mode	E-E
Signal	Colour bars (SECAM)
Measuring instrument	Oscilloscope
Measurement point/ Adjusting element	COLOR LEVEL 1 : IC103 Pin ③/RV102
	COLOR LEVEL 2 : IC105 Pin ③/RV105
Specified value	within 0.75 ± 0.05 Vp-p

Adjusting method :

1) Connect Pin ⑲ and Pin ㉑ of IC102 and IC104, each.

2) Adjust RV102 and RV105 for 0.75 ± 0.05Vp-p.

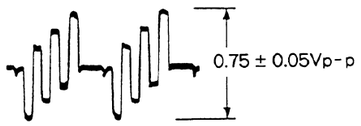

Fig. 7-39.

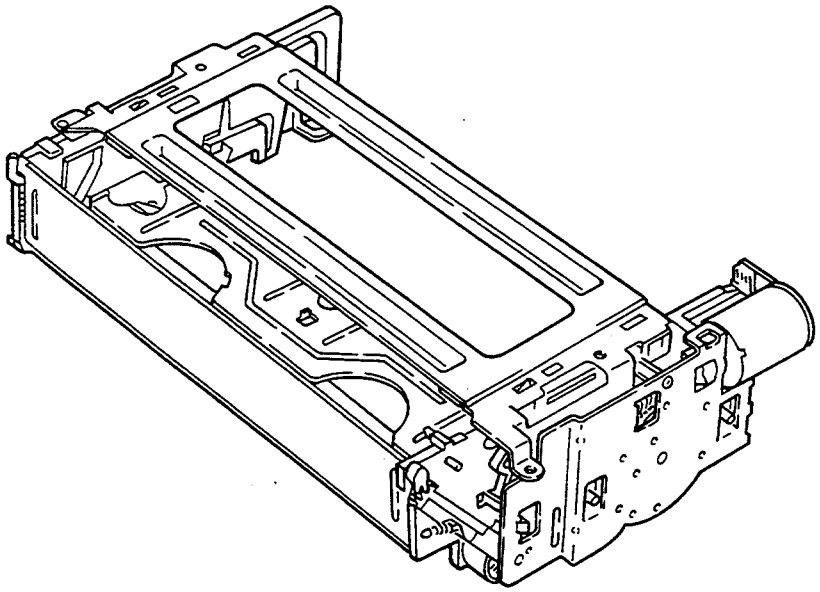
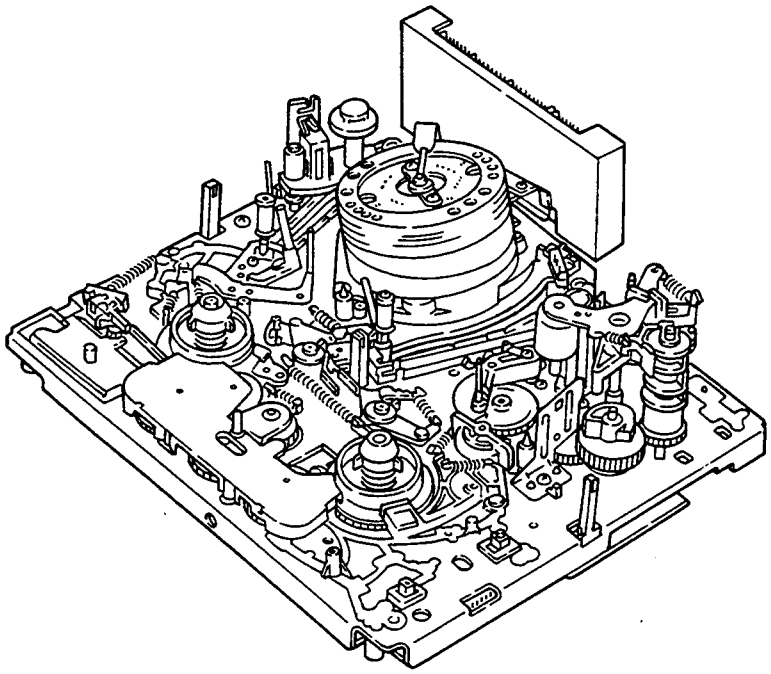
VHS MECHANICAL ADJUSTMENT MANUAL II

- Please use in conjunction with the SERVICE MANUAL.
- This VHS MECHANICAL ADJUSTMENT MANUAL II can be used for NTSC system and PAL system.





MICROFILM

VHS VIDEO RECORDER

SONY®

TABLE OF CONTENTS

1. PREPARATIONS FOR CHECKS, ADJUSTMENTS AND REPLACEMENT OF THE DECK MECHANISM

Note : Refer to "Replacement Method" in the Service Guide for instructions on replacing the cabinet and PC boards. DO not perform cassette loading or threading with the VCR positioned upside-down.

1-1. LOADING AND UNLOADING VIDEO CASSETTES WITH THE POWER OFF. (Fig. 1-1.)

1-1-1. Manual loading and unloading

1) Rotate the loading motor in the direction of arrow Ⓐ until loading is compleated.
(When unloading, rotate the loading motor in the direction of arrowⒷ.)

1-1-2. Loading and unloading using a separate power source.

1) Cassette loading is performed by applying approx. 10V (300 mA) to the power terminal of the loading motor using a stabilized DC power source.
(When unloading, apply the same voltage to the opposite polarity of the power terminal.)

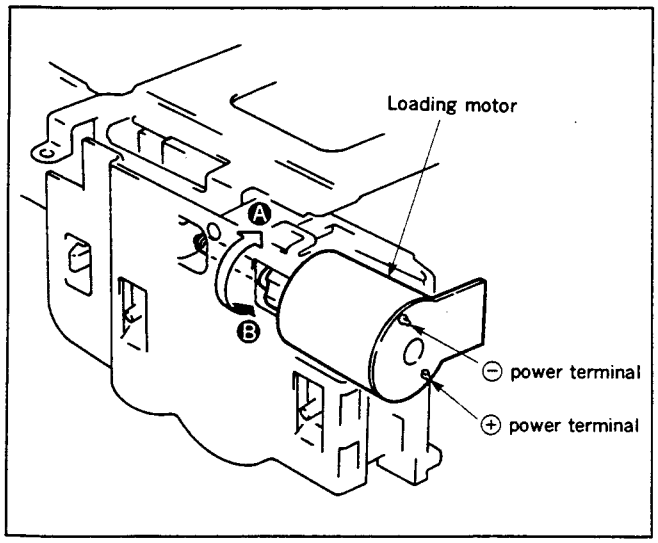


Fig. 1-1.

1-2. THREADING AND UNTHREADING WITH THE POWER OFF. (Fig. 1-2)

1-2-1. Manual threading and unthreading

1) Rotate the cam motor ❶ in the direction of arrow Ⓐ until threading is completed.
(When unthreading, rotate the cam motor ❶ in the direction of arrowⒷ.)

1-2-2. Threading and unthreading using a separate power source.

1) Threading is performed by applying approx. 10V (500 mA) to the power terminal for the cam motor ❶ using a DC stabilized power source.
(When unthreading, apply the same voltage to the opposite polarity of the power terminal.)

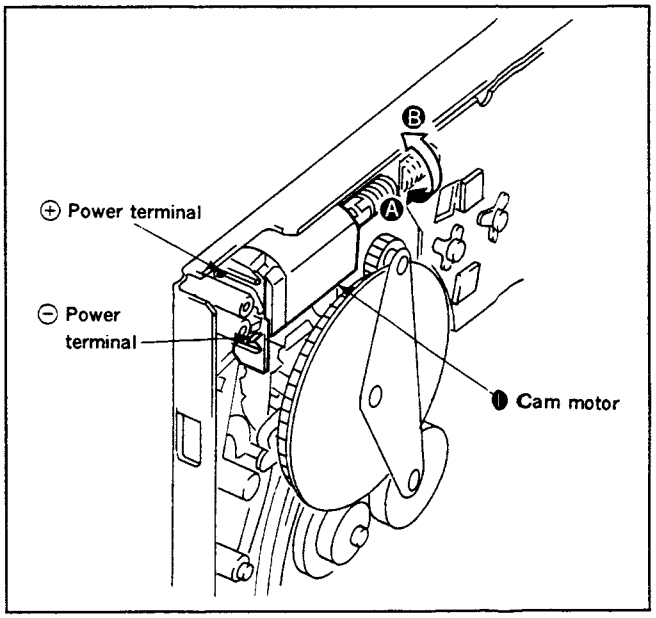

Fig. 1-2.

1-3. TO COMPLETE THREADING WITH THE FL CASSETTE CONTROLLER REMOVED. (Fig. 1-3)

1) Unplug the AC power cord from the power outlet.
2) Shield the supply, take-up sensors and the LED with black-masking tape.
3) Hold the cassatte down switch depressed by taping it, etc.
4) Plug the AC power cord into a power outlet.
   (At this time, the power should turn on and the tape rewinds for approx. 10 seconds, and the power turns off.)
5) Turn the power switch ON so that the mechanism is ready for loading.

Note : In this condition, the VTR is ready to operate in the different operating modes, including the record mode. At this time, rewind the tape for at least 15 seconds, then perform fast forward (FF).

Note : Following the above, be sure to reset the mechanism to the previous state as outlined below.

1) Remove the black-masking tape shielding the supply and take-up sensors, the LED and the tape holding cassette down switch.
2) Unplug the AC power cord from the power outlet to reset the system control microprocessor.

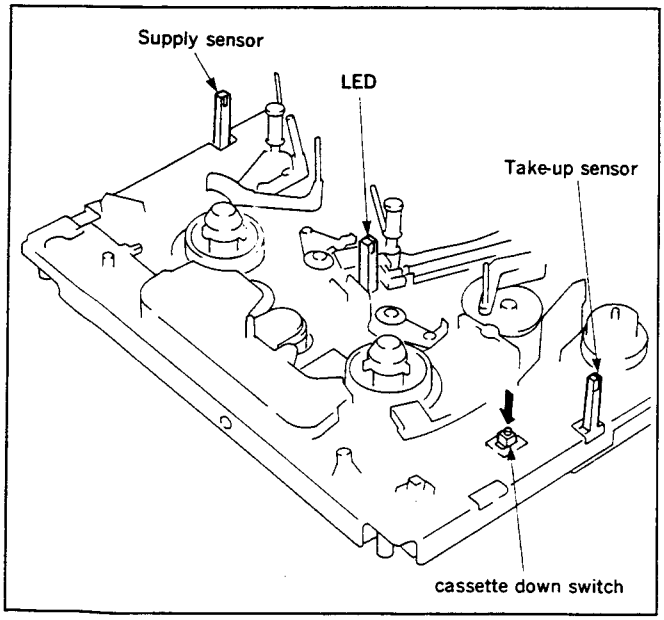

Fig. 1-3.

2. PERIODICAL INSPECTION AND REPLACEMENT

We recommend performing the following periodical inspections and maintenance in order to ensure that the unit operates in top condition and offers full performance, as well as realizes a long life of the mechanism and tapes.

* Be sure to perform the following maintenance procedures after the unit is repaired (regardless how long the unit has been used.)

2-1. CLEANING THE ROTARY HEAD DISC ASS'Y

1) Press Attach a deer skin cloth (Jig. Ref. No. J-7) soaked in cleaning solution (Jig. Ref. No. J-5) lightly to the rotary drum ass'y, then turn the rotary head disc slowly by hand to clean the surface of the rotary drum ass'y. (At this time, do not turn on the power motor to rotate the rotary head disc for cleaning.)
2) Also, do not wipe the drum ass'y by moving the deer skin cloth vertically across the head as this could damage of the tip of the head.

2-2. CLEANING THE TAPE TRANSPORT SYSTEM

1) Clean the tape transport surfaces (tape guide, a drum ass'y surfaces, capstan, pinch roller, etc.) with a deer skin cloth soaked in an approved in the recommended cleaning solution.

2-3. CLEANING THE DRIVE SYSTEM

1) Wipe the drive mechanism with an ordinary cloth soaked in an approved cleaning solution.

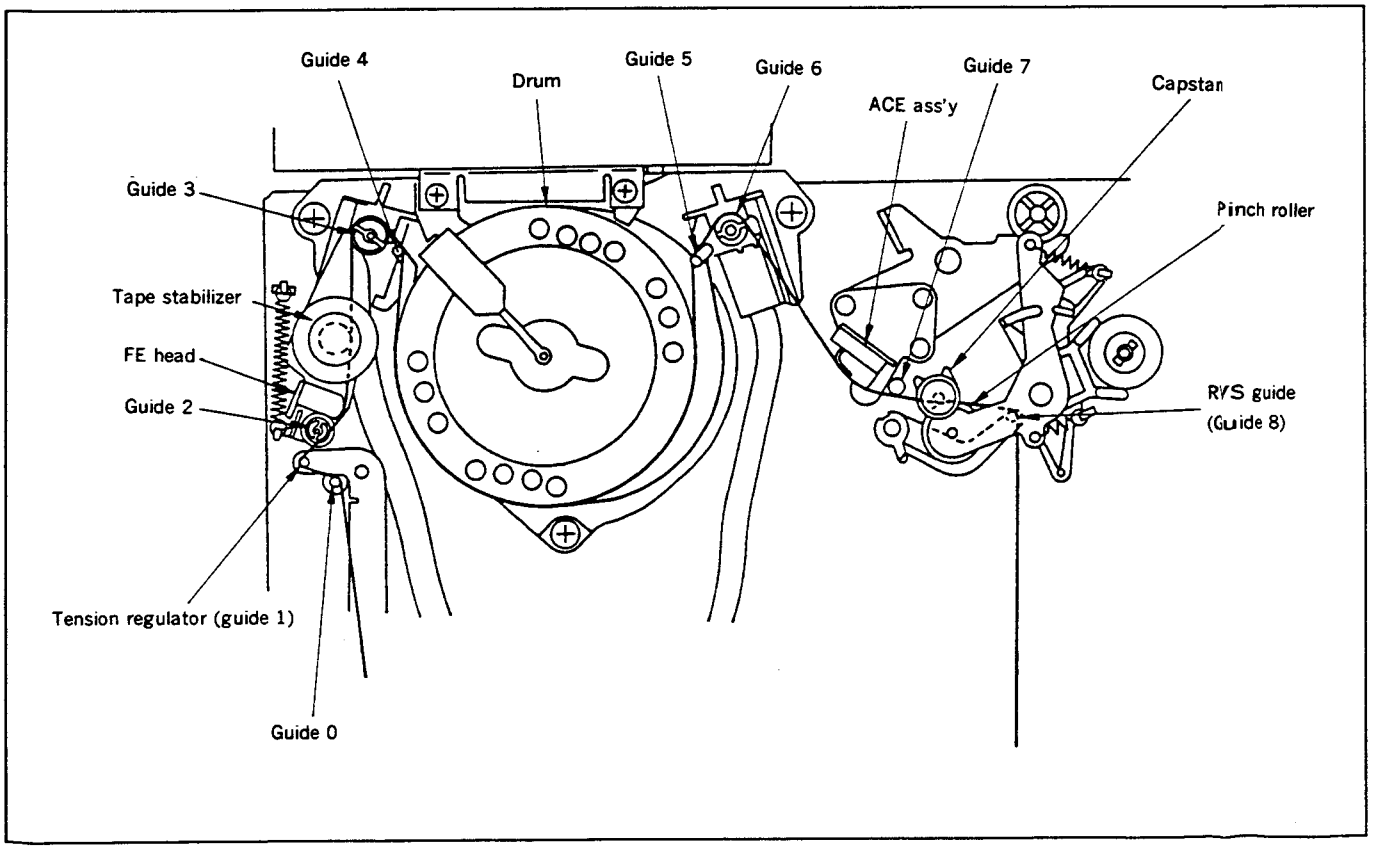

Fig. 2-1.

2-4. PERIODIC MAINTENANCE

Location of Maintenance and Check		User Hours / Replacement Part No.	500	1,000	1,500	2,000	2,500	3,000	3,500	4,000	4,500	5,000	Remarks

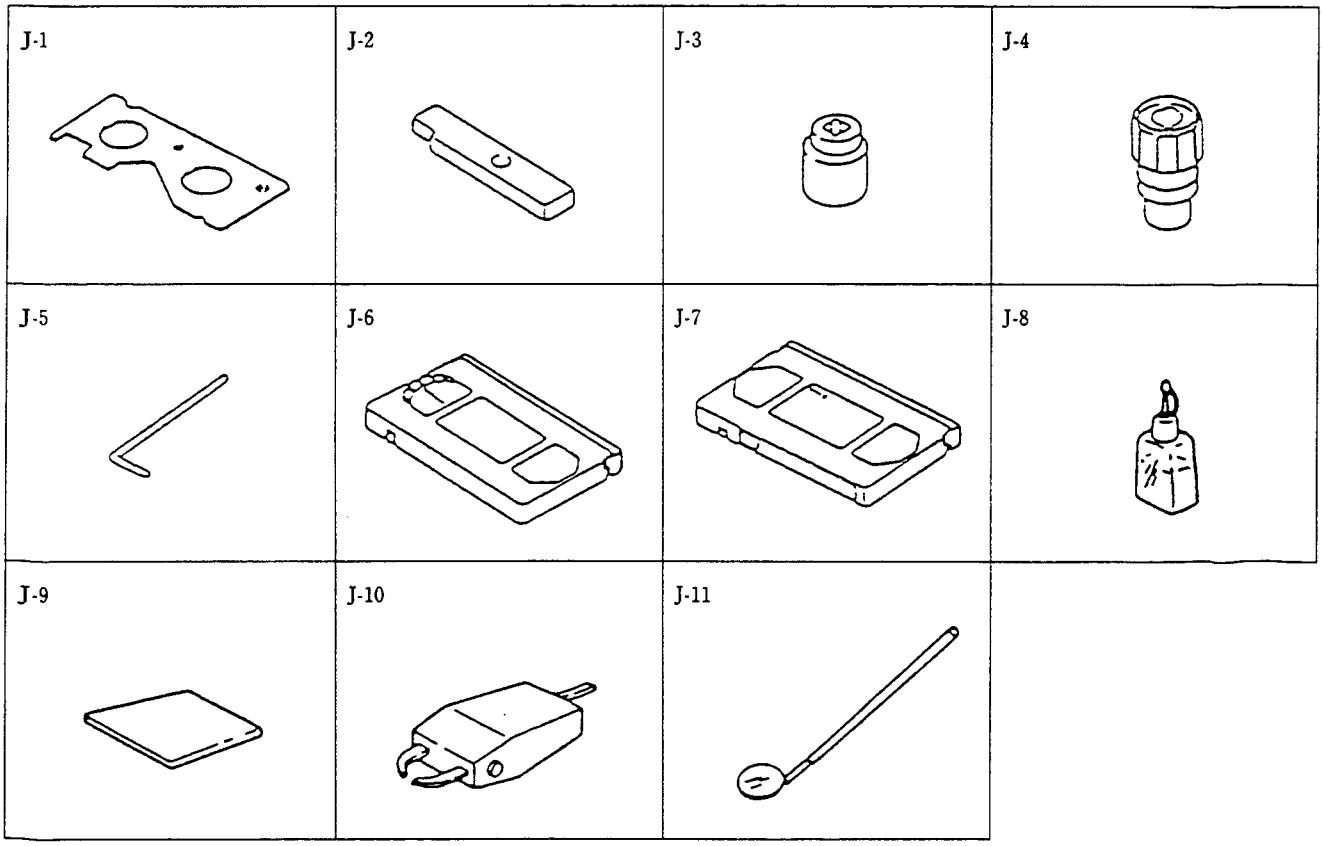

Fig. 2-2. Service tools and jigs

3. REPLACEMENT OF MAJOR COMPONENT PARTS OF THE DECK MECHANISM

Note : ○ Refer to "Replacement Method" in the Service Guide for replacing the cabinet and PC boards.
○ When mounting parts, reverse the replacement procedure while referring to "Precautions on Mounting Parts".

3-1. FL MECHANISM

3-1-1. FL door (Fig. 3-1.)

1) Press the claw ❶ in the direction of arrow Ⓐ, then remove the FL door ❷ in the direction of arrow Ⓑ.

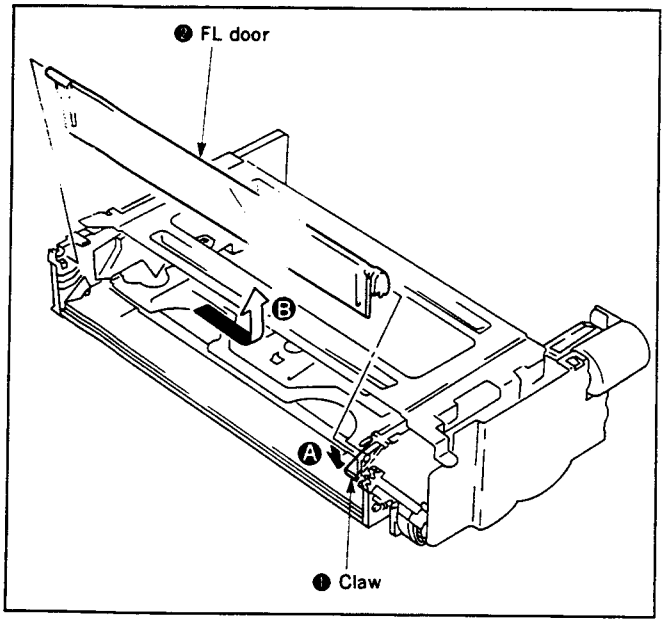

Fig. 3-1.

3-1-2. Erasure protection lever (Fig. 3-2)

1) Remove the spring ❶.
2) Disengage the claw ❷, then slide the erasure protection lever ❸ in the direction of arrow Ⓐ.
3) Disengage the erasure protection lever ❸ in the direction of arrow Ⓑ.

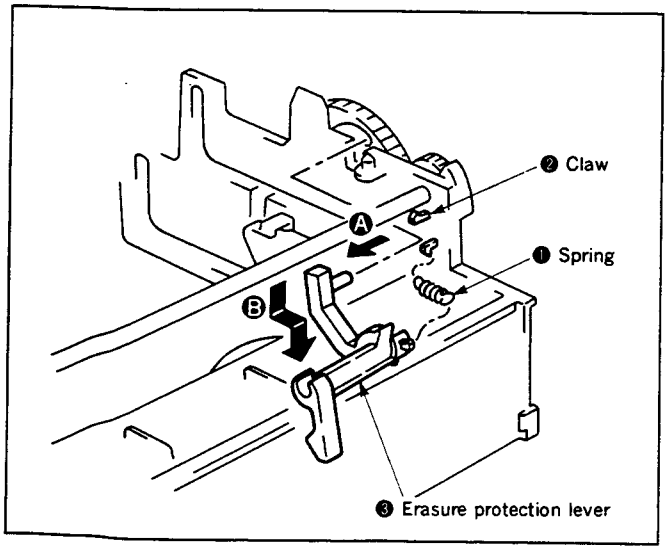

Fig. 3-2.

○ After grease coated parts such as gears are replaced, re-grease the replaced part.
○ Do not touch the guides (taped surface) and brake shoe directly with your fingers or grease them, etc.
○ Gears must be mounted so that they mesh with each other.

3-1-3. Gear cover ass'y (Fig. 3-3)

1) Disengage the four claws ❶, then remove the gear cover ass'y ❷.

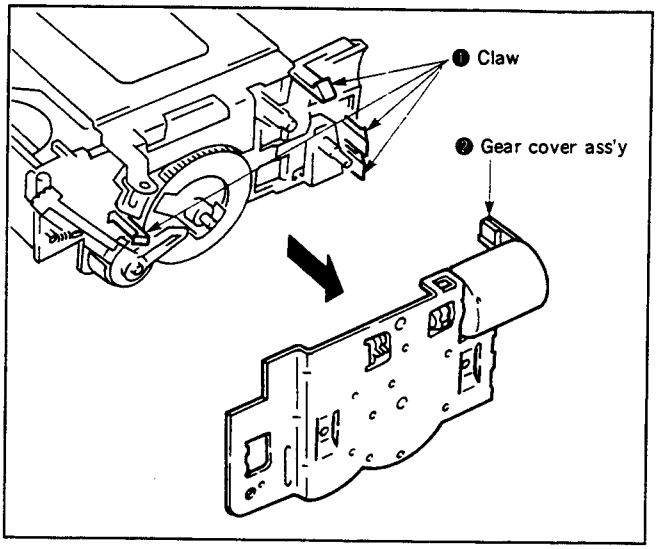

Fig. 3-3.

3-1-4. Loading motor, worm gear (FL), worm wheel (FL), worm bearing (Fig. 3-4)

1) Remove washer 3 ❶, then pull out the worm wheel (FL) ❷.
2) Remove the two screws ❸, then remove the loading motor ❹.
3) Remove the worm gear (FL) ❺ and worm bearing ❻.

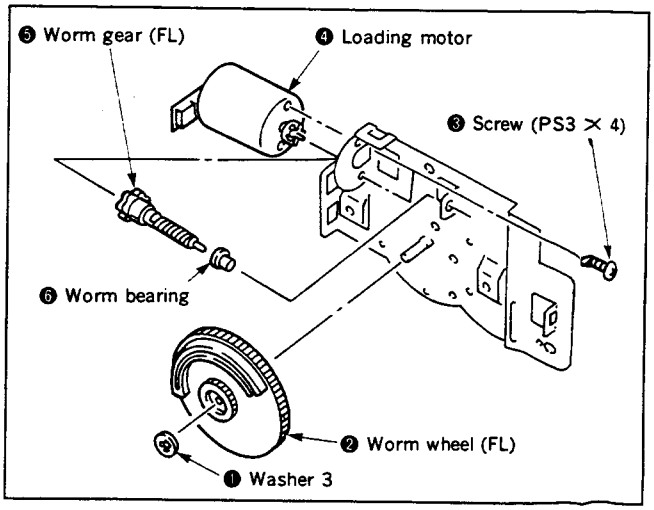

Fig. 3-4.

3-1-5. Door OPEN/CLOSE arm (Fig. 3-5)

1) Remove the spring ❶.
2) Pull out the door OPEN/CLOSE arm ❷.

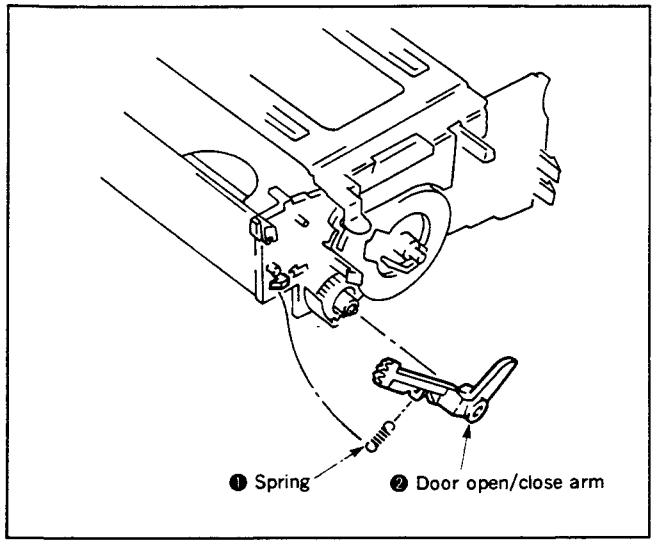

Fig. 3-5.

[Precautions on remounting] (Figs. 3-6 and 3-7.)

- When mounting the gear cover ass'y, match up the two holes on the gear cover ass'y with the two holes on the worm wheel (FL) and then with the hole on the right drive arm ass'y.
- Mesh the FL door and the door OPEN/CLOSE arm together as shown in Ⓐ section in the figure below.
- The erasure protection lever shaft must fit into the groove on the left drive arm ass'y.

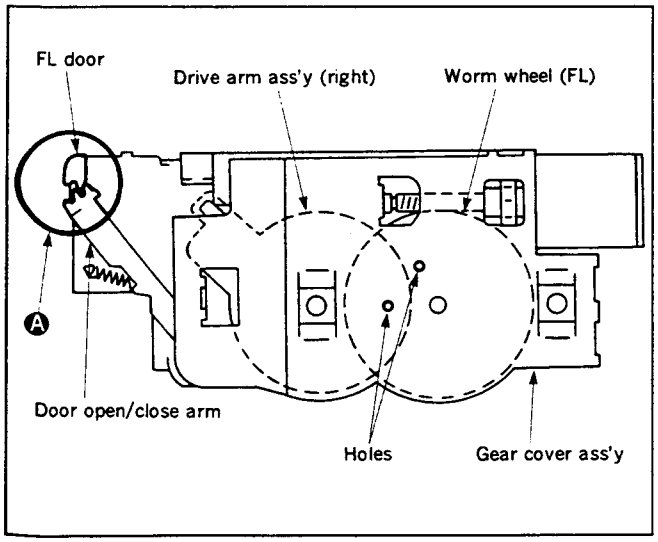

Fig. 3-6.

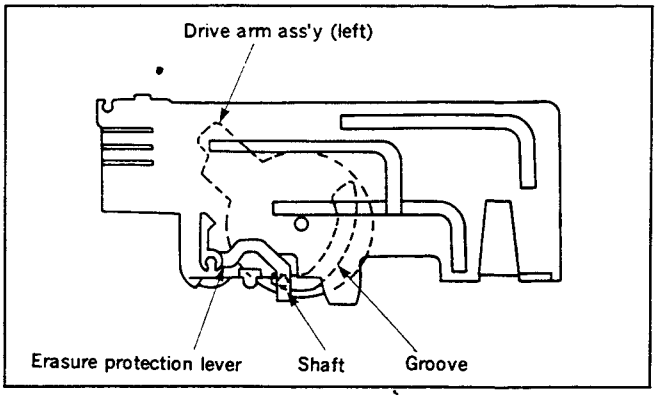

Fig. 3-7.

3-2. TS ASS'Y AND GUIDE ROLLER ASS'Y No. 2 (Fig. 3-8)

1) Remove the spring ❶.
2) Remove the TS ass'y ❷ in the direction of arrow Ⓐ.
3) Turn guide roller ass'y No. 2 ❸ in the direction of arrow Ⓑ and pull it out.

[Precautions on remounting]

- Clean the surface of guide roller No. 2 ❸ where the tape is attached.
- Apply lubricant over the section shown in Figure A below.

[Adjustment after replacement]

- Perform tape path adjustments as described in 4-1.

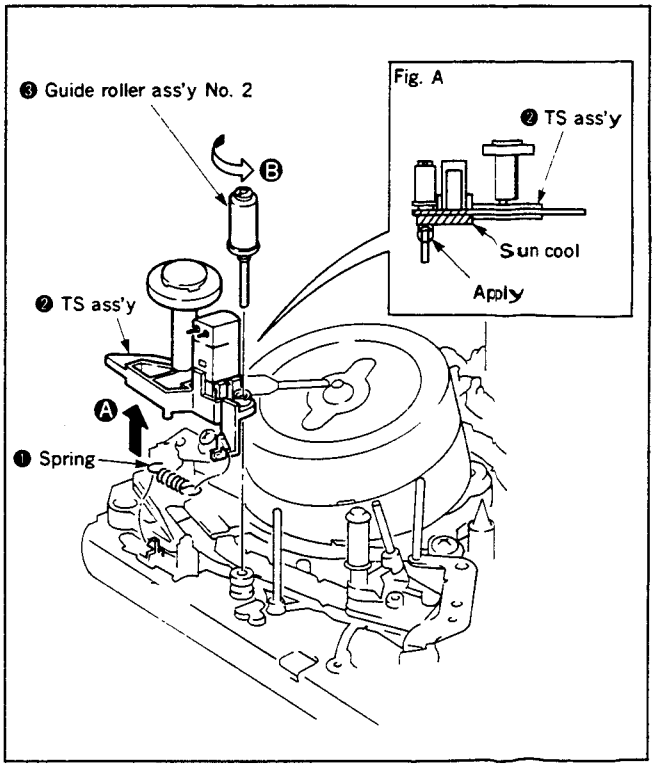

Fig. 3-8.

3-3. ACE ASS'Y (Fig. 3-9)

1) Slide the torsion coil spring ❶ in the direction of the arrow.
2) Remove the nylon nut N3 ❷, then pull out the ACE ass'y ❸.
3) Remove the ACE adjuster screw ❹.

[Precautions on remounting]

- Clean the surface of the ACE ass'y ❸ where the tape is attached.
- Hook both ends of the torsion coil spring ❶ to the ass'y as shown in Figure A below.
- Adjust the ACE adjuster screw ❹ to the height shown in Figure A.

[Adjustment after replacement]

- Perform tape path adjustments as described in 4-1.

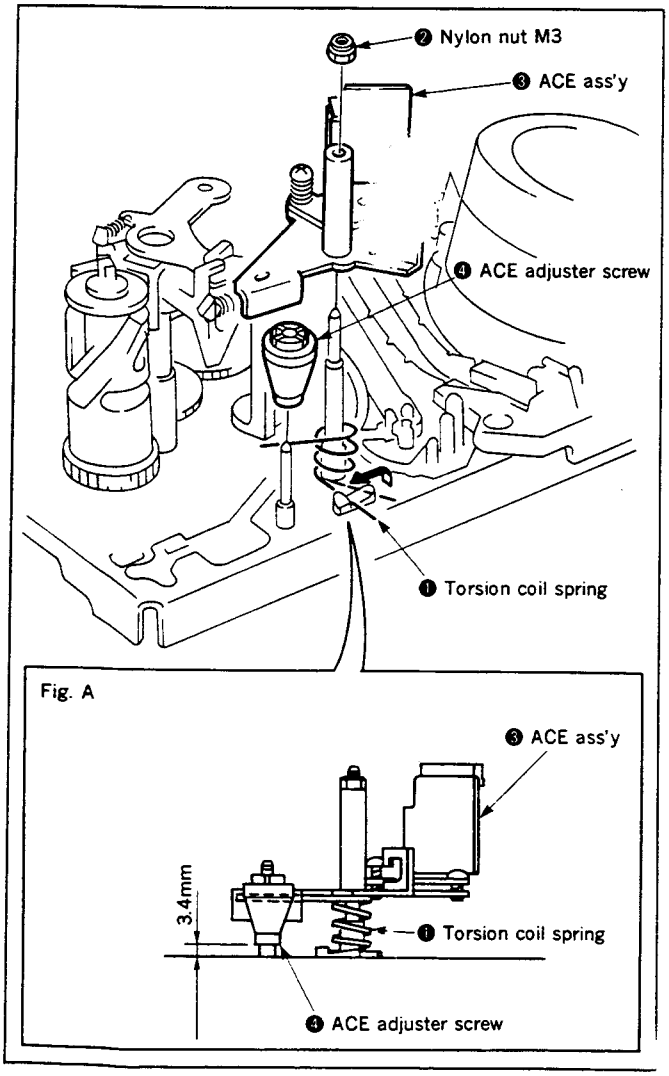

Fig. 3-9.

3-4. DRUM ASS'Y (Fig. 3-10)

1) Remove the three screws ❶, then remove the drum ass'y ❷.

[Precautions on remounting]

- Do not touch the head tips ❸ and the ground plate ❹ directly with your fingers or tools.
- Clean the surface of the drum ass'y ❷ where a tape is attached.
- The stopper ❺ must be attached at the point shown in the figure below
- Screws must be fastened with a 6kg•cm (±1kg•cm) screw fastening torque. (The screws can be mounted in any order.)

[Adjustment after replacement]

- Perform tape path adjustments as described in 4-1.

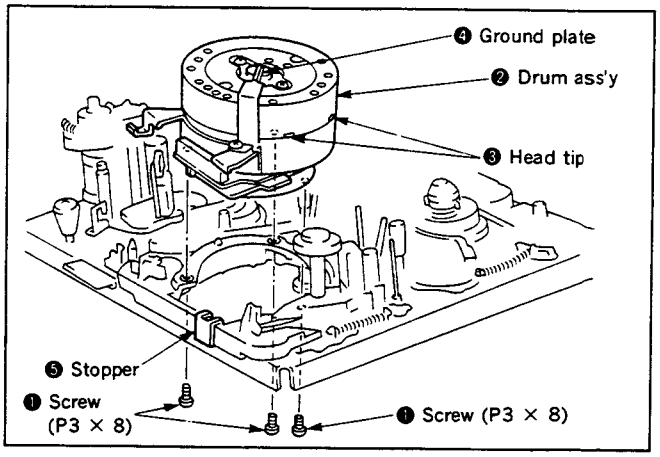

Fig. 3-10.

3-5. DRUM BASE ASS'Y (Fig. 3-11)

1) Remove the drum. (Refer to 3-4.)
2) Remove the three screws ❶, then remove the drum base ass'y ❷.

[Precautions on remounting]

- The spacer ❸ for the drum base must be mounted in its previous position as shown in the figure below. (Note that some units do not feature the spacer ❸.)
- Fastening torque must be 10kg•cm (±1kg•cm)
- The screws must be mounted in order of (a),(b) and (c).

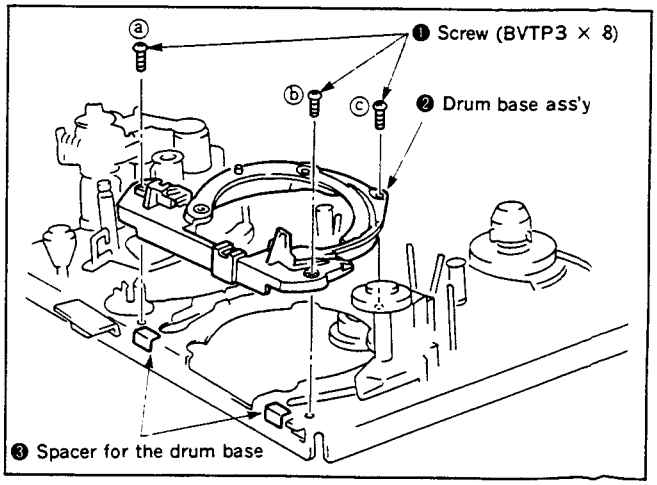

Fig. 3-11.

3-6. PINCH ROLLER ASS'Y AND ELEVATOR CAM (Fig. 3-12)

1) Remove the two claws ❶, then pull out the stopper ❷.
2) Pull out the pinch roller ass'y ❸.
3) Pull out the elevator cam ❹.

[Precautions on remounting]

○ Clean the surface of the pinch roller ass'y ❸ where the tape is attached.
○ Match up the ▯ marks on the elevator cam ❹ and cam gear, press ❺.

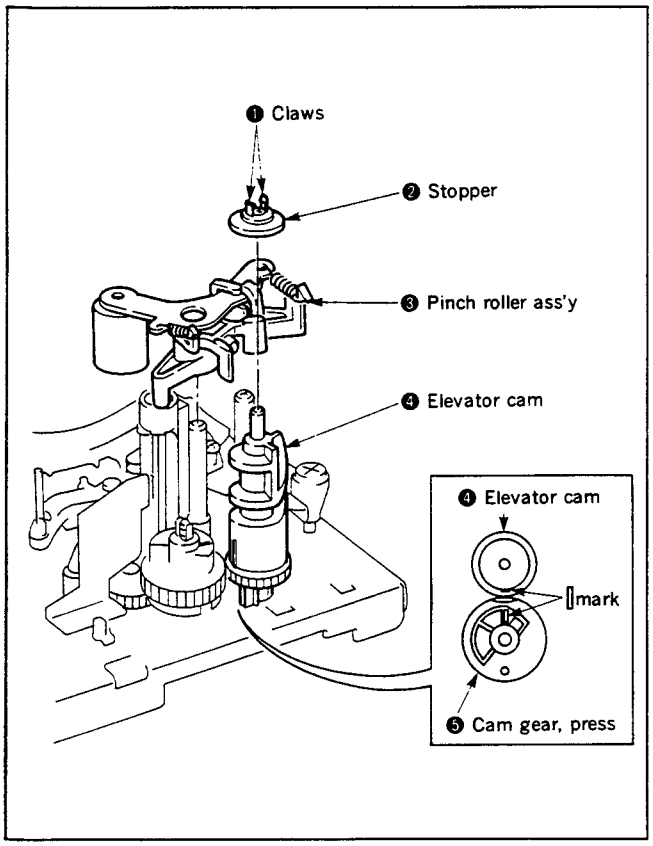

Fig. 3-12.

3-7. CAM GEAR, PRESS AND TRANSMISSION GEAR (Fig. 3-13)

1) Remove the pinch roller ass'y. (Refer to 3-6.)
2) Remove the screw ❶, then remove the lid release plate ❷.
3) Remove the two claws ❸, then pull out the cam gear, press ❹.
4) Remove the washer 2 ❺, then pull out the transmission gear ❻.

[Precautions on remounting]

○ Check the top and bottom of the transmission gear ❻.
○ Match up the hole ❼ on the chassis with the hole ❼ on the cam gear, press ❹.
○ Match up the ▯ mark on the cam gear, press ❹ with the ▯ mark on the alleviator cam ❽.

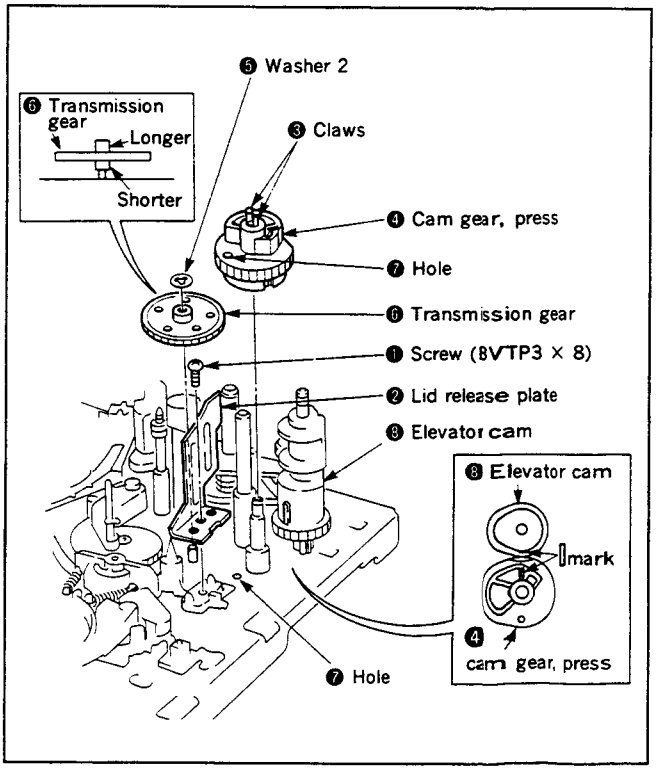

Fig. 3-13.

3-8. RVS ARM ASS'Y AND RVS CAM GEAR (Fig. 3-14)

1) Remove the nylon nut M2 ❶ and plastic washer ❷.
2) Disengage the claw ❸, then pull out the RVS arm ass'y ❹.
3) Remove washer 2 ❺, then pull out the RVS cam gear ❻.

[Precautions on remounting]

- The holes ❼ in the chassis and in the RVS cam gear ❻ must match up. Also, make sure to match up the holes ❾ on the cam gear, press ❽ and the chassis.
- The spring ❿ must be hooked as shown in Fig. A below.
- Clean the surface of the RVS arm ass'y ❹ where a tape is attached.
- Apply 1/2 drop of lubricant to the shaft ⓫.

[Adjustment after replacement]

- Perform tape path adjustments as described in 4-1.

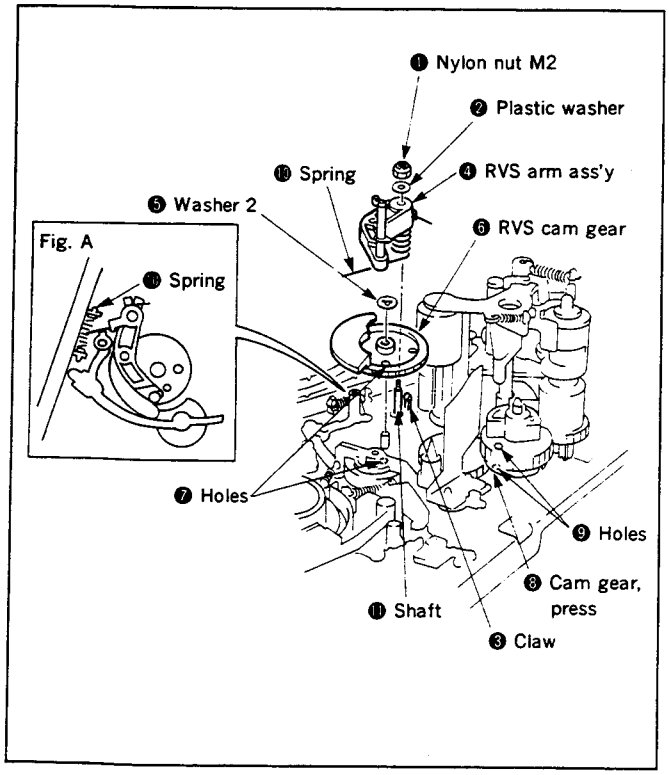

Fig. 3-14.

3-9. GUIDE No. 7 (Fig. 3-15)

1) Remove the nylon nut M3 ❶.
2) Pull out guide flange No. 7 ❷, guide sleeve No. 7 ❸, guide flange No. 7 ❹ and compression coil spring ❺ in the given order.

[Precautions on remounting]

- Clean the surface of the guide sleeve No. 7 ❸ where the tape is attached.
- Adjust the height of guide No. 7 to the height shown in Fig. A below.

[Adjustment after replacement]

- Perform tape path adjustments as described in 4-1.

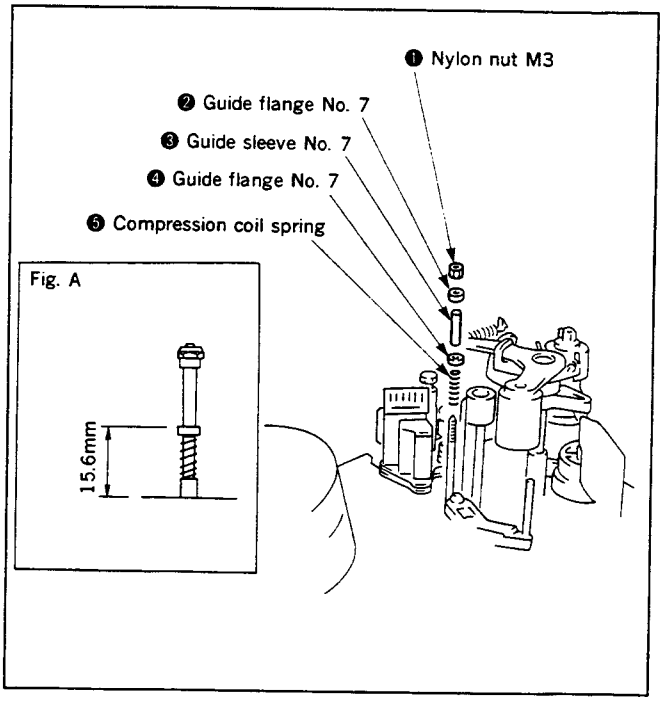

Fig. 3-15.

3-10. S-BRAKE ASS'Y, T-BRAKE ASS'Y (Fig. 3-16)

1) Remove the spring ❶.
2) Disengage the claw ❷, then pull out the S-brake ass'y ❸.
3) Disengage the claw ❹, then pull out the T-brake ass'y ❺.

[Precautions on remounting]

- ○ Do not touch the brake shoes for the respective S-brake ❸ and T-brake ❺ assy's directly with your fingers.
- ○ Do not hold on to the S-brake ❸ and T-brake ❺ assy's by the arms when inserting them.
- ○ The T-brake ass'y ❺ must be positioned above the S-brake ass'y ❸ as shown in Fig. A below.

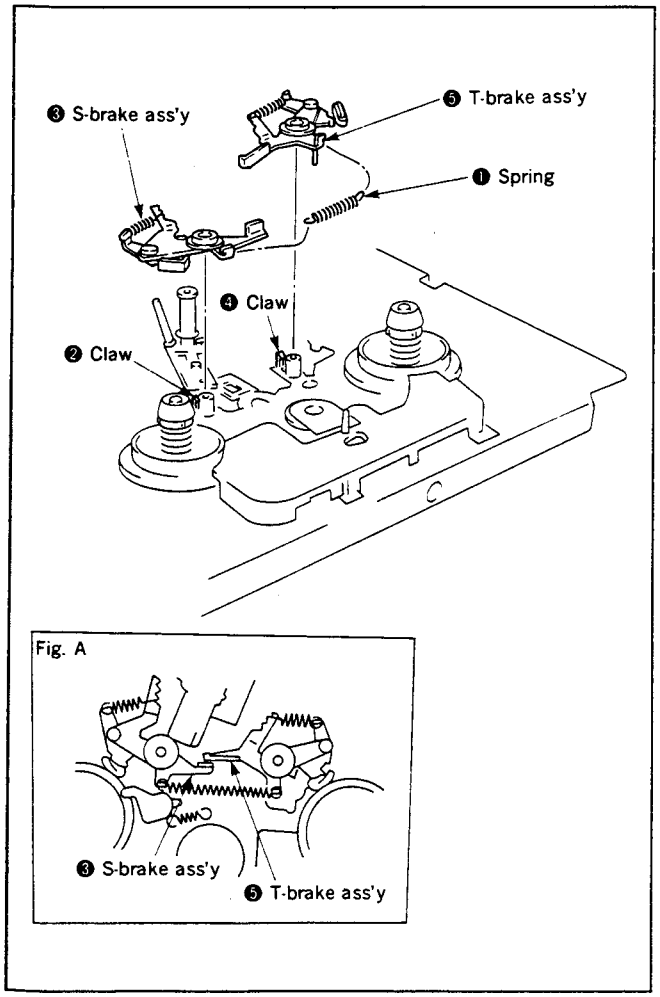

Fig. 3-16.

3-11. T-SOFT BRAKE ASS'Y REV BRAKE ARM (Fig. 3-17)

1) Remove the end of the spring ❶ from the REV brake arm ❷.
2) Remove the end of the spring ❸ from the chassis.
3) Disengage the claw ❹, then pull out the T-soft brake ass'y ❺.
4) Disengage the claw ❻, then pull out the REV brake arm ❷.

[Precautions on remounting]

- ○ Do not touch the brake shoe of the T-soft brake ass'y ❺ directly with your fingers.

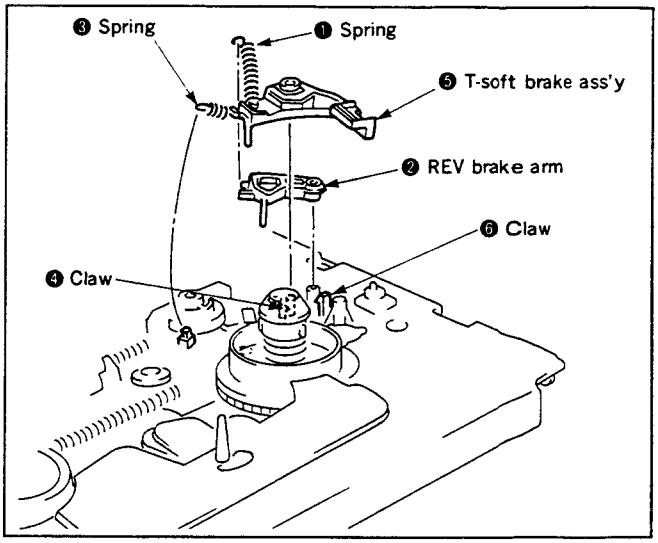

Fig. 3-17.

3-12. S-SOFT BRAKE ARM ASS'Y (Fig. 3-18)

1) Unhook the end of the spring ❶ from the chassis.
2) Disengage the claw ❷, then pull out the S-soft brake arm ass'y ❸.

[Precautions on remounting]

- ○ The S-soft brake arm ass'y must not clamp down the tension regulator band ass'y ❹ nor be positioned below the tension regulator band ❹.

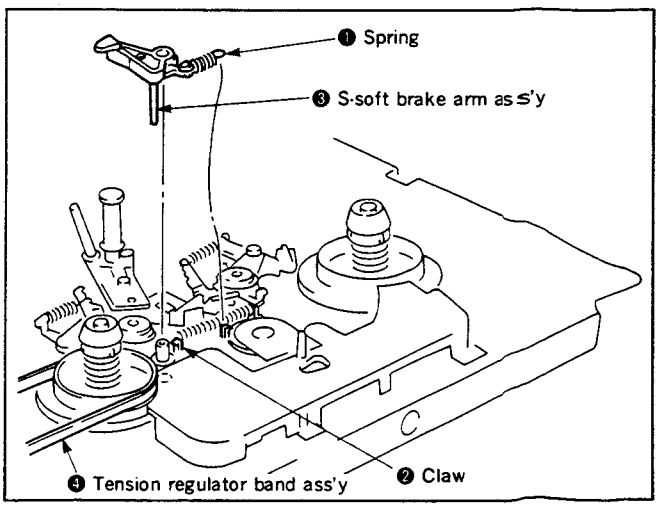

Fig. 3-18.

3-13. S-GUIDE AND T-GUIDE ROLLER ASSY'S (Fig. 3-19)

1) Loosen the setscrew ❶, then remove the S-guide roller ass'y ❷ by turning it in the direction of the arrow Ⓐ.
2) Loosen the setscrew ❸, then remove the T-guide roller ass'y ❹ by turning it in the direction of arrow Ⓑ.

[Precautions on remounting]

○ Clean the surfaces of the S-guide roller ❷ and T-guide roller assy's ❹ where a tape is attached.

[Adjustment after replacement]

○ Perform tape path adjustments as described in 4-1.

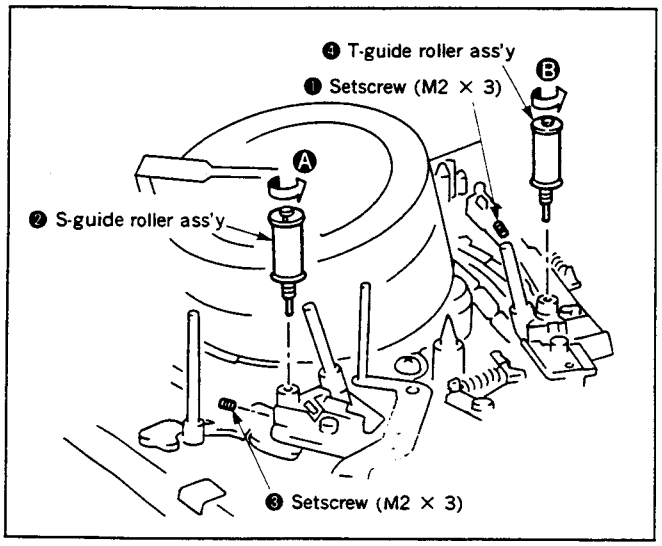

Fig. 3-19.

3-14. REEL LOCK RELEASE AND REW GEAR (Fig. 3-20)

1) Disengage the two claws ❶, then remove the reel lock release ❷ along with the spring ❸ (while the spring is still attached).
2) Next, pull out the REW gear ❹ with the spring bearing ❺ still attached).

[Precautions on remounting]

○ Make sure that the small thrust bearing ❻ remains attached.
○ Make sure that the two claws ❶ lock the real lock release ❷ in place.
○ Apply 1/2 drop of lubricant to the shaft ❼.
○ Make sure that the spring ❸ adheres to the reel lock release ❷ and that it fits inside the rib of the REW gear ❹.
○ Mount the REW gear ❹ by meshing it with gear ❽.

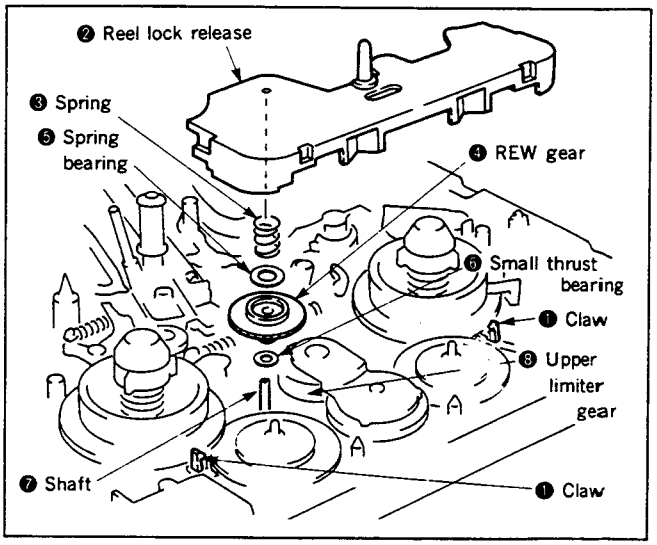

Fig. 3-20.

3-15. TENSION REGULATOR ARM ASS'Y, TENSION REGULATOR BAND ASS'Y (Fig. 3-21)

1) Remove the reel lock release ass'y. (Refer to Fig. 3-14.)
2) Disengage the three claws marked ❶ and the claw marked ❷, then remove the tension regulator band ass'y ❸.
3) Unhook the end of the spring ❹ from the chassis.
4) Disengage the claw ❺, then pull out the tension regulator arm ass'y ❻.

[Precautions on remounting]

- ○ Roll up the tension regulator band ❸ on the S-reel by turning the S-soft brake arm ass'y ❼ in the direction of the arrow.
- ○ Hook the spring ❹ at the center of the spring hook ❽.
- ○ Do not touch the brake shoe of the tension regulator band ass'y ❸ directly with your fingers.
- ○ Mount the tension regulator arm ass'y ❻ at the position shown in Fig. A below.

[Adjustment after replacement]

- ○ Check the back tension. (Refer to 4-1-1.)
- ○ Perform tape path adjustments as described in 4-1.

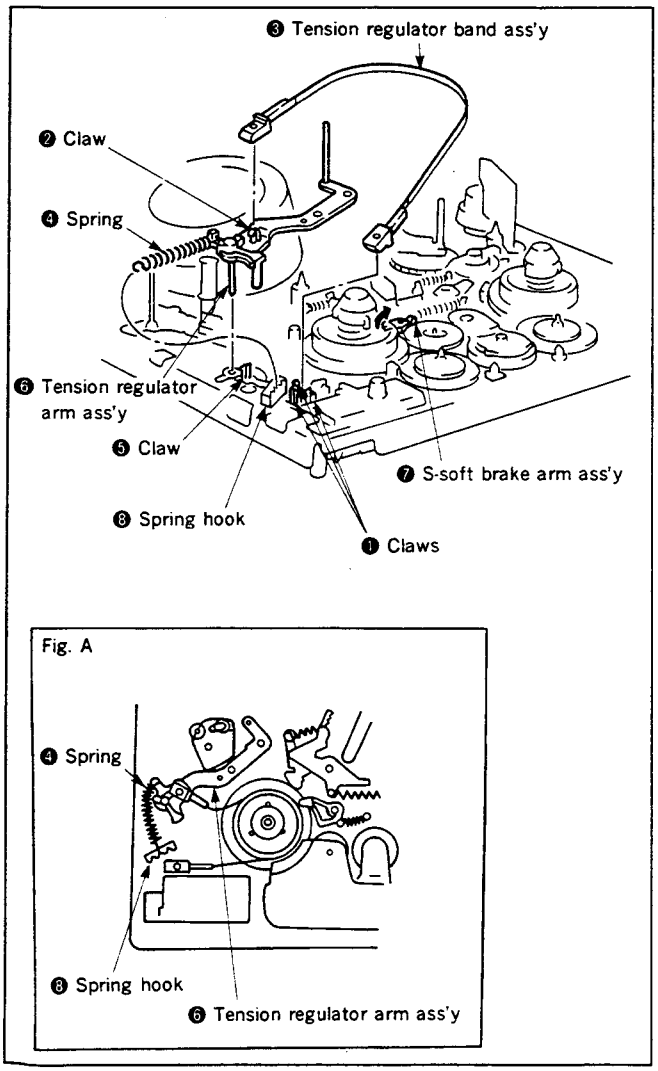

Fig. 3-21.

3-16. S TAKE-UP ASS'Y (Fig. 3-22)

1) Remove the tension regulator arm ass'y and the tension regulator band ass'y. (Refer to 3-15.)
2) Unhook the end of the spring ❶ from the S take-up arm ❷.
3) Disengage the two claws ❸, then remove the S take-up ass'y ❹.

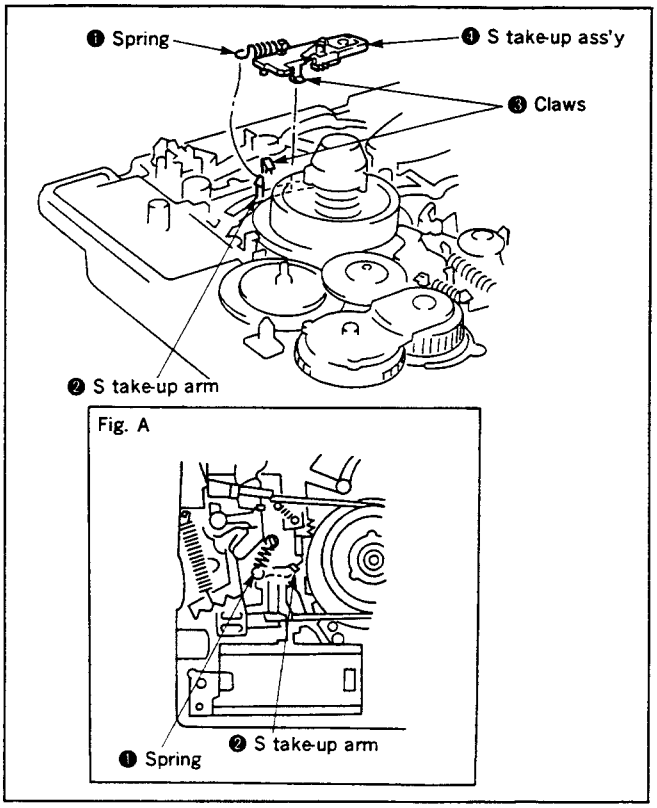

Fig. 3-22.

3-17. S-REEL ASS'Y (Fig. 3-23)

1) Remove the S-soft brake arm ass'y. (Refer to 3-12.)
2) Remove the reel lock release. (Refer to 3-14.)
3) Remove the tension regulator band ass'y. (Refer to 3- 15.)
4) Turn the S-brake ass'y ❶ in the direction of the arrow.
5) Pull out the S-reel ass'y ❷.

[Precautions on remounting]

- ○ At least one reel stand thrust bearing ❸ must be attached (but not more than two).
- ○ Do not touch the outer edge of the S-reel ass'y ❷ directly with your fingers.
- ○ Apply 1/2 drop of lubricant over the shaft ❹.
- ○ Mount the S-reel ass'y ❷ while meshing it with the relay gear ❺.

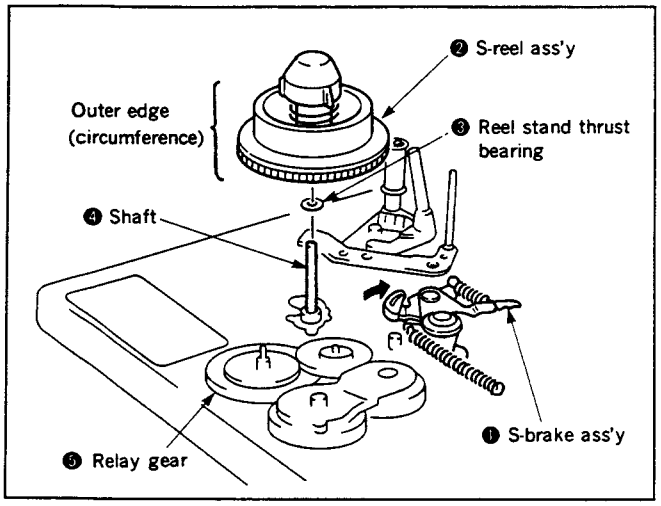

Fig. 3-23.

3-18. T-REEL ASS'Y (Fig. 3-24)

1) Remove the T-soft brake ass'y. (Refer to 3-11.)
2) Remove the reel lock release ass'y. (Refer to 3-14.)
3) Turn the T-brake ass'y ❶ in the direction of the arrow.
4) Pull out the T-reel ass'y ❷.

[Precautions on remounting]

- ○ At least one reel stand thrust bearing ❸ must be attached (but not more than two).
- ○ Do not touch the outer edge of the T-reel ass'y ❷ directly with your fingers.
- ○ Apply 1/2 drop of lubricant on the shaft ❹.
- ○ Mount the T-reel ass'y ❷ while meshing it with the relay gear ❺.

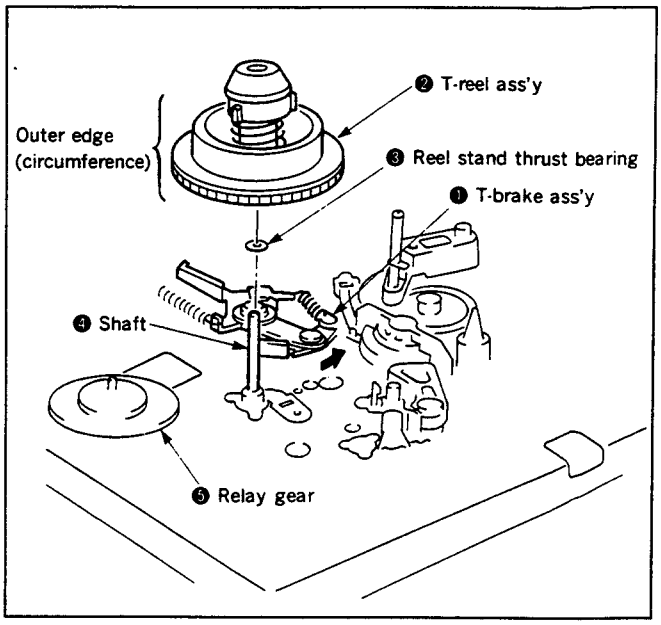

Fig. 3-24.

3-19. PENDULUM ARM ASS'Y (Fig. 3-25)

1) Remove the reel lock release ass'y. (Refer to 3-14.)
2) Remove the washer 2 ❶, then pull out the pendulum arm ass'y ❷.

[Precautions on remounting]

- ○ Fit the boss on the pendulum cap ❸ into the gap in the pendulum slide plate ❹.
- ○ The plastic slider ❺ must be attzched.
- ○ Apply 1/2 drop of lubricant on the shaft ❻.
- ○ Mount the pendulum arm ass'y ❷ by meshing it with the upper limiter gear ❼.

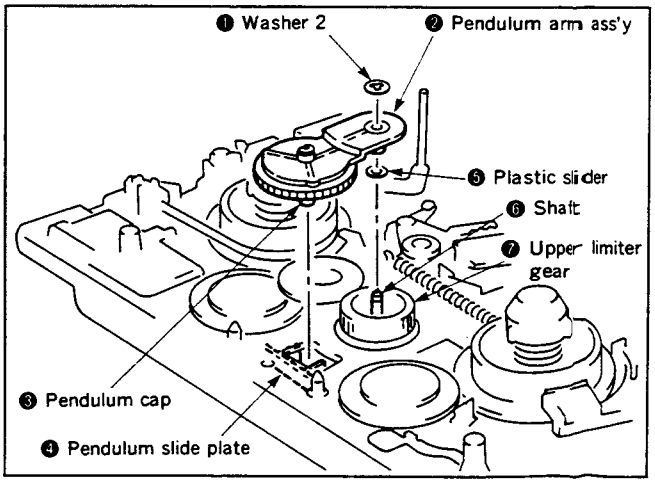

Fig. 3-25.

3-20. RELAY GEAR (Fig. 3-26)

1) Remove the reel lock release and REW gear. (Refer to 3-14.)
2) Remove the S-reel ass'y. (Refer to 3-17.)
3) Remove the T-reel ass'y. (Refer to 3-18).
4) Pull out the two relay gears ❶.

[Precautions on remounting]

○ The relay gears ❶ must rotate smoothly after remounting.
○ Apply 1/2 drop of lubricant to the respective shafts ❷.

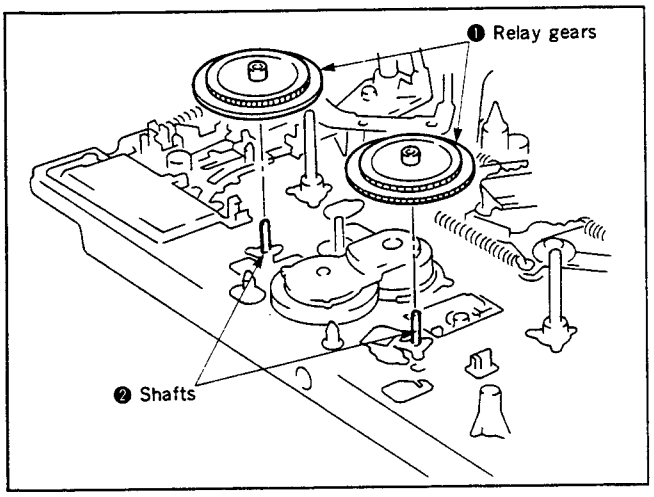

Fig. 3-26.

3-21. ADJUSTER ARM ASS'Y (Fig. 3-27)

1) Remove screw ❶.
2) Remove washer ❻.
3) Remove the end of the spring ❷ hooked to the chassis.
4) Remove the end of the timing belt ❸ from the capstan motor arm ass'y.
5) Disengage the claw ❹, then remove the adjuster arm ass'y.

[Precautions on remounting]

○ First mount the adjuster arm ass'y ❺, timing belt ❸ and spring ❷, then attach the washer ❻ and fasten the screw ❶.
○ The screw fastening torque must be within 5kg•cm (±1kg•cm).

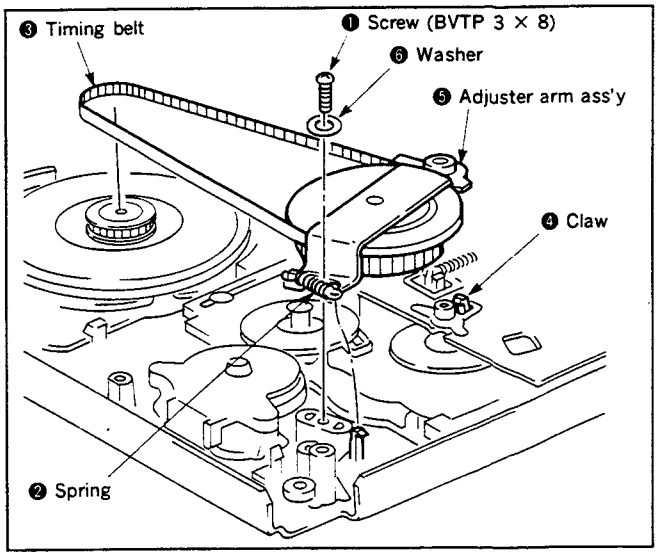

Fig. 3-27.

3-22. CAP BRAKE ASS'Y (Fig. 3-28)

1) Loosen the screw ❶, then push the timing belt ❷ in the direction of the arrow.
2) Unhook the end of the spring ❸ from the chassis.
3) Disengage claw ❹, then pull out CAP brake ass'y ❺.

[Precautions on remounting]

○ Do not touch the brake shoe of the CAP brake ass'y ❺ directly with your fingers.

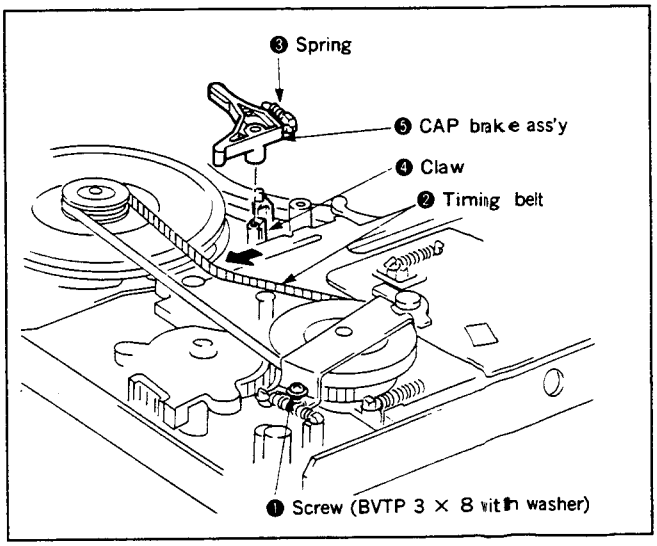

Fig. 3-28.

3-23. CAPSTAN MOTOR (Fig. 3-29)

1) Turn the ACE ass'y ❶ in the direction of arrow Ⓐ as shown in Fig. A below, then remove three screws ❷.
2) Remove screw ❸, then remove the rotor clamp ❹.
3) Turn the CAP brake ass'y ❺ in the direction of arrow Ⓑ, then pull out the capstan motor ❻.

[Precautions on remounting]

- ○ Clean the section of the capstan motor ❻ where the tape is attached.
- ○ Do not touch the brake shoe of the CAP brake ass'y ❺ directly with your fingers.
- ○ Of the three screws ❷, first fasten screw A temporarily, then fasten screws B and C firmly, followed by screw A.
- ○ The screw fastening torque must be within 3kg•cm ± 1kg•cm.

[Adjustments after mounting]

- ○ Perform tape path adjustments as described in 4-1.

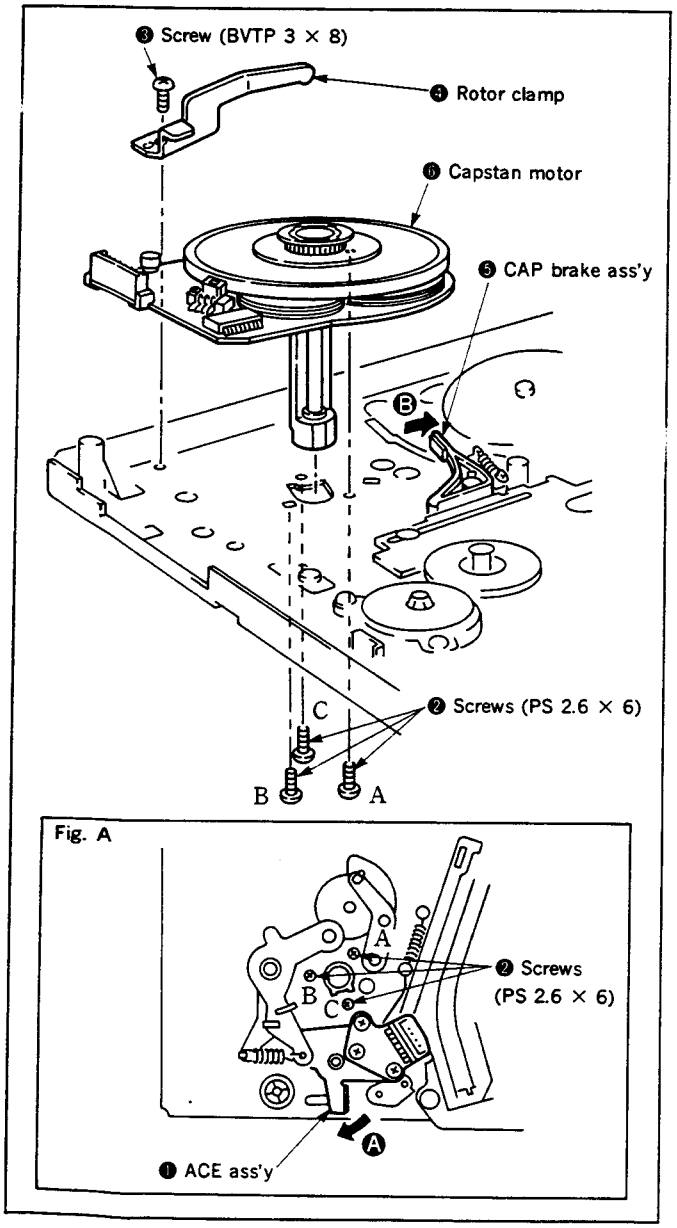

Fig. 3-29.

3-24. ROTARY SWITCH (Fig. 3-30)

1) Remove the adjuster arm ass'y. (Refer to 3-21.)
2) Remove the screws ❶ and ❷, then pull out the rotary switch ❸.

[Precautions on remounting]

- ○ Match up the ● mark on the rotary switch ❸ with the ▲ mark on the RKB cam gear ❹ as shown in Fig. A.
- ○ Match up holes ❻ on the pendulum arm ❺ and the chassis.

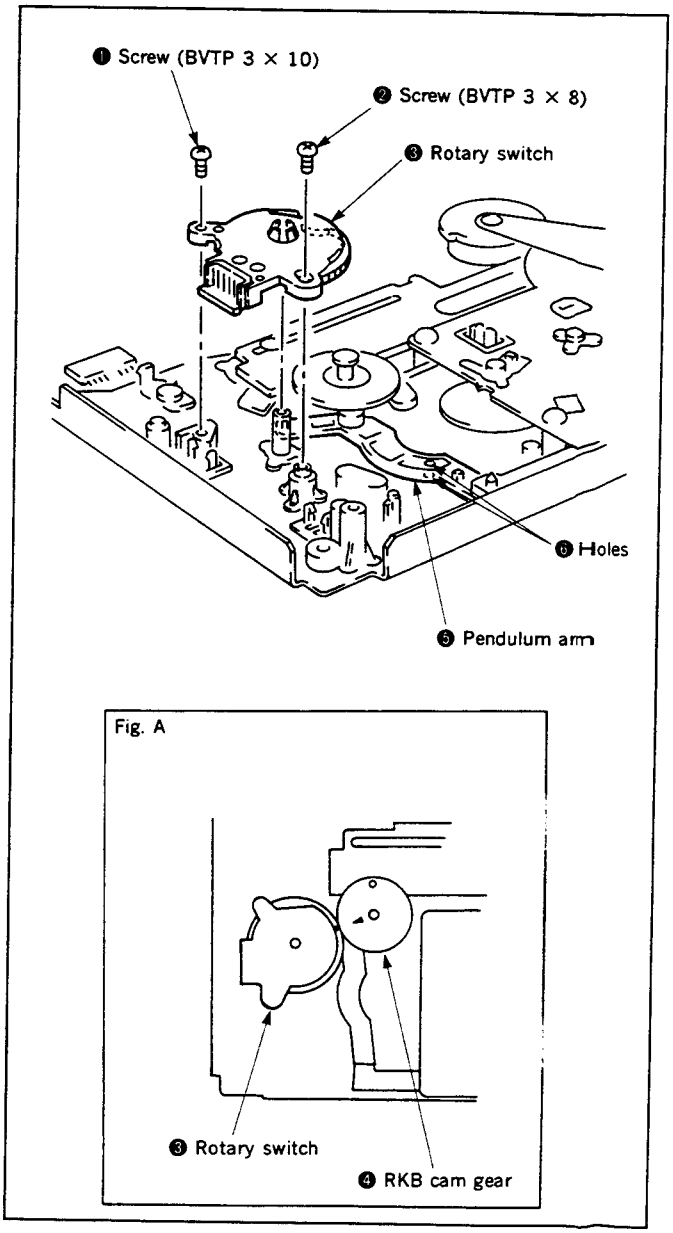

Fig. 3-30.

3-25. RKB CAM GEAR (Fig. 3-31)

1) Remove the adjuster arm ass'y. (Refer to 3-22.)
2) Remove washer 2 ❶, then pull out the RKB cam gear ❷.

[Precautions on remounting]

- ○ When the limiter arm ❸ is pushed in the direction of the arrow, the pin must fit into the notch on the RKB cam gear ❷.
- ○ The ■ mark on rotary switch ❺ must match up with the ◀ mark on the RKB cam gear ❷ as shown in Fig. A.
- ○ Apply 1/2 drop of lubricant to shaft ❻.
- ○ Match up the holes ❹ on the RKB cam gear ❷ and the mode slide plate.

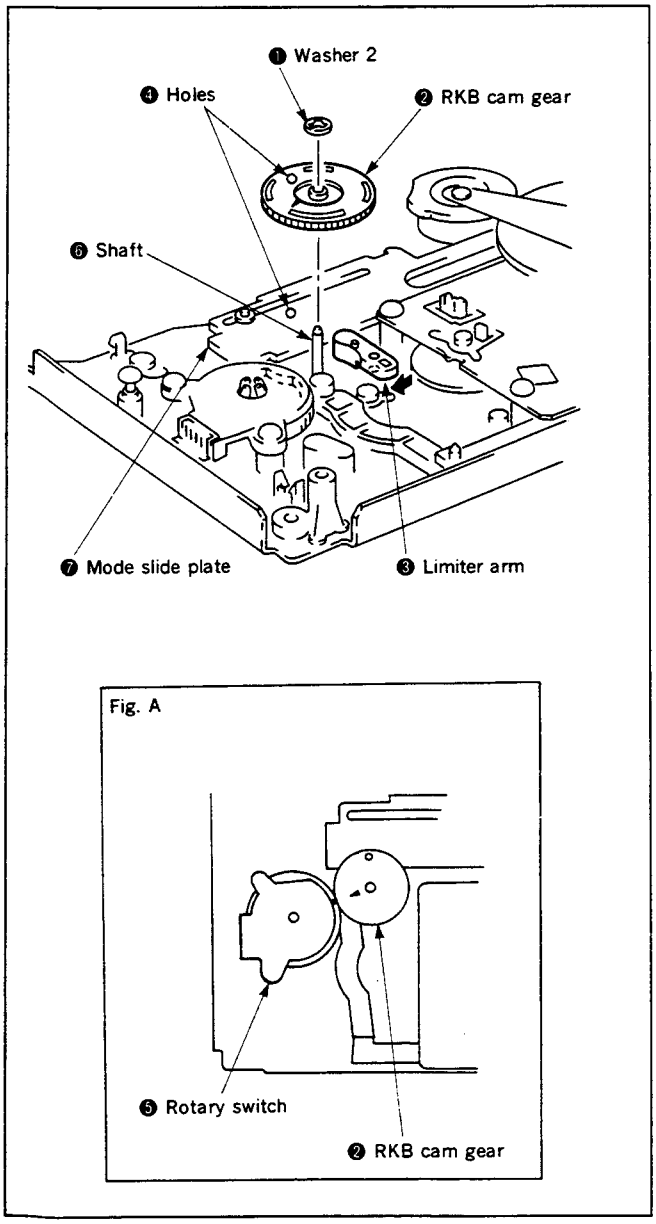

Fig. 3-31.

3-26. SUB-CHASSIS ASS'Y (Fig. 3-32)

1) Remove the reel lock release arm and REW gear. (Refer to 3-15.)
2) Remove the pendulum arm ass'y. (Refer to 3-19.)
3) Remove the adjuster arm ass'y. (Refer to 3-22.)
4) Remove the three screws ❶, then remove sub-chassis ass'y ❷.

[Precautions on remounting]

- ○ The switching arm ❸ must be switched in the direction of the arrow.
- ○ The screws must be fastened in order of a, b and c.
- ○ Mount the sub-chassis carefully so as not to damage the gear.
- ○ The corner edge of the lug terminal ❹ must fit into the gap between the chassis ass'y ❷ and mechanism chassis.

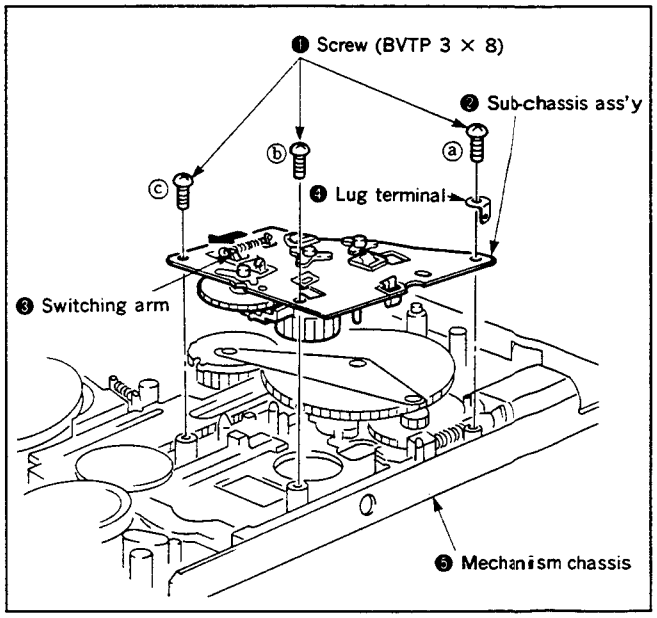

Fig. 3-32.

3-27. PENDULUM SLIDE PLATE, PENDULUM ARM (Fig. 3-33)

1) Remove the rotary switch. (Refer to 3-24.)
2) Remove the RKB cam gear. (Refer to 3-25.)
3) Remove the sub-chassis ass'y. (Refer to 3-26.)
4) Disengage the two claws ❶, then pull out the pendulum slide plate ❷.
5) Unhook the spring ❸.
6) Disengage the claw ❹, then pull out pendulum arm ❺.

[Precautions on remounting]

○ The shaft ❻ must fit into hole ❼.

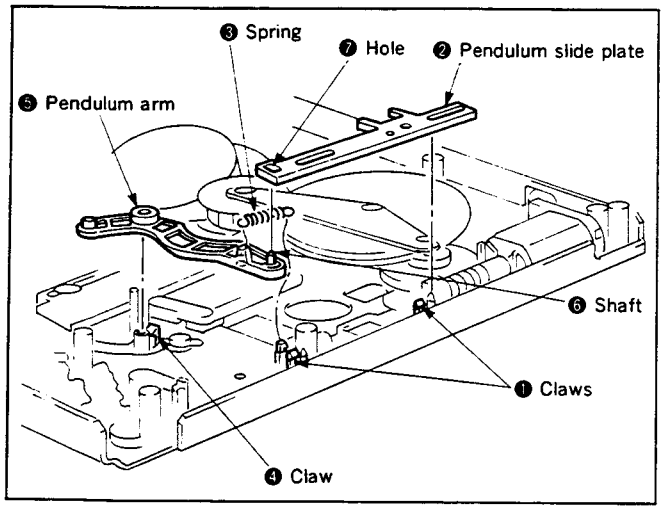

Fig. 3-33.

3-28. THE LIMITER ARM AND LIMITER SLIDE PLATE (Fig, 3-24)

1) Remove the RKB cam gear. (Refer to 3-25.)
2) Remove the sub-chassis. (Refer to Fig. 3-26.)
3) Disengage the claw ❶, then pull out the limiter arm ❷.
4) Disengage the two claws ❸, then pull out the limiter slide plate ❹.

[Precautions on remounting]

○ The shaft ❺ must fit into the hole ❻.

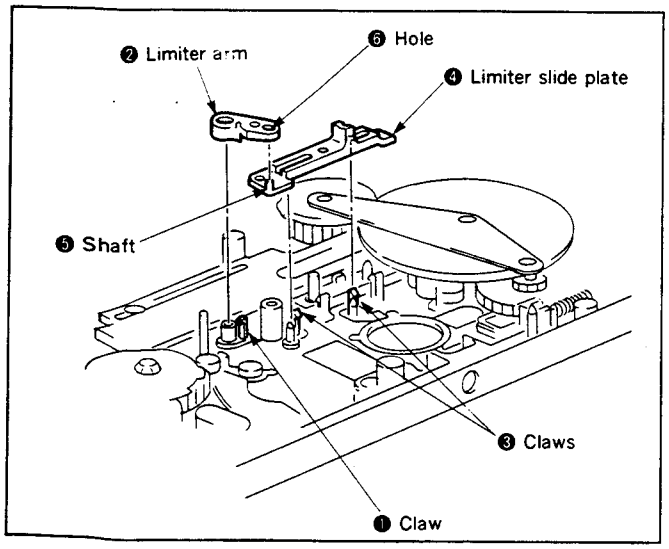

Fig. 3-34.

3-29. CAM MOTOR (Fig. 3-35)

1) Remove the sub- chassis ass'y. (Refer to 3-26.)
2) Disengage the six claws ❶, then remove the cam motor ❷ and worm gear ❸.

[Precautions on remounting]

○ Check the meshing of cam motor ❷ and worm gear ❸.

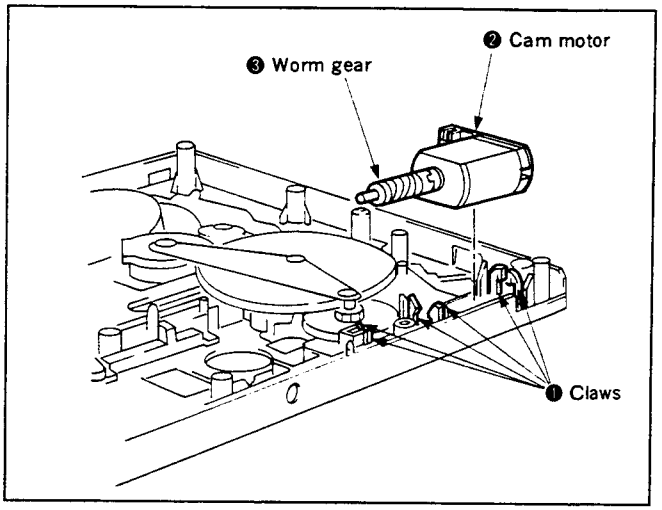

Fig. 3-35.

3-30. CAM GEAR (Fig. 3-36)

1) Remove the three washers 2 ❶, then pull out the cam gear holder ❷.
2) Pull out the cam gear ❸.

[Precautions on remounting]

○ Match up the right loading gear ass'y, the tension regulator arm, the S take-up arm, the work wheel, the brake arm and the mode slide plate with respective holes ❹ to ❾ on the chassis in that order.
○ Match up the hole ❿ on the mode slide plate with the hole ❿ in cam gear ❸.
○ Apply 1/2 drop of lubricant to the shaft ⓫.

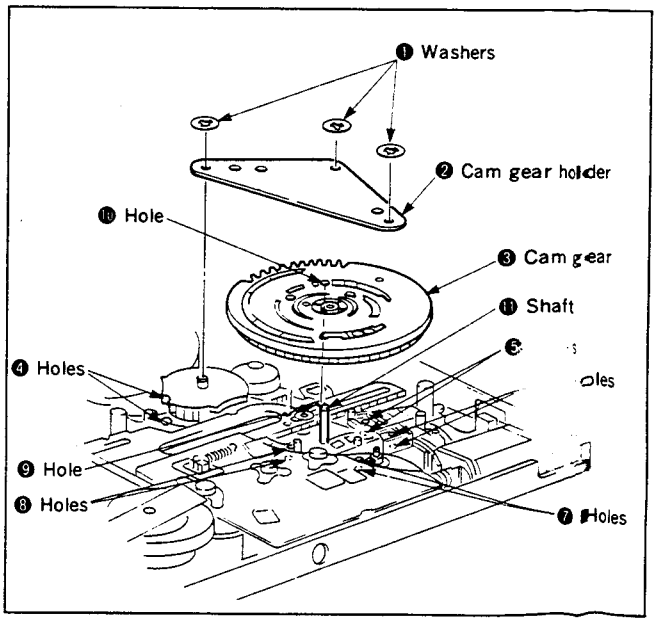

Fig. 3-36.

3-31. TENSION REGULATOR ARM, S TAKE-UP ARM (Fig. 3-37)

1) Remove the cam gear. (Refer to 3-30)
2) Disengage the claw ❶, then remove the tension regulator arm ❷.
3) Remove the end of the spring ❸ from the S take-up arm ❹.
4) Disengage the claw ❺, then pull out S take-up arm ❹.

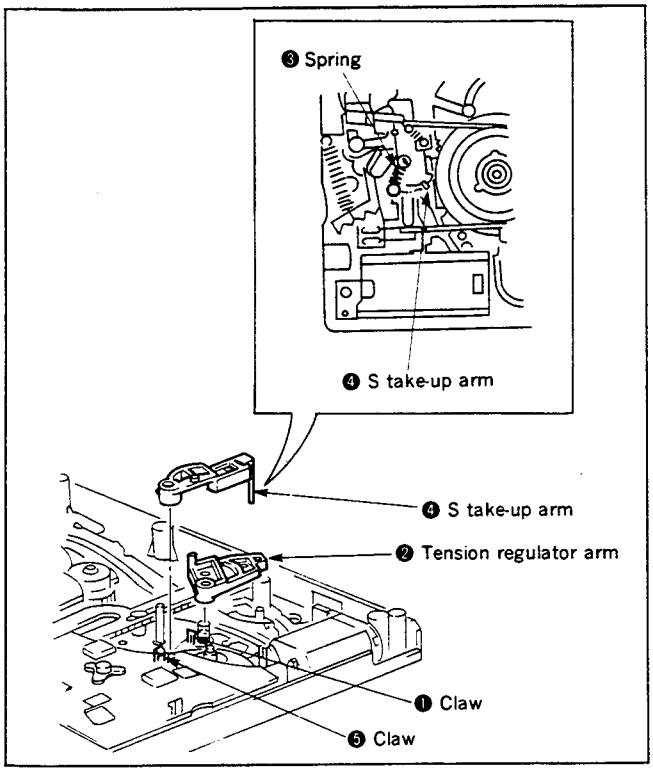

Fig. 3-37.

3-32. MODE SLIDE PLATE, RVS RELAY GEAR (Fig. 3-38)

1) Remove the RKB cam gear. (Refer to 3-25.)
2) Remove the cam gear. (Refer to 3-30.)
3) Remove the two washers 2 ❶.
4) Turn the CAP brake ❷ in the direction of the arrow, then pull out mode slide plate ❸.
5) Pull out the RVS relay gear ❹.

[Precautions on remounting]

- ○ Match up the hole ❺ on the RVS relay gear ❹ with hole ❺ in the chassis.
- ○ Match up the holes ❻ on the mode slide plate ❸ with holes ❻ in the chassis.
- ○ Apply 1/2 drop of lubricant to the shaft ❼.

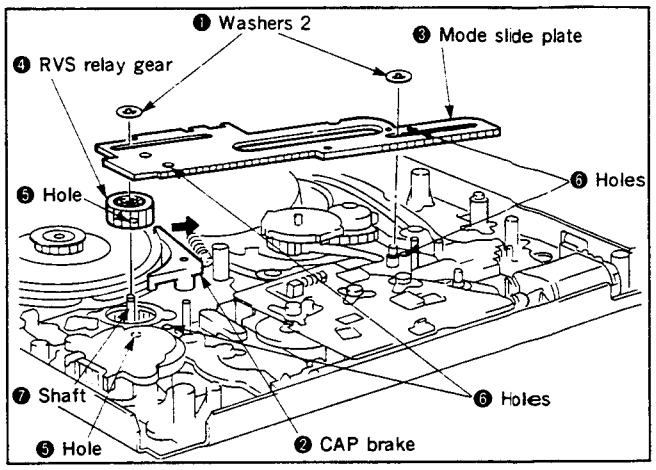

Fig. 3-38.

3-33. BRAKE ARM, BRAKE SLIDE PLATE (Fig. 3-39)

1) Remove the sub-chassis. (Refer to 3-26.)
2) Remove the cam gear. (Refer to 3-30.)
3) Disengage the claw ❶, then pull out the brake arm ❷.
4) Disengage the two claws ❸, then pull out the brake slide plate ❹.

[Precautions on remounting]

- ○ Insert the shaft ❺ into hole ❻.

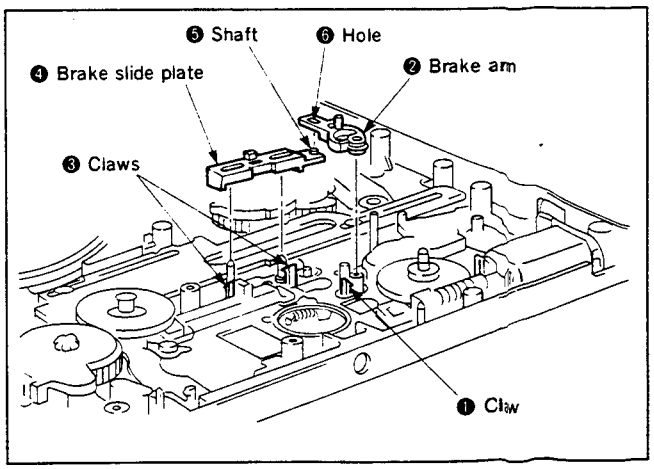

Fig. 3-39.

3-34. RIGHT SHUTTLE, RIGHT LOADING GEAR ASSY'S (Fig. 3-40)

1) Remove the mode slide plate. (Refer to 3-32.)
2) Remove the plastic slider ❶, then pull out the right shuttle ass'y ❷.
3) Pull out the right loading gear ass'y ❸.

[Precautions on remounting]

- ○ Match up the ▲ mark on the right loading gear ass'y ❸ with the ▲ mark on the left loading gear ass'y ❹ as shown in Fig. A below.
- ○ Apply 1/2 drop of lubricant to the shaft ❺.
- ○ Do not hold on to the arm when pressing on the right loading gear ❸.
- ○ Clean the section of the right shuttle ass'y ❷ where the tape is attached.

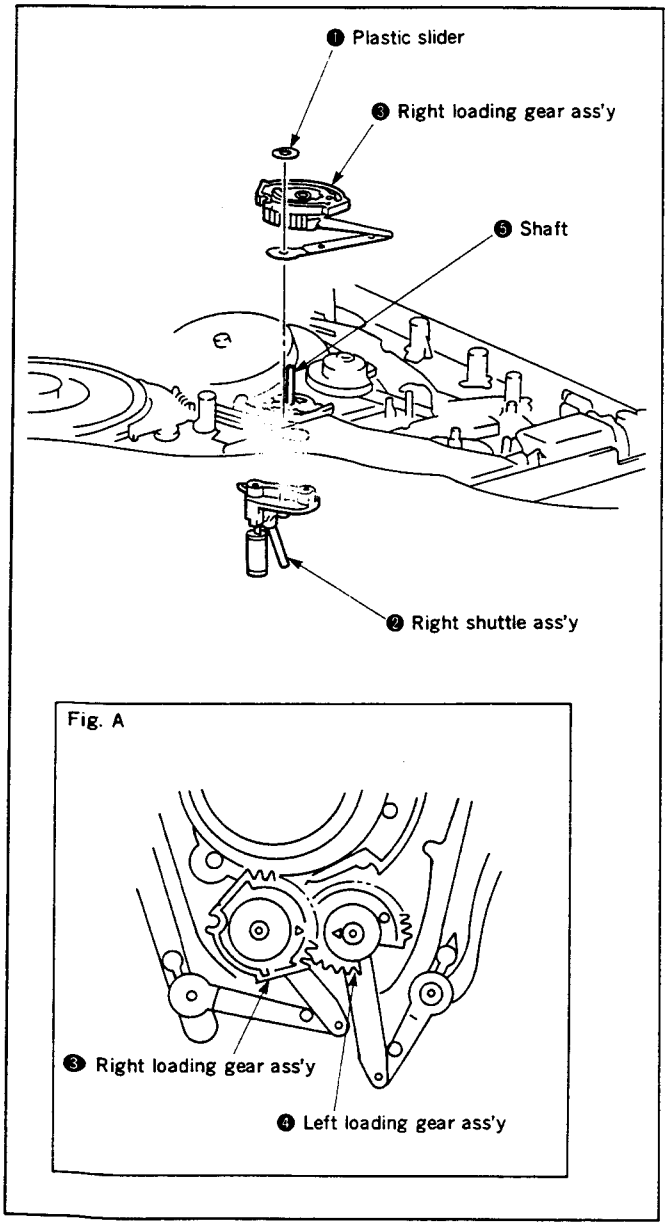

Fig. 3-40.

3-35. LEFT SHUTTLE ASS'Y, LEFT LOADING GEAR ASS'Y (Fig. 3-41)

1) Remove the right shuttle ass'y and right loading gear ass'y. (Refer to 3-34.)
2) Remove the plastic slider ❶, then pull out the left shuttle ass'y ❷.
3) Remove washer 2 ❸, then pull out the left loading gear ass'y ❹.

[Precautions on remounting]

- ○ Apply 1/2 drop of lubricant to shaft ❺.
- ○ The tension regulator arm ass'y ❻ and left shuttle ass'y ❷ must be positioned as shown in Fig. A below.
- ○ Do not hold on to the arm of the left loading gear ass'y ❹ when the left loading gear ass'y ❹ is pressed.
- ○ Clean the section of the felt shuttle ass'y ❷ where the tape is attached.

[Adjustments after replacement]

- ○ Perform tape path adjustments as described in 4-1.

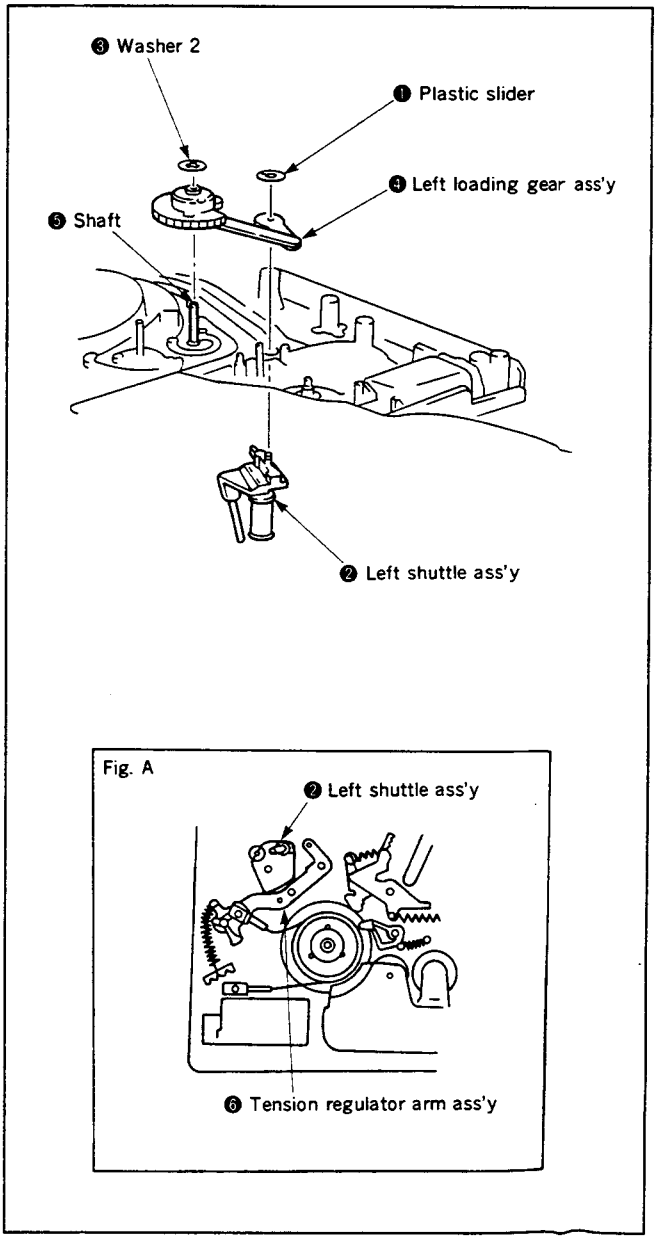

Fig. 3-41.

3-36. C-ROLLER ARM ASS'Y, C-ROLLER RELEASE LEVER (Fig. 3-42)

1) Disengage the claw ❶, then pull out the C-roller arm ass'y ❷.
2) Unhook the end of the spring ❸ from the chassis.
3) Disengage the two claws ❹, then pull out the C-roller release lever ❺.

[Precautions on remounting]

○ Mount C-roller arm ass'y ❷ so that the hole ❻ on the C-roller arm ass'y ❷ fits into the boss ❼ on the C-roller release lever ❺.

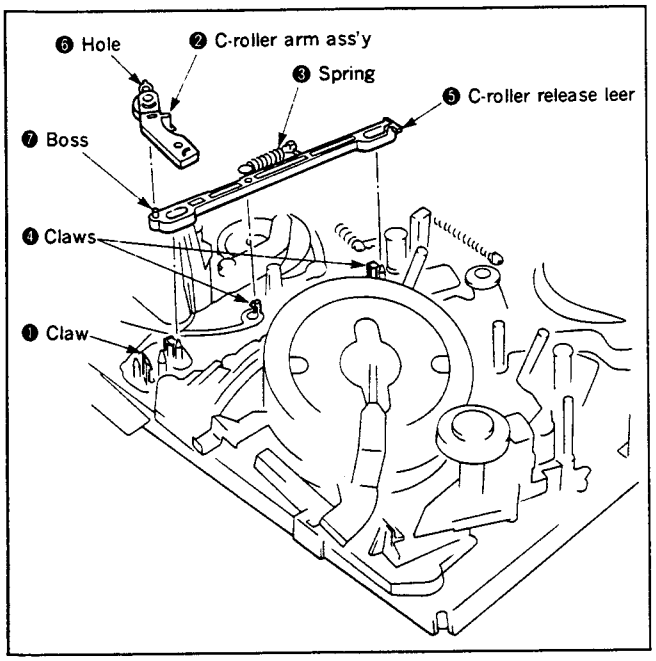

Fig. 3-42.

4. ADJUSTMENT

4-1. TAPE PATH ADJUSTMENT

The "Tape path" refers to the route of the tape from the supply reel disk to the take-up reel disc via the video heads. Each component part of the tape transport system, particularly the surface of parts which make direct contact with the tape must always be kept clean, free of dust, oil, scratches and so forth.

The tape path system is factory preadjusted. when parts of the tape transport system are replaced, be sure to make the required adjustments as precisely as possible in order to ensure stable tape transport.

4-1-1. Tension regulator position/tension adjustment (Fig. 4-1.)

Purpose: Stabilizes contact of the video head and the tape to maintain the tension of the tape so that it feeds at a constant level.

- **Position adjustment**

Mode	Threading is completed without a cassette loaded. (Refer to section 1-2.)
Adjustment locations	Tension band holder

[Adjustment method]

1) Allow the unit to go through the threading procedure without a cassette loaded.
2) Set the VTR unit to playback, then turn the tension band adjuster lever so that the gap between guide No. 0 and tension arm is within 4.5±0.4mm. *(Set the unit to playback without a cassette loaded.)
3) After adjustment, go through the loading procedure once more without a cassette loaded, then check the position of the tension arm.

- **Tension adjustment**

Mode	Playback
Measuring instrument/tool	Torque cassette
Adjustment locations	Position for hooking the tension spring
Specification	28 to 34 g•cm

[Adjustment method]

1) Playback the torque cassette.
2) Check that the center value deviation reading on the torque cassette meets with the standards.
3) When the reading is higher than the standards: Move the spring toward direction Ⓐ.
   When the reading is less than the standards: Move the spring toward direction Ⓑ.

Note: Move the spring to the tension spring hook position and recheck the tension arm position. If the arm position is misaligned, adjust the position and tension of the tension arm.

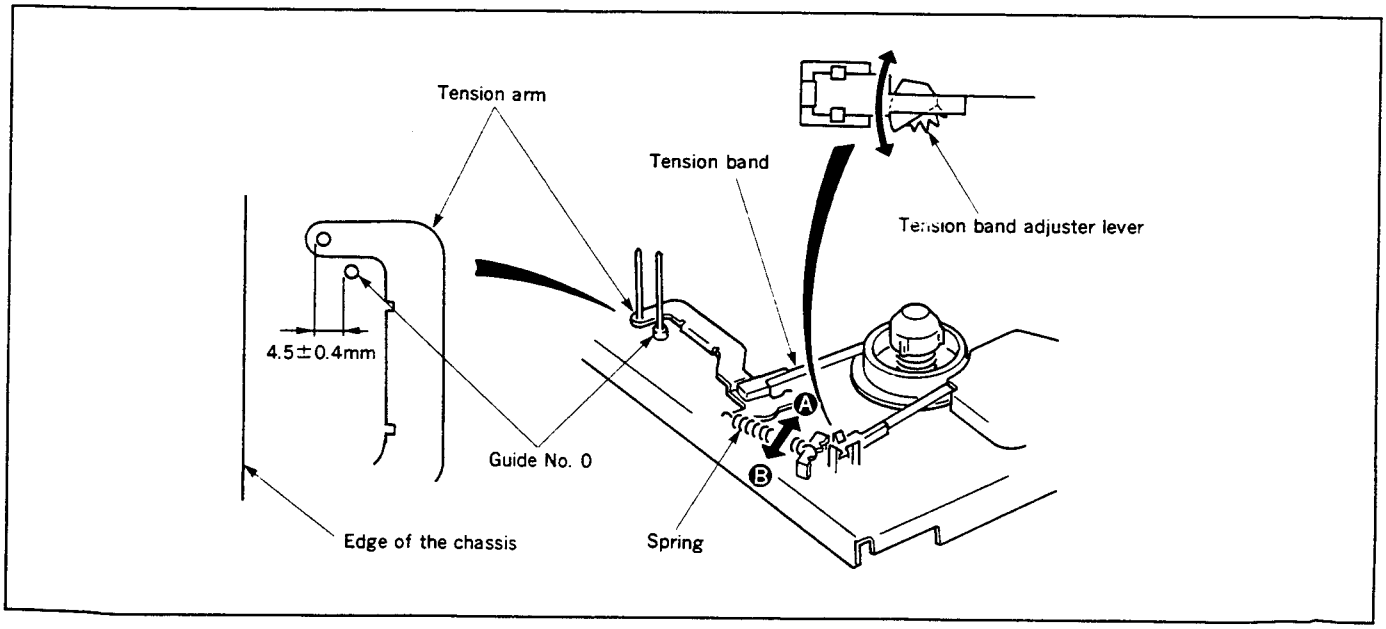

Fig. 4-1.

4-1-2. Height adjustment of the guide roller No. 2 (Fig. 4-2)

Mode	Playback
Tool	Blank tape
Adjustment locations	Guide roller height adjuster screw

[Adjustment method]

1) Load a new tape in the unit, then play it back.
2) Make sure that the lower flange of guide roller No. 2 does not curl up.
3) When the tape curls up: Turn the guide roller adjuster screw clockwise.
   When the tape does not fit into the lower flange: Turn the guide roller adjuster screw counter-clockwise.
4) After the above check, separate the tension arm from the tape, then re-attach it slowly. At this time, check if the tape curls up at the lower flange of the guide roller No. 2 and if the curl disappears within 2 seconds.
5) If curl does not disappear in two seconds: Turn the adjuster screw clockwise.
   If the tape does not curl up: Turn the adjuster screw counter-clockwise.

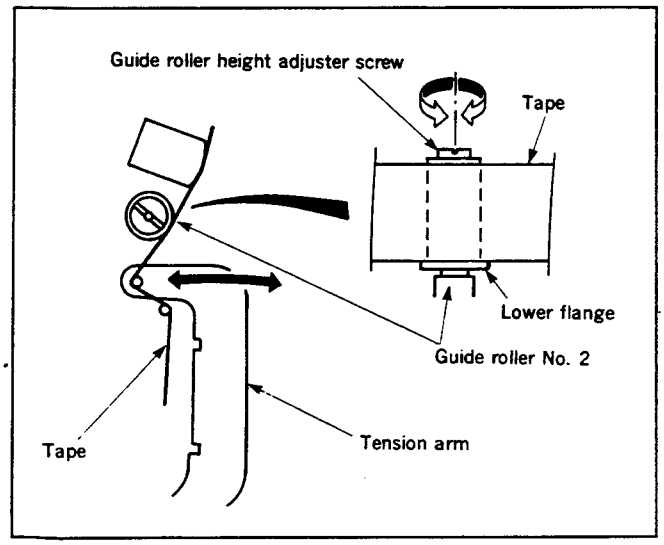

Fig. 4-2.

4-1-3. Height adjustment of guide roller No. 7 and the RVS arm (Fig. 4-3.)

Mode	Playback
Tool	Blank tape
Adjustment locations	Height adjuster nut

[Adjustment method]

1) Load the tape into the VTR and play it back, then adjust the height of the guide roller No. 7 so that the tape runs along the lower flange of guide roller No. 7.
2) If the guide roller is too low: Turn the height adjuster nut counter-clockwise.
   If the guide roller is too high: Turn the height adjuster nut clockwise.
3) Run the tape in REV, then adjust the height of the RVS arm so that the tape runs along guide roller No. 7.
4) If the tape gets caught in the upper flange of guide roller No. 7: Turn the RVS arm height adjuster nut clockwise.
5) If the tape catches on the lower flange of guide roller No. 7 : Turn the RVS arm height adjuster nut counter-clockwise.

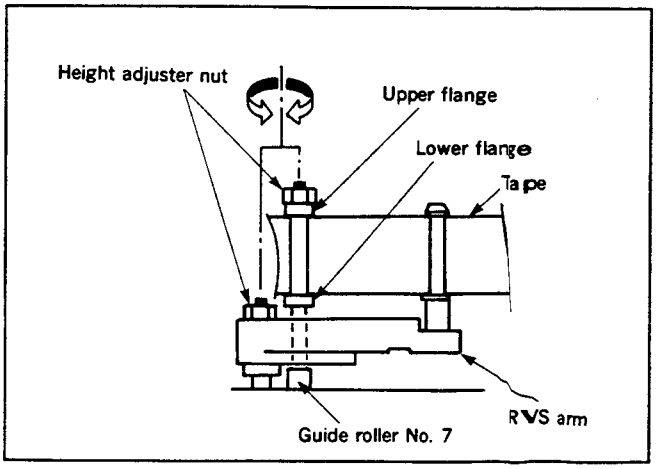

Fig. 4-3.

4-1-4. Height adjustment of guide rollers No. 3 and No. 6 (Fig. 4-4)

Mode	Playback
Signal	Hi-Fi alignment tape (Hi-Fi 400Hz)
Measuring instrument	Oscilloscope
Measuring point	CH-1 : Connector PB RF pin for RF PC board check. CH-2 : Connector RF SW P pin for RF PC board check.
Adjustment locations	Guide roller height adjuster screw.

[Adjustment method]

1) Tracking (playback) : Turn off the auto tracking, then press the tracking buttons ▽ and △ simultaneously to set the tracking at the center position.
   (If adjustment is made after the drum is replaced, the tracking must be set at the max. Rf output position.)
2) Height adjuster screw: Even out the RF output waveforms.
3) Press the tracking buttons (playback), ▽ and △ alternately.
4) Check that RF output drops the same amount at the front and rear edges.

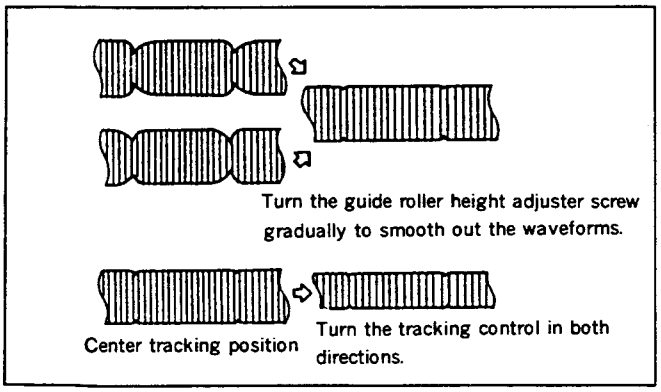

Fig. 4-4.

4-1-5. ACE head ass'y adjustment (rough adjustment) (Figs. 4-5 and 4-6)

Purpose : Allows the tape to make even contact with the head for recording and playback of the specified track.

Mode	Playback
Tool	Blank tape
Adjustment locations	Height adjuster nut, tilt adjuster screw

[Adjustment method]

1) Mount the ACE head ass'y. At this time, adjust the height so that the height of guide flange No. 7 matches the level of the lower edge of the control head.
2) Remove the adjustment tool and load a new tape, then set the unit for playback.
3) Check that the tape does not curl or raise up noticeably near the ACE head.
4) If the yape curls up or rarises noticeably, readjust the tilt adjuster screw, the azimuth adjuster screw and the height adjuster nut.
   (The height of the ACE head should be adjusted so that the lower edge of the tape is approx. 0.1 to 0.15 mm from the control head.)
5) Perform precision adjustment.

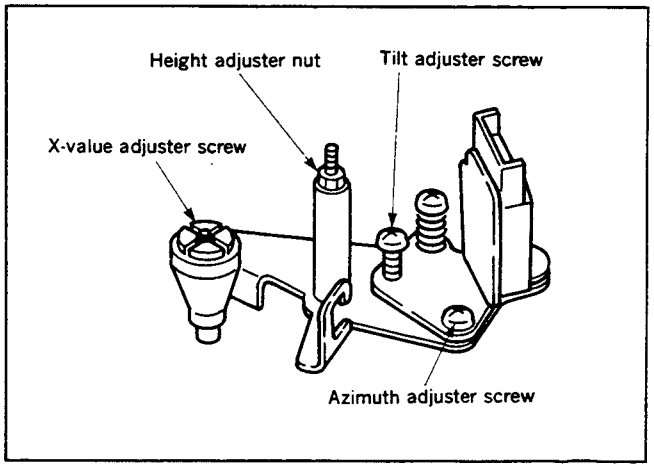

Fig. 4-5.

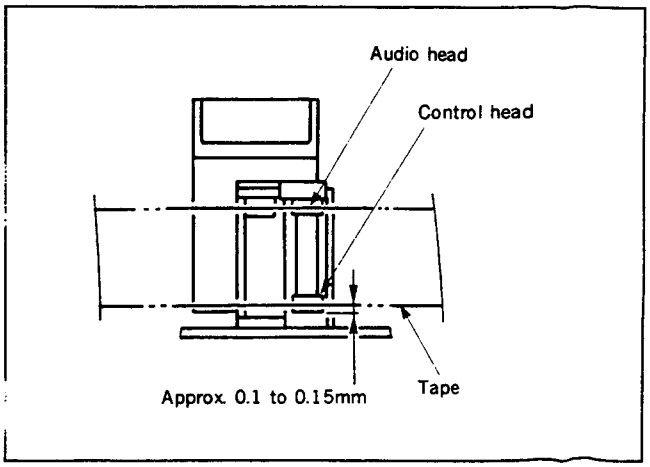

Fig. 4-6.

4-1-6. ACE head assembly adjustment (precision adjustment)

Mode	Playback
Signal	Alignment tape (JVC-MH-1 1KHz)
Measuring instrument	Oscilloscope
Measuring point	Audio output terminal
Adjustment locations	Azimuth adjuster screw Height adjuster nut Tilt adjuster screw

[Adjustment method]

1) Adjust the tilt adjuster screw in the FWD or REV mode so that the lower flange of guide No. 7 does not curl up or raise.
2) Alternately adjust the azimuth adjuster screw, the height adjuster nut, and the tilt adjuster screw to maintain even audio output at maximum with minimum deviation.

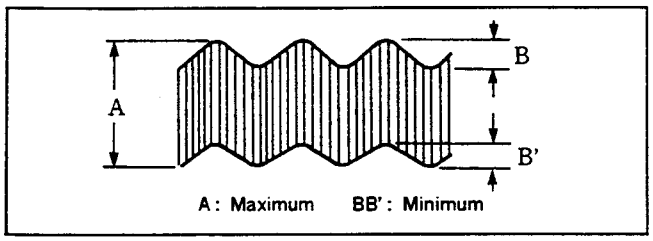

Fig. 4-7.

4-1-7. X-value adjustment

Purpose: To obtain compatibility with other VTR.

Precaution: Be sure to perform the preset tracking adjustment before perform this adjustment. (Refer to the Service Guide.)
Turn off the auto tracking and set the VTR for manual tracking mode.

Mode	Playbadk
Signal	Hi-Fi alignment tape (Hi-Fi 400Hz), alignment tape (JVC-MH-1)
Measuring instrument	Oscilloscope
Measuring point	CH-1 : Connector PB RF pin for RF PC board check. CH-2 : Connector RF SW P pin for RF PC board check. (Check with the CHA head)
Adjustment locations	X-value adjuster screw

[Adjustment method]

- **Adjustment by Hi-Fi alignment tape**
  When the tracking is set at the center position (by pressing the [▽] and [△] keys simultaneously), adjust the RF output to maximum.

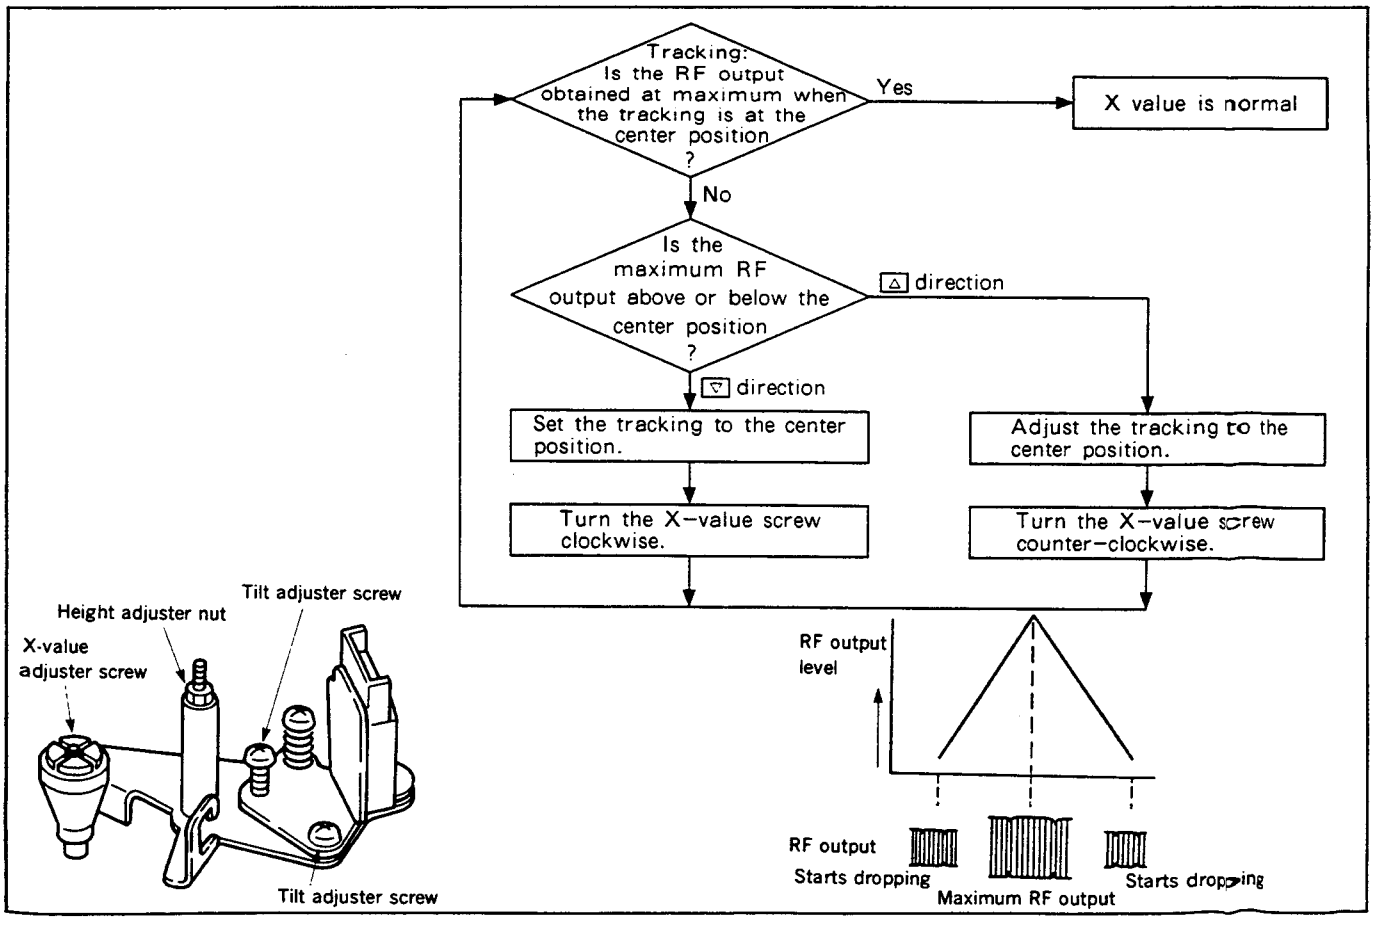

Fig. 4-8.

- **Adjustment by Alignment tape (JVC-MH-1)**
  Adjust the X-value adjuster screw so that maximum RF output is obtained and also that the RF output drops to the same position on pressing the respective [▽] and [△] buttons while the tracking is set at the center position.

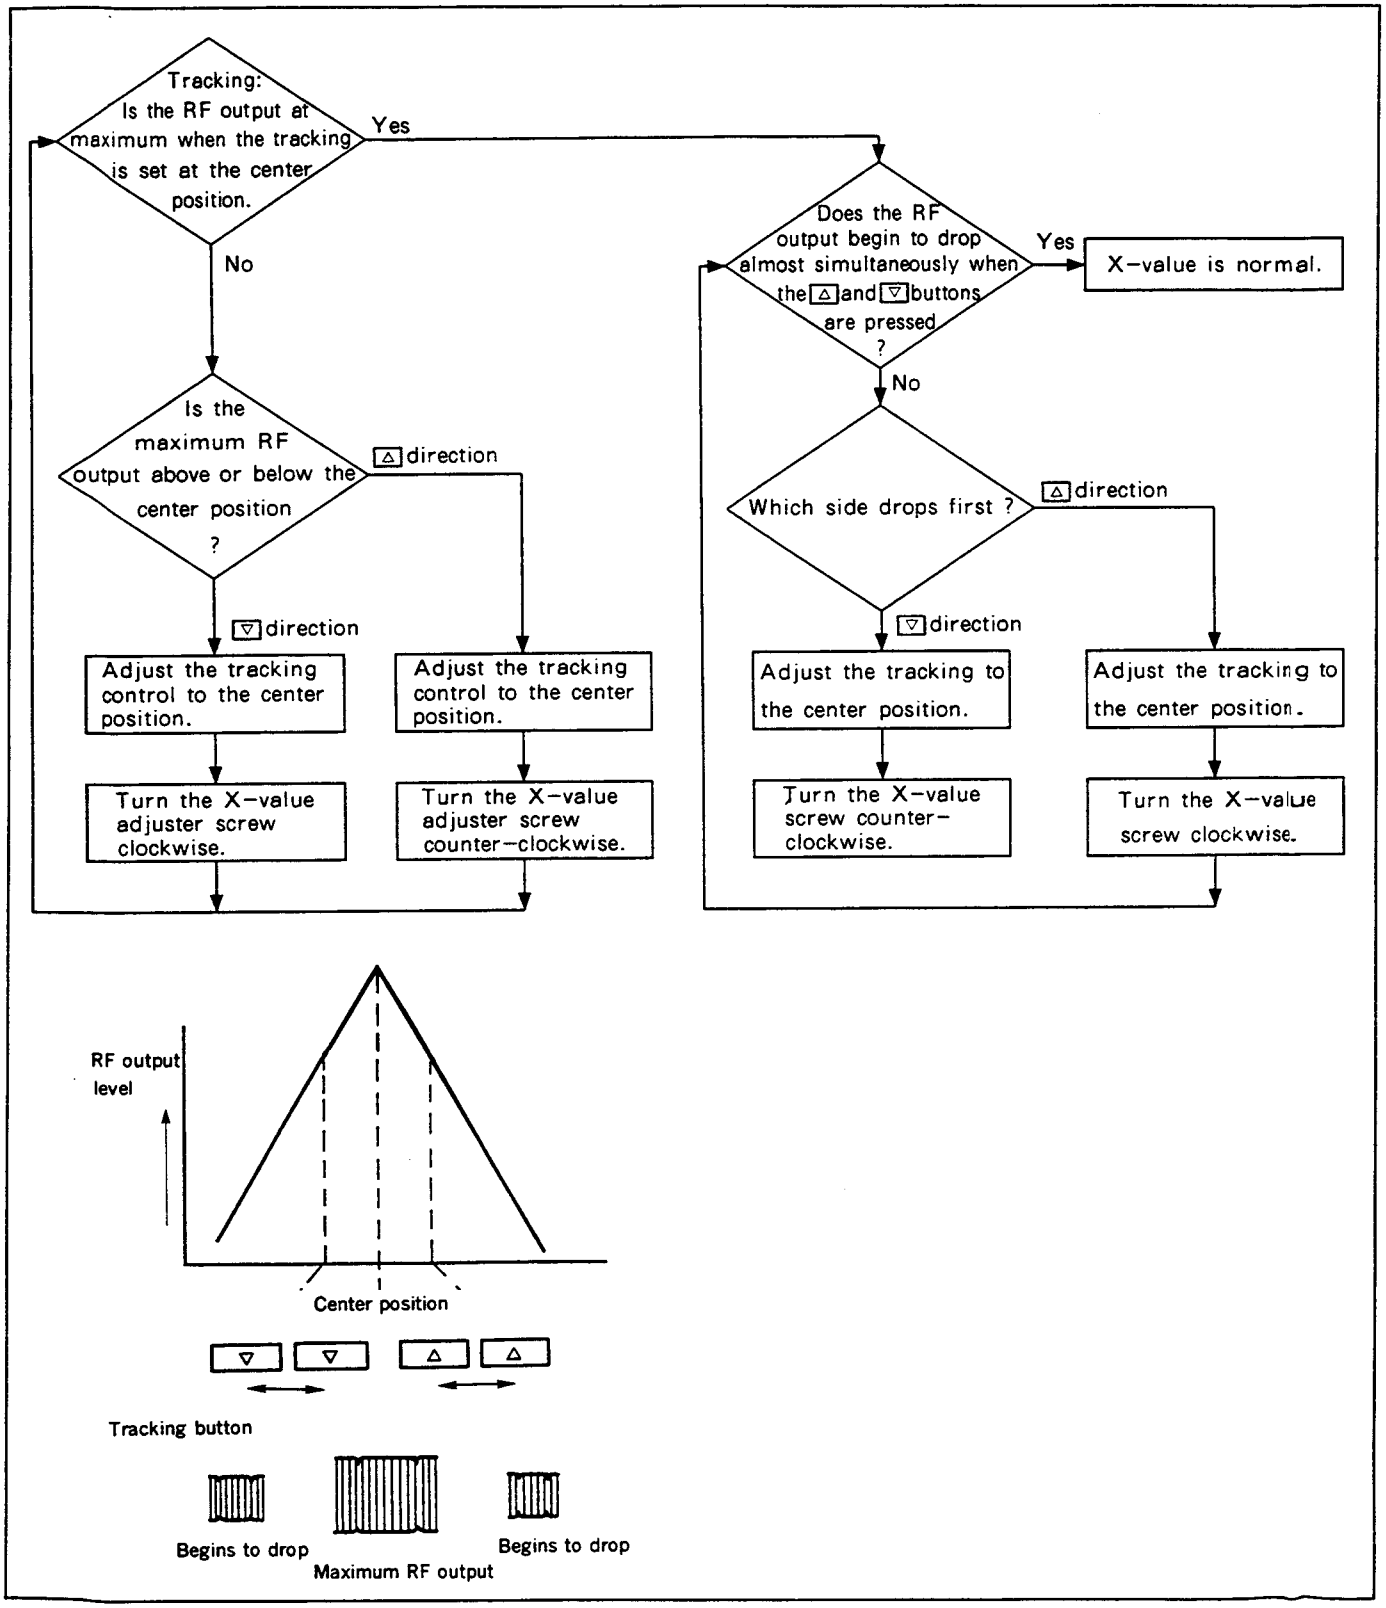

Fig. 4-9.

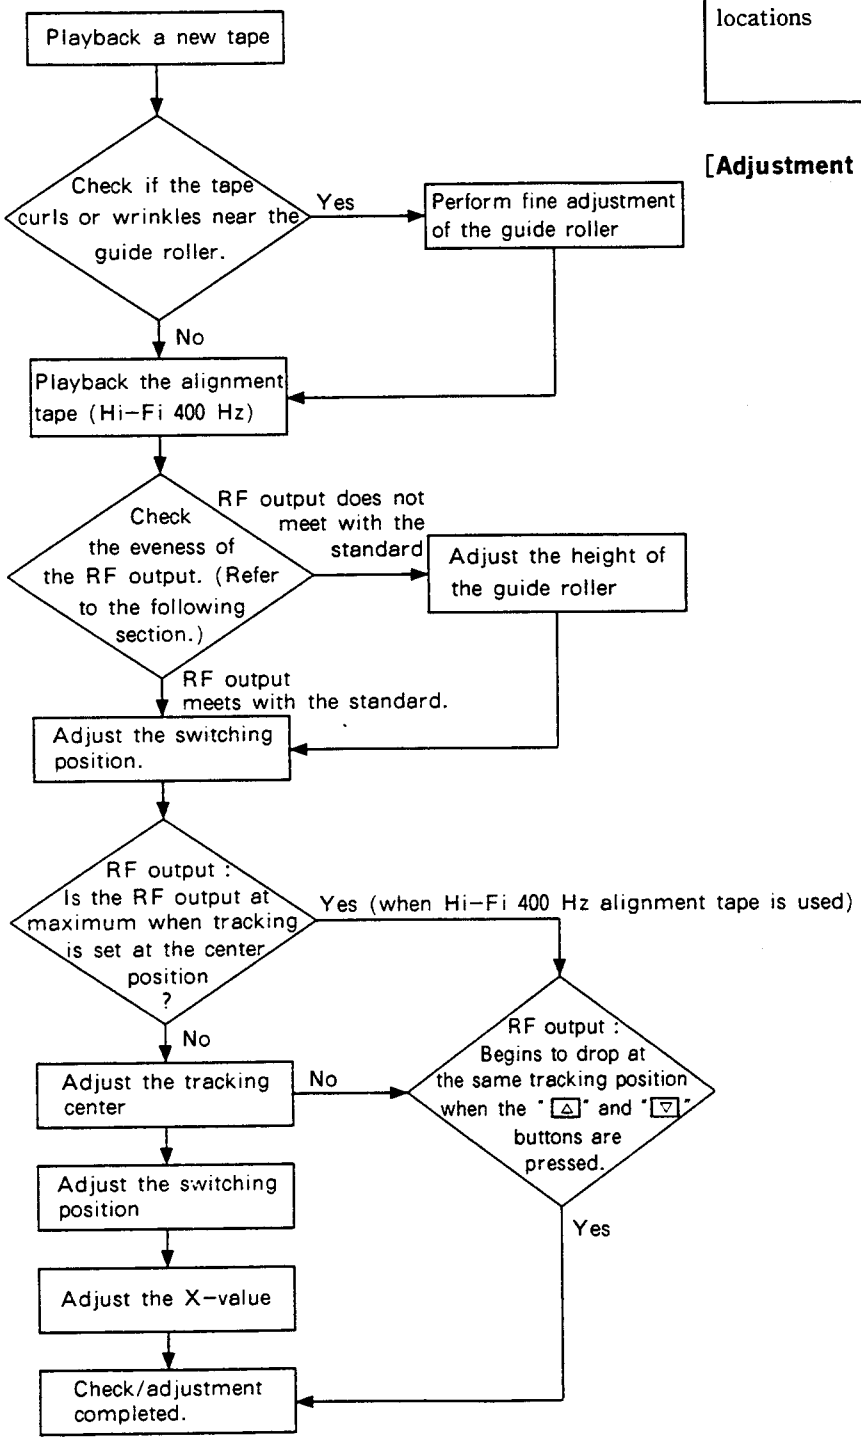
4-1-8. Adjustments after replacing the drum (video head)

Purpose : Co-relative height, X-value and other factors of the drum will deviate from those of the guide roller. If the drum is replaced properly, these deviations are extremely small.

Precaution : Turn off the auto tracking and set the manual tracking mode.

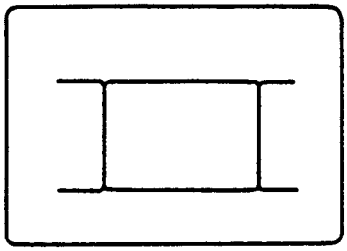
Mode	Playback
Signal	Alignment tape (JVC-MH-1), blank tape
Measuring instrument	Oscilloscope
Measuring point	CH-1 : Connector PB RF pin for RF PC board check. CH-2 : Connector RF SW P pin for RF PC board check.
Adjustment locations	Guide roller (refer to 4-1-5.) Switching position, Tracking preset, SP delay mono-multi, X-value (refer to 4-1-8) } (Refer to the Service Guide)

[Adjustment method]

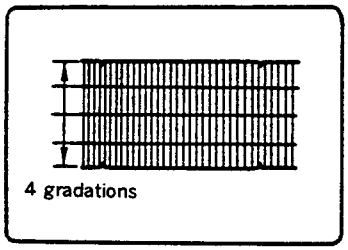


[Checking the eveness and fluctuation of the RF output]

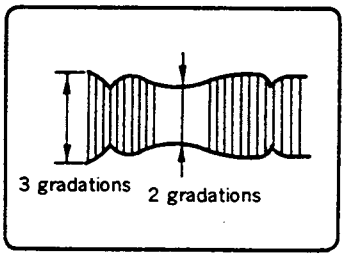
1) Set the RF output to the maximum level using the tracking buttons.



2) Perform fine adjustment of the voltage level range of the oscilloscope, then adjust the RF output deviation to within 4 gradations.



3) Press the tracking buttons and adjust the maximum amplitude of the RF output to within 3 gradations.
4) At this time, check if the minimum amplitude is more than 2 gradations.



5) Check that the RF output fluctuation between minimum and maximum levels is within 13%.

4-1-9. Checking the tension and torque

Purpose: To check that the tension, torque and compression force of the tape take-up section and mobile sections to ensure smooth tape run and achieve standard VTR performance.
If the tape transport is not smooth or problems occur in relation to the tape transport speed, perform the following check.

Mode	Each operation mode without loading a cassette tape. (Refer to section 1-3.)
Measuring instrument	Torque gauge, Torque gauge adapter

Item	VTR operation mode	Reel to be measured	Measurement value
Main brake torque	Stop	Supply and take-up reels	170g•cm or more
Review torque	Review	Supply reel	180±30g•cm (using the torque cassette)
Take-up torque	Playback	Take-up reel	80 to 140g•cm (using torque cassette)
Back tension torque	Rewind	Take-up reel	4 to 25 g•cm

[Check method]
Measure the torque using the torque gauge and torque gauge adaptor with the torque gauge fixed.
